

# ENQUIRE WITHIN

UPON

EVERYTHING.

Whether you wish to model a flower in wax, to ornament a vase by the art of  
toothmanie, to serve up a relish for breakfast or for supper, to supply a delicious entree  
for the dinner table, to plan a dinner for a large party or a small one, to cure a head-  
ache, to get married, to lury a relative, to establish acquaintances according to the rules  
of etiquette, whatever you may wish to do, make of it your privilege, and therefore, upon  
relation to the necessities of domestic life, I shall be happy to assist you, and therefore, upon  
all such occasions I hope you will not fail to 'Enquire Within' — Extract from the First  
Advertisement to the Work

ENQUIRERS ARE REFERRRD TO THE INDEX.

SEVENTIETH THOUSAND.

## PREFACE.

---

IF THERE be any among my readers, who, having turned over the pages of "ENQUIRE WITHIN," have hastily pronounced them to be confused and ill-arranged; let them at once refer to THE INDEX, or for ever hold their peace.

The INDEX is, to the vast congregation of useful hints and receipts that fill the boundary of this volume, like the DIRECTORY to the great aggregation of houses and people in London.

No one, being a stranger to London, would run about asking for "Mr. SMITH." But, remembering the Christian name, and the profession of the individual wanted, would turn to the DIRECTORY, and trace him out.

Like a house, every paragraph in "ENQUIRE WITHIN," has its number,—and the INDEX is the DIRECTORY which will explain what Facts, Hints, and Instructions *inhabit* that number.

For, if it be not a misnomer, we are prompted to say, that "ENQUIRE WITHIN" is *peopled* with thousands of ladies and gentlemen, who have approved of the plan of the work, and contributed something to its store of useful information. There they are, waiting to be questioned, and ready to reply. Only a short time ago, the facts and information, now assuming the conventional forms of printing types, were active thoughts in the minds of many people. Their fingers traced those thoughts upon the page, for the benefit of whomsoever might need information. We must not separate the thought from the mind which gave it birth; we must not look upon these writings as we should upon the traces left by the snail upon the green leaf, having neither form nor meaning. Behind each page some one lives to answer for the correctness of the information imparted, just as certainly as where, in the window of a dwelling, you

see a paper directing you to "ENQUIRE WITHIN," some one is there to answer you.

Old Dr. KITCHENER lives at No. 41; Mrs. HITCHING lives at 161; Mrs. CHILD lives at 203; Dr. BREWER lives at 291; Dr. STENHOUSE at 320; Dr. BURGESS at 324; Dr. ERASMUS WILSON at 399; Dr. SOUTHWOOD SMITH at 401; Dr. BLAIR at 446; M. SOYER at 765; Dr. BABINGTON at 1287; Dr. CLARKE at 1291; Dr. SCOTT, at 1296; the gentleman who lives at 343, has requested us (because of the delicacy of the communication), not to publish his name; a DOCTOR lives at 906; a GARDENER at 1021; a SCHOOLMASTER at 1323; a DANCING MASTER at 1678; an ARTIST at 1851; a NATURALIST at 1925; a MODELLER at 1931; a COOK at 1972; a PHILANTHROPIST at 2006; a LAWYER at 2047; A SURGEON at 2186; a CHESS PLAYER at 2354; a CHEMIST at 2387; a BREWER at 2559; and so on.

Well! there they live—always at home—knock at their doors—ENQUIRE WITHIN, NO FEES TO PAY!!

We have taken so much care in selecting our information, and have been aided by so many kind friends in the production of our volume, that we cannot turn to any page without at once being reminded of the GENEROUS FRIEND WHO ABIDES THERE.

To some extent, though in a far less degree, we have been indebted to the authors of the following useful books. In the first place we must express our chief obligations to "Dr. KITCHENER'S COOK'S ORACLE," to "THE COOK," in "*Houlston and Wright's Industrial Library*;" to "THE SHOPKEEPER'S GUIDE," to "Mrs. RUNDALL'S COOKERY," to "HOME TRUTHS, FOR HOME PEACE," and also to "THE FAMILY FRIEND," "TREASURES IN NEEDLEWORK," "THE PRACTICAL HOUSEWIFE," and to "THE FAMILY TREASURY." We now invite the thousands who may "ENQUIRE WITHIN" to our future monthly INTERVIEW, wherein we will endeavour to supply whatever ENQUIRERS may not find by ENQUIRING WITHIN. Our INTERVIEWS will be varied, genial, and entirely original in their arrangement. "*The pleasure of your company is earnestly solicited.*"

## PREFACE TO THE SEVENTH EDITION

---

THE Author of "ENQUIRE WITHIN" owes his best thanks to the public for the great favour with which this Volume has been received. In little more than two years, successive Editions have been called for, amounting to the extraordinary number of SEVENTY THOUSAND COPIES. "I have sold," writes a country Bookseller, "as many copies of 'ENQUIRE WITHIN' as I did of 'UNCLE TOM'S CABIN.'"

This great success has been gained without any extraordinary effort; there has been little advertising, no puffing; but "ENQUIRE WITHIN" has worked its way in public favour entirely *by its own merits*.

The Author, therefore, feels encouraged to announce, that since the first publication of this Volume, he has produced some others of a kindred nature, to which he respectfully invites the reader's attention, by a mere enumeration of their titles:—

1. "THE HOUSEWIFE'S REASON WHY," affording to the manager of domestic affairs intelligible Reasons for the various duties she has to superintend or to perform.

2. "THE REASON WHY" (GENERAL SCIENCE), a Collection of many Hundreds of Reasons for things which, though generally received, are imperfectly understood.

3. "THE INTERVIEW," a Companion to "ENQUIRE WITHIN," containing additional Information upon Domestic Matters.

4. "THE CORNER CUPBOARD," also a Companion Volume, containing Domestic Information not included in the Contents of the previous Works, illustrated with numerous Needlework Designs, and instructions for the Management of the Aquarium.

5. "NOTICES TO CORRESPONDENTS," a Work full of curious matters of fact, culled from the Editorial Answers to the Correspondents of all the leading Newspapers and Magazines.

These Works are uniform in size and price with "ENQUIRE WITHIN," forming an excellent FAMILY LIBRARY.

The first of this List, as its title implies, is eminently adapted for the Housewife; the second for intelligent Sons and Daughters; the third and fourth for all the Members of a Family; and the fifth for the elder Son or Father, curious in matters of history and facts, the records of many sports, and the discussion of opinions upon events and theories of every conceivable nature.

*London, November, 1857.*

# TABLE,

SHOWING THE CONTENTS OF THE SEPARATE NUMBERS OF "ENQUIRE WITHIN."

---

<i>Paragraphs</i>	1 to 161	<i>are contained in</i>	No. I.
<i>Paragraphs</i>	162 to 278	<i>are contained in</i>	No. II.
<i>Paragraphs</i>	279 to 473	<i>are contained in</i>	No. III.
<i>Paragraphs</i>	474 to 863	<i>are contained in</i>	No. IV.
<i>Paragraphs</i>	864 to 1322	<i>are contained in</i>	No. V.
<i>Paragraphs</i>	1323 to 1850	<i>are contained in</i>	No. VI.
<i>Paragraphs</i>	1851 to 2100	<i>are contained in</i>	No. VII.
<i>Paragraphs</i>	2101 to 2248	<i>are contained in</i>	No. VIII.
<i>Paragraphs</i>	2249 to 2456	<i>are contained in</i>	No. IX.
<i>Paragraphs</i>	2457 to 2762	<i>are contained in</i>	No. X.
<i>Paragraphs</i>	2762 to 3031	<i>are contained in</i>	No. XI.
THE INDEX AND PREFATORY MATTER occupy			No. XII.

(Nos. 11 and 12 are issued together as a Double Number.)

.

---

By the aid of the above Table, persons having the numbers of "ENQUIRE WITHIN," unbound, can easily refer to the contents; or persons wishing to disseminate special information upon the subjects treated of in those numbers, may at all times obtain them separately, if they desire to do so.

# ENQUIRE WITHIN

UPON

## EVERYTHING.

1. CHOICE OF ARTICLES OF FOOD.—Nothing is more important in the affairs of housekeeping than the choice of wholesome food. We have been amused by a conundrum which is as follows:—"A man went to market and bought *two* fish. When he reached home he found they were the same as when he had bought them; yet there were *three*!" How was this? The answer is—"He bought two mackerel, and one *smelt*!" Those who envy him his bargain need not care about the following rules; but to others they will be valuable:—

2. MACKEREL must be perfectly fresh, or it is a very indifferent fish; it will neither bear carriage, nor being kept many hours out of the water. The firmness of the flesh, and the clearness of the eyes, must be the criterion of fresh mackerel, as they are of all other fish. (See 65.)

3. TURBOT, and all flat white fish, are rigid and firm when fresh; the under side should be of a rich cream colour. When out of season, or too long kept, this becomes a bluish white, and the flesh soft and flaccid. A clear bright eye in fish is also a mark of being fresh and good.

4. COD is known to be fresh by the rigidity of the muscles (or flesh); the redness of the gills, and clearness of the eyes. Crimping much improves this fish.

5. SALMON.—The flavour and ex-

cellence of this fish depends upon its freshness, and the shortness of time since it was caught; for no method can completely preserve the delicate flavour it has when just taken out of the water. A great deal of what is brought to London has been packed in ice, and comes from the Scotch and Irish rivers, and though quite fresh, is not quite equal to Thames salmon.

6. HERRINGS can only be eaten when very fresh, and, like mackerel, will not remain good many hours after they are caught.

7. FRESH-WATER FISH.—The remarks as to firmness and clear fresh eyes apply to this variety of fish, of which there are carp, tench, pike, perch, &c.

8. LOBSTERS, recently caught, have always some remains of muscular action in the claws, which may be excited by pressing the eyes with the finger; when this cannot be produced, the lobster must have been too long kept. When boiled, the tail preserves its elasticity if fresh, but loses it as soon as it becomes stale. The heaviest lobsters are the best; when light they are watery and poor. Hen lobsters may generally be known by the spawn, or by the breadth of the "flap."

9. CRAB AND CRAYFISH must be chosen by observations similar to those given above in the choice of lobsters. Crabs have an agreeable smell when fresh.

**30. CASTOR OIL POMADE.**—Castor oil, four ounces; prepared lard, two ounces; white wax, two drachms; bergamot, two drachms; oil of lavender, twenty drops. Melt the fat together, and on cooling add the scents, and stir till cold. Cost of castor oil, 10d. per pound; lard, 11d.; white wax, 2s. 2d. per pound; bergamot, 1s. an ounce.

**31. MUTTON PIE.**—The following is a capital family dish:—Cut mutton into pieces about two inches square, and half an inch thick; mix pepper, pounded allspice, and salt together, dip the pieces in this; sprinkle stale bread crumbs at the bottom of the dish; lay in the pieces, strewing the crumbs over each layer; put a piece of butter the size of a hen's egg at the top; add a wineglassful of water, and cover in, and bake in a moderate oven rather better than an hour. Take an onion, chop fine; a faggot of herbs; half an anchovy; and add to it a little beef stock, or gravy; simmer for a quarter of an hour; raise the crust at one end, and pour in the liquor—not the thick part. (See 135.)

**32. MOTHS (to get rid of them).**—1. Procure shavings of cedar-wood, and enclose in muslin bags, which should be distributed freely among the clothes. —2. Procure shavings of camphor-wood, and enclose in bags. —3. Sprinkle pimento (allspice) berries among the clothes. —4. Sprinkle the clothes with the seeds of the musk plant. —5. To destroy the eggs when deposited in woollen cloth, &c., use a solution of acetate of potash in spirits of rosemary, fifteen grains to the pint.

**33. PAINS IN THE HEAD AND FACE.**—A friend assures us that he was cured of a severe attack of tic doloureux by the following simple remedy:—Take half a pint of rose water, add two teaspoonfuls of white vinegar, to form a lotion. Apply it to the part affected three or four times a day. It requires fresh linen and lotion each application; this will, in two or three days, gradually take the pain away.

The above receipt I feel desirous of being made known to the public, as I have before mentioned the relief I have experienced, and others, whose names I could give. The last remark is our friend's own. We doubt the cure of real tic doloureux by these means; but in many cases of nervous pains the above would be useful, and may easily be tried.

**34. COLD CREAM.**—No. 1. Oil of almonds, one pound; white wax, four ounces. Melt together gently in an earthen vessel, and when nearly cold stir in gradually twelve ounces of rose-water. —No. 2. White wax and spermaceti, of each half an ounce; oil of almonds, four ounces; orange flower water, two ounces. Mix as directed for No. 1. The wholesale price of almond oil is 1s. 6d. per pound; white wax, 2s. 2d. per pound; spermaceti, 2s. per pound; rose and orange flower waters, 6d. to 1s. per pint.

**35. NIGHT LIGHTS.**—Field's and Child's night lights are generally known and are easily obtainable. But under circumstances where they cannot be procured, the waste of candles may be thus applied. Make a *fine* cotton, and wax it with white wax. Then cut into the requisite lengths. Melt the grease and pour into pill boxes, previously either fixing the cotton in the centre, or dropping it in just before the grease sets. If a little white wax be melted with the grease, all the better. In this manner, the ends and drippings of candles may be used up. When set to burn, place in a saucer, with sufficient water to rise to the extent of the 16th of an inch around the base of the night-light.

**36. GINGER CAKES.**—To two pounds of flour add three-quarters of a pound of good moist sugar, one ounce best Jamaica ginger well mixed in the flour; have ready three-quarters of a pound of lard, melted, and four eggs well beaten; mix the lard and eggs together, and stir into the flour, which will form a paste; roll out in thin cakes, and bake in a mo-

derately heated oven. Lemon biscuits may be made the same way, by substituting essence of lemon instead of ginger.

37. THE HANDS.—Take a wine-glassful of eau de Cologne, and another of lemon-juice: then scrape two cakes of brown Windsor soap to a powder, and mix well in a mould. When hard, it will be an excellent soap for whitening the hands.

38. TO WHITEN THE NAILS.—Diluted sulphuric acid, two drachms; tincture of myrrh, one drachm; spring water, four ounces; mix. First cleanse with white soap, and then dip the fingers into the mixture. A good hand is one of the chief points of beauty; and these applications are really effective.

39. RHUBARB TO PRESERVE.—Peel one pound of the finest rhubarb, and cut it into pieces of two inches in length, and three-quarters of a pound of white sugar, and the rind and juice of one lemon—the rind to be cut into narrow strips. Put all into a preserving kettle, and simmer gently until the rhubarb is quite soft, take it out carefully with a silver spoon, and put it into jars: then boil the syrup a sufficient time to make it keep well, say one hour, and pour it over the fruit. When cold put a paper soaked in brandy over it, and tie the jars down with a bladder to exclude the air. This is a very good receipt, and should be taken advantage of in the spring.

40. HALF-PAY PUDDING.—An officer's wife is the contributor of the following:—Four ounces of each of the following ingredients, viz., suet, flour, currants, raisins, and bread crumbs; two tablespoonfuls of treacle, half a pint of milk—all of which must be well mixed together, and boiled in a mould, for four hours. To be served up with wine or brandy sauce, if half-pay permit. From two to three hours we find sufficient; it is an excellent substitute for Christmas plum pudding, at the small expense of 6d. or 7d.

41. DR. KITCHENER'S RULES FOR MARKETING.—The best rule for marketing is to pay ready money for every thing, and to deal with the most respectable tradesmen in your neighbourhood. If you leave it to their integrity to supply you with a good article, at the fair market price, you will be supplied with better provisions, and at as reasonable a rate as those *bargain-hunters*, who trot "*around, around, around about*" a market till they are trapped to buy some *unchewable* old poultry, *tough* tup-mutton, *stringy* cow-beef, or *stale* fish, at a very little less than the price of prime and proper food. With *savings* like these they toddle home in triumph, cackling all the way, like a goose that has got *angle-deep* into good-luck. Ah the skill of the most accomplished cook will avail nothing unless she is furnished with prime provisions. The best way to procure these is to deal with shops of established character—you may appear to pay, perhaps, ten *per cent.* more than you would were you to deal with those who pretend to sell cheap, but you would be much more than in that proportion better served. Every trade has its tricks and deceptions; those who follow them can deceive you if they please, and they are too apt to do so, if you provoke the exercise of their over-reaching talent. Challenge them to a game at "*Catch who can,*" by entirely relying on your own judgment, and you will soon find nothing but very long experience can make you equal to the combat of marketing to the utmost advantage. If you think a tradesman has imposed upon you, never use a second word, if the first will not do, nor drop the least hint of an imposition; the only method to induce him to make an abatement is the hope of future favours, pay the demand, and deal with the gentleman no more; but do not let him see that you are displeased, or as soon as you are out of sight your reputation will suffer as much as your pocket has. Before you

go to market, look over your larder, and consider well what things are wanting—especially on a Saturday. No well-regulated family can suffer a disorderly caterer to be jumping in and out to make purchases on a Sunday morning. You will be enabled to manage much better if you will make out a bill of fare for the week on the Saturday before; for example, for a family of half a dozen—

Sunday—Roast beef and pudding.

Monday—Fowl, what was left of pudding fried, or warmed in the Dutch oven.

Tuesday—Calf's head, apple pie.

Wednesday—Leg of mutton.

Thursday—Do. broiled or hashed, or pan-cakes.

Friday—Fish, pudding.

Saturday—Fish, or eggs and bacon.

It is an excellent plan to have certain things on certain days. When your butcher and poulterer knows what you will want, he has a better chance of doing his best for you; and never think of ordering beef for roasting except for Sunday. When you order meat, poultry, or fish, tell the tradesman when you intend to dress it: he will then have it in his power to serve you with provision that will do him credit, which the finest meat, &c., in the world will never do, unless it has been kept a proper time to be ripe and tender.—*Cook's Oracle*.

**42. CLEANING SILKS, SATINS, COLOURED WOOLLEN DRESSES, &c.**—Four ounces of soft soap, four ounces of honey, the white of an egg, and a wine-glassful of gin; mix well together, and the article to be scoured with a rather hard brush thoroughly, afterwards rinse it in cold water, leave to drain, and iron whilst quite damp.—A friend informs us that she believes this receipt has never been made public; she finds it an excellent one, having used it for a length of time, and recommended it to friends with perfect success.

**43. SPONGE CAKE.**—A lady, or, as the newspapers say, "a correspondent upon whom we can confidently rely," favours us with the following

simple receipt, which, she says, gives less trouble than any other, and has never been known to fail:—Take five eggs, and half a pound of loaf-sugar sifted; break the eggs upon the sugar, and beat all together with a steel fork for half an hour. Previously take the weight of two eggs and a-half in their shells, of flour. After you have beaten the eggs and sugar the time specified, grate in the rind of a lemon (the juice may be added at pleasure), stir in the flour, and immediately pour it into a tin lined with buttered paper, and let it be instantly put into rather a cool oven.

**44. BED CLOTHES.**—The perfection of dress, for day or night, where warmth is the purpose, is that which confines around the body sufficient of its own warmth, while it allows escape to the exhalations of the skin. Where the body is allowed to bathe protractedly in its own vapours we must expect an unhealthy effect upon the skin. Where there is too little ventilating escape, insensible perspiration is checked, and something analogous to fever supervenes; foul tongue, ill taste, and lack of morning appetite betray the evil.

**45. ORANGE MARMALADE.**—Choose the largest Seville oranges, as they usually contain the greatest quantity of juice, and choose them with clear skins, as the skins form the largest part of the marmalade. Weigh the oranges, and weigh also an equal quantity of loaf-sugar. Skin the oranges, dividing the skins into quarters, and put them into a preserving-pan; cover them well with water, and set them on the fire to boil: in the meantime prepare your oranges; divide them into gores, then scrape with a teaspoon all the pulp from the white skin; or, instead of skinning the oranges, cut a hole in the orange and scoop out the pulp; remove carefully all the pips, of which there are innumerable small ones in the Seville orange, which will escape observation unless they are very minutely examined. Have a large basin near you with some cold water in it, to throw the pips and

skins into—a pint is sufficient for a dozen oranges. A great deal of glutinous matter adheres to them, which, when strained through a sieve, should be boiled with the other parts. When the skins have boiled till they are sufficiently tender to admit of a fork being stuck into them, strain them; some of which may be boiled with the other parts; scrape clean all the pith, or, inside, from them; lay them in folds, and cut them into thin slices of about an inch long. Clarify your sugar; then throw your skins and pulp into it, stir it well, and let it boil about half an hour. If the sugar is broken into small pieces, and boiled with the fruit, it will answer the purpose of clarifying, but it must be well skimmed when it boils. Marmalade should be made at the end of March or the beginning of April, as Seville oranges are then in their best state.

#### 48. IMPRESSIONS FROM PRINTS.

—The print is soaked first in a solution of potash, and then in one of tartaric acid. This produces a perfect diffusion of crystals in bi-tartrate of potash, through the texture of the unprinted part of the paper. As this salt repels oil, the ink-roller may now be passed over the surface, without transferring any of its contents to the paper, except in those parts to which the ink had been originally applied. The ink of the print prevents the saline matter from penetrating wherever it is present, and wherever there is no saline matter present the ink adheres; so that many impressions may be taken, as in lithography.

47. HOOPING-COUGH. — Dissolve a scruple of salt of tartar in a quarter pint of water; add to it ten grains of cochineal; sweeten it with sugar. Give to an infant a fourth part of a table-spoonful four times a day; two years old half a spoonful; from four years a table-spoonful.—Great care is required in the administration of medicines to infants. We can assure paternal inquirers that the foregoing may be depended upon.

#### FOOD IN SEASON.

There is an old maxim, "A place for everything, and everything in its place." To which we beg to add another, "A season for everything, and everything in season."

#### 48. JANUARY.

[Those Fish, Poultry, &c., distinguished by *Italics* are to be had in the highest perfection.]

FISH.—Barbel, brill, carp, cod, crabs, cray-feet, dabbs, *dace*, eels, flounders, *haddocks*, herrings, lampreys, ling, lobsters, mussels, oysters, perch, pike, plaice, prawns, salmon-trout, shrimps, skate, smelt, soles, sprats, sturgeon, *tench*, thornback, turbot, *whiting*.

MEAT.—Beef, house-lamb, mutton, pork, veal, and doe venison.

POULTRY AND GAME.—Capons, chickens, ducks, wild-ducks, fowls, geese, grouse, *hares*, larks, moor-game, partridges, pheasants, pigeons (*tame*), pullets, *rabbits*, snipes, turkeys (*hen*), widgeons, woodcocks.

VEGETABLES.—Beet, brocoli, (white and purple), brussels sprouts, cabbage, cardoons, carrots, celery, chervil, colewort, creases, endive, garlic, herbs (dry), kale (Scotch), leeks, lettuces, mint, mustard, onions, parsley, parsnips, potatoes, rape, rosemary, sage, salsify, savoy, scorzonera, shalots, skirrets, sorrel, spinach (winter), tarragon, thyme, turnips.

FORCED VEGETABLES.—Asparagus, cucumbers, Jerusalem artichokes, and mushrooms.

FRUIT.—Almonds. Apples: French pippin, golden pippin, golden russet, Kentish pippin, nonpareil, winter pearmain. Pears: Bergamot d'Hollande, Bon Chrétien, Charmontelle, Colmar, winter beurré. Grapes: English and Foreign. Chestnuts, medlars, nuts, oranges, walnuts.

#### 49. FEBRUARY.

FISH.—Barbel, brill, carp, cockles, cod, crabs, cray-fish, dabbs, *dace*, eels, flounders, *haddocks*, herrings, lampreys, ling, lobsters, mussels, oysters, perch, pike, plaice, prawns, salmon, shrimps, skate, smelts, soles, sturgeon, *tench*, thornback, turbot, *whiting*.

**MEAT.**—Beef, house-lamb, mutton, pork, veal.

**POULTRY AND GAME.**—Capons, chickens, ducklings, fowl (wild), green geese, hares, partridges, pheasants, pigeons, (tame and wild), pullets with egg, rabbits (tame), snipes, turkeys, turkey poult, woodcocks.

**VEGETABLES.**—Beet, broccoli (white and purple), burnet, cabbage, cardoons, carrots, celery, chervil, colewort, cresses, endive, garlic, dry herbs, leeks, lettuces, mint, mustard, mushrooms, onions, parsnips, parsley, potatoes, radish, rape, rosemary, sage, salsify, savory, scorzonera, shalots, skirrets, sorrel, spinach, sprouts, tarragon, thyme, turnips, winter savoury.

**FORCED VEGETABLES.**—Asparagus, cucumbers, and Jerusalem artichokes.

**FRUIT.**—Apples: French pippin, golden pippin, golden russet, Holland pippin, Kentish pippin, nonpareil, Wheeler's russet, winter pearmain. Chestnuts, oranges. Pears: Bergamot, d'Pasque, winter Bon Chrétien, winter Russet.

#### 50. MARCH.

**FISH.**—Brill, carp, cockles, cod, conger eels, crabs, dabbs, dory, eels, flounders, ling, lobsters, mackerel, mullets, mussels, oysters, perch, pike, plaice, prawns, salmon, salmon-trout, shrimps, skate, smelts, soles, sturgeon, turbot, tench, and whiting.

**MEAT.**—Beef, house-lamb, mutton, pork, veal.

**POULTRY AND GAME.**—Capons, chickens, ducklings, fowls, green-geese, grouse, leverets, moor-game, pigeons, rabbits, snipes, turkeys, woodcocks.

**VEGETABLES.**—Artichokes (Jerusalem), beet, broccoli (white and purple), brussels sprouts, cabbage, cardoons, carrots, celery, chervil, colewort, cresses, endive, garlic, herbs (dry), kale (see and Scotch), lettuces, - mint, mushrooms, mustard, onions, parsley, parsnips, potatoes, rape, rosemary, sage, savory, shalots, sorrel, spinach, tarragon, thyme, turnips, turnip-tops.

**FORCED VEGETABLES.**—Asparagus, beans, cucumbers, and rhubarb.

**FRUIT.**—Apples: French pippin, golden russet, Holland pippin, John apple, Kentish pippin, nonpareil, Norfolk beaunfin, Wheeler's russet. Chestnuts, oranges. Pears: Bergamot, Bugi, Charmontelle, St. Martin, winter Bon Chrétien. Strawberries (forced).

#### 51. APRIL.

**FISH.**—Brill, carp, chub, cockles, cod, conger-eels, crabs, dabbs, dory, eels, flounders, halibut, herrings, ling, lobsters, mackerel, mullets, mussels, oysters, perch, pike, prawns, plaice, salmon, shrimps, skate, smelts, soles, sturgeon, tench, trout, turbot, whittings.

**MEAT.**—Beef, grass-lamb, house-lamb, mutton, pork, veal.

**POULTRY AND GAME.**—Chickens, ducklings, fowls, green-geese, leverets, pigeons, pullets, rabbits, turkey-poult, wood-pigeons.

**VEGETABLES.**—Asparagus, broccoli, chervil, coleworts, cucumbers, endive, fennel, herbs of all sorts, lettuce, onions, parsley, parsnips, peas, purslane, radishes, sea-kale, sorrel, spinach, small salad, tarragon, turnip-radishes, turnip-tops, and rhubarb.

**FRUIT.**—Apples: Golden russet, John apple, nonpareil, Wheeler's russet. Nuts, oranges. Pears: Bergamot, Bon Chrétien, Bugi, Carmelite, francreal, St. Martial. A few strawberries, walnuts. Forced: Apricots, cherries, strawberries.

#### 52. MAY.

**FISH.**—Brill, carp, chub, cod, conger-eels, crabs, cray-fish, dabbs, dace, dory, eels, flounders, gurnets, haddock, halibut, herring, ling, lobsters, mackerel, mullet, perch, pike, plaice, prawns, salmon, shrimps, skate, smelts, soles, sturgeon, tench, trout, turbot, whittings.

**MEAT.**—Beef, grass-lamb, house-lamb, mutton, pork, veal.

**POULTRY AND GAME.**—Chickens, ducklings, fowls, green geese, leverets, pigeons, pullets, rabbits, wood-pigeons.

**VEGETABLES.**—Angelica, artichokes, asparagus, balm, kidney-beans, cabbage, carrots, cauliflowers, chervil, cucumbers, fennel, herbs of all sorts, lettuce.

mint, onions, parsley, peas, new potatoes, purslane, radishes, rhubarb, salad of all sorts, sea-kale, sorrel, spinach, thyme, turnips.

FRUIT.—Apples: John apple, golden russet, winter russet; May-duke cherries; currants; gooseberries; melons; Pears: L'Amozetta, winter green-scarlet strawberries. Forced: Apricots, nating peaches, and strawberries.

### 53. JUNE.

FISH.—Carp, cod, conger-eels, crabs, cray-fish, dabbs, dace, dory, eels, flounders, gurnets, haddocks, herrings, ling, lobsters, mackerel, mullet, perch, pike, plaice, *prawns*, salmon, salmon-trout, skate, snelts, soles, sturgeon, tench, trout, turbot, whitebait, whiting.

MEAT.—Beef, grass-lamb, house-lamb, mutton, pork, veal, buck-venison.

POULTRY AND GAME.—Chickens, ducklings, fowls, green-geese, leverets, pigeons, plovers, pullets, rabbits, turkey-poults, wheat-ears, wood-pigeons.

VEGETABLES.—Angelica, artichoke, asparagus, beans (French, kidney, and Windsor), white beet, cabbage, carrots, cauliflowers, chervil, cucumbers, endive, herbs of all sorts, leeks, lettuce, onions, parsley, peas, potatoes, purslane, radishes, salad of all sorts, spinach, turnips, vegetable marrow.

FOR DRYING.—Burnet, mint, tarragon, orange-thyme.

FOR PICKLING.—Garlic.

FRUIT.—Apples: John apple, stone pippin, golden russet. Apricots. Cherries: Duke, bigaroon, black-heart. Currants, gooseberries, melons, pears. (Winter green), strawberries. Forced: grapes, nectarines, peaches, pines.

### 54. JULY.

FISH.—Barbel, brill, carp, cod, conger-eels, crabs, cray-fish, dabbs, dace, dory, eels, flounders, gurnets, haddocks, herrings, ling, lobsters, mackerel, mullet, perch, pike, plaice, *prawns*, salmon, skate, soles, tench, thornback, trout.

MEAT.—Beef, grass-lamb, mutton, veal, buck-venison.

POULTRY AND GAME.—Chickens, ducks, fowls, green-geese, leverets, pigeons, plovers, rabbits, turkey-poults, wheat-ears, wild pigeons, wild rabbits.

VEGETABLES.—Artichokes, asparagus, balm, beans (French, kidney, scarlet, and Windsor), carrots, cauliflowers, celery, chervil, cucumbers, endive, fennel, herbs of all sorts, lettuces, mint, mushrooms, peas, potatoes, purslane, radishes, rucola, salads of all sorts, salsify, scorzonera, sorrel, spinach, turnips.

FOR DRYING.—Knotted marjoram, mushrooms, winter-savoury.

FOR PICKLING.—French beans, red cabbage, cauliflowers, garlic, gherkins, nasturtiums, onions.

FRUIT.—Apples: Codlin, jennetting, Margaret, summer pearmain, summer pippin. Apricots, cherries, currants, damsons, gooseberries, melons, nectarines, peaches. Pears: Catherine, green-chisel, jargonelle, musqua. Oranges, pine-apples, plums, raspberries, strawberries.

### 55. AUGUST.

FISH.—Barbel, brill, carp, cod, conger-eels, crabs, cray-fish, dabbs, dace, eels, flounders, gurnets, haddocks, herrings, lobsters, mackerel, mullet, oysters, perch, pike, plaice, *prawns*, salmon, skate, soles, tench, thornback, turbot, whiting.

MEAT.—Beef, grass-lamb, mutton, veal, buck-venison.

POULTRY AND GAME.—Chickens, ducks, fowls, green-geese, grouse (from 12th), leverets, moor-game, pigeons, plovers, rabbits, turkeys, turkey-poults, wheat-ears, wild ducks, wild pigeons, wild rabbits.

VEGETABLES.—Artichokes, beans, (French, kidney, scarlet, and Windsor), white-beet, carrots, cauliflowers, celery, cucumbers, endive, fennel, pot-herbs of all sorts, leeks, lettuces, mushrooms, onions, peas, potatoes, purslane, radishes, salad of all sorts, salsify, scorzonera, shallots, spinach, turnips.

FOR DRYING.—Basil, sage, thyme.

FOR PICKLING.—Red-cabbage, capsaums, chilies, tomatoes, walnuts.

**FRUIT.**—Apples: Codlin, summer pearmain, summer pippin, cherries, currants, damsons, figs, filberts, gooseberries, grapes, melons, mulberries, nectarines, peaches. Pears: Jargonelle, summer Bon Chrétien, Windsor. Plums: Green-gages, Orleans, raspberries, Alpine strawberries.

## 56. SEPTEMBER.

**FISH.**—Barbel, brill, carp, cockles, cod, conger-eels, crab, *dace*, eels, flounders, gurnets, haddocks, hake, herrings, lobsters, mullet, muskels, *oysters*, perch, *pike*, plaice, prawns, shrimps, soles, tench, thornback, turbot, whittings.

**MEAT.**—Beef, mutton, pork, veal, buck-venison.

**POULTRY AND GAME.**—Chickens, ducks, fowls, green-geese, *grouse*, *hares*, larks, leverets, *moor-game*, *partridge*, pigeons, plovers, rabbits, *teal*, turkey, turkey-poults, wheat-ears, *wild ducks*, *wild pigeons*, *wild rabbits*.

**VEGETABLES.**—Artichokes, Jerusalem artichokes, beans (French and scarlet), cabbages, carrots, cauliflowers, celery, cucumbers, endive, *finochia*, herbs of all sorts, leeks, lettuces, mushrooms, onions, parsnips, peas, potatoes, radishes, salad of all sorts, shalots, turnips.

**FRUIT.**—Apples: White Caville, pearmain, golden rennet. Cherries, (Morella), damsons, figs, filberts. Grapes: Muscadine, Frontignac, red and black Hamburg, Malmsey, Hazel nuts, medlars, peaches. Pears: Bergamot, brown beurré. Pineapples, plums, quinces, strawberries, walnuts.

## 57. OCTOBER.

**FISH.**—Barbel, brill, turbot, carp, cockles, cod, conger-eels, crabs, *dace*, *dory*, eels, gudgeon, haddocks, *hake*, halibut, herrings, lobsters, muskels, *oysters*, perch, *pike*, prawns, salmon-trout, shrimps, smelts, soles, tench, thornback, turbot, whittings.

**MEAT.**—Beef, mutton, pork, veal, doe-venison.

**POULTRY AND GAME.**—Chickens, dotterel, ducks, fowls, green-geese, *grouse*, *hares*, larks, *moor-game*, par-

tridges, *pheasants*, pigeons, rabbits, snipes, *teal*, turkey, wheat-ears, wid-geon, wild-ducks, wild-pigeons, wild-rabbits, *woodcocks*.

**VEGETABLES.**—Artichokes, Jerusalem artichokes, brocoli, cabbages, cauliflowers, celery, coleworts, endive, herbs of all sorts, leeks, onions, parsnips, peas, potatoes, radishes, *recombole*, salad, savoys, scorzonera, skirrets, shalots, spinach (winter), tomatoes, truffles, turnips.

**FRUIT.**—Almonds. Apples: Pearmain, golden pippin, golden rennet, royal russet. Black and white bullaas, damsons, late figs, filberts, hazel nuts, grapes, medlars. Peaches: Old Newington, October. Pears: Bergamot, beurré, Charmontelle, Bon-Chrétien, cressau, swan's-egg. Quinces, services, walnuts.

## 58. NOVEMBER.

**FISH.**—Barbel, brill, turbot, carp, cockles, cod, crabs, *dace*, *dory*, eels, gudgeons, gurnets, haddocks, *hake*, halibut, herrings, ling, lobsters, mussels, oysters, perch, *pike*, plaice, prawns, salmon, shrimps, skate, smelts, soles, sprats, tench, thornback, turbot, whittings.

**MEAT.**—Beef, house-lamb, mutton, pork, veal, doe-venison.

**POULTRY AND GAME.**—Chickens, dotterel, ducks, fowls, *geese*, *grouse*, *hares*, larks, *moor-game*, partridges, pheasants, pigeons, rabbits, snipes, *teal*, turkey, wheat-ears, wid-geon, wild-ducks, *woodcocks*.

**VEGETABLES.**—Jerusalem artichokes, chard beets, borecole, brocoli, cabbages, cardoons, carrots, celery, chervil, coleworts, endive, herbs of all sorts, leeks, lettuces, onions, parsnips, potatoes, salad, savoys, scorzonera, skirrets, shalots, spinach, tomatoes, turnips.

**FRUIT.**—Almonds. Apples: Golden pippin, Holland pippin, Kentish pippin, nonpareil, winter pearmain, Wheeler's russets. Bullaas, chestnuts, hazel-nuts, grapes, medlars. Pears: Bergamot, Bery de Charmontelle, Colmar, cressau, Spanish bon Chrétien. Services, walnuts.

## 39. DECEMBER.

**FISH.**—Barbel, brill, turbot, carp, cockles, cod, crabs, dab, dory, eels, gudgeon, gurnets, haddocks, hake; halibut, herrings, ling, lobsters, mackerel, mussels, oysters, perch, pike, plaice, ruffe, salmon, shrimps, skate, smelts, soles, sprats, sturgeon, tench, whiting.

**MEAT.**—Beef, house-lamb, mutton, pork, veal, doe-venison.

**POULTRY AND GAME.**—Capon, chickens, dotterel, ducks, fowls, geese, grouse, guinea-fowl, hares, larks, moor-game, partridges, pea-fowl, pheasants, pigeons, rabbits, snipes, teal, turkey, wheat-ears, widgeon, wild-ducks, wood-cocks.

**VEGETABLES.**—Jerusalem artichokes, beets, borecole, white and purple brocoli, cabbages, cardoons, carrots, celery, endive, herbs of all sorts, leeks, lettuces, onions, parsnips, potatoes, salad, savoy, scorzonera, skirrets, shalots, spinach, truffles, turnips, forced asparagus.

**FRUIT.**—Almonds. Apples: Golden pippin, nonpareil, winter pearmain, golden russet. Chestnuts, hazel-nuts, a few grapes, medlars, oranges. Pears: Bergamot, Beurré d'Hiver, Colmar, Holland, St. Germain's Walnuts.

**60. TO SOFTEN THE SKIN, AND IMPROVE THE COMPLEXION.**—If flowers of sulphur be mixed in a little of milk, and after standing an hour or two, the milk (without disturbing the sulphur) be rubbed into the skin, it will keep it soft, and make the complexion clear. It is to be used before washing. A lady of our acquaintance, being exceedingly anxious about her complexion, adopted the above suggestion. In about a fortnight she wrote to us to say that the mixture became so disagreeable after it had been made a few days, that she could not use it. We should have wondered if she could—the milk became putrid! A little of the mixture should have been prepared over night with evening milk, and used the next morning, but not afterwards. About a wine-glass-

ful made for each occasion would suffice.

**61. HINTS ABOUT MAKING PRESERVES.**—It is not generally known, that boiling fruit a long time, and *skimming it well, without the sugar, and without a cover* to the preserving-pan, is a very economical and excellent way—economical, because the bulk of the scum rises from the fruit, and not from the sugar, if the latter is good; and boiling it without a cover, allows the evaporation of all the watery particles therefrom; the preserves keep firm, and well flavoured. The proportions are, three-quarters of a pound of sugar to a pound of fruit. Jam made in this way, of currants, strawberries, raspberries, or gooseberries, is excellent.

**62. LEMON RICE.**—Boil sufficient rice in milk, with white sugar to taste, till it is soft; put it into a pint basin or an earthenware blanchage mould, and leave it till cold. Peel a lemon very thick, cut the peel into shreds about half or three-quarters of an inch in length, put them into a little water, boil them up, and throw the water away, lest it should be bitter, then pour about a tea-cup. full of fresh water upon them; squeeze and strain the juice of the lemon, add it with white-sugar to the water and shreds, and let it stew gently at the fire for two hours. (When cold it will be a syrup). Having turned out the jellied rice into a cut-glass dish, or one of common delf, pour the syrup gradually over the rice, taking care the little shreds of the peel are equally distributed over the whole.

**63. MOUTH GLUE.**—A very useful preparation is sold by many of the law stationers in London under this title; it is merely a thin cake of soluble glue (four inches by one and a half), which, when moistened with the tongue, furnishes a ready means of fastening papers, &c., together. It is made by dissolving one pound of fine glue or gelatine in water, and adding half a pound of brown sugar, boiling the whole until it is sufficiently thick to become solid on cooling; it is then poured into moulds or on

a slab slightly greased, and cut into the required shape when cool. Cost: gelatine 1s. 8d. per pound; sugar, 4d. per pound. (See 66.)

#### 64. SODA WATER POWDERS.—

A pleasant, cooling, summer drink. The blue paper contains carbonate of soda, thirty grains. The white paper tartaric acid, twenty-five grains.

*Directions.*—Dissolve the contents of the blue paper in half a tumbler of water, stir in the other powder, and drink during effervescence.

Soda powders furnish a saline beverage, which is very slightly laxative, and well calculated to allay the thirst in hot weather.

One pound of carbonate of soda, 4d.; and thirteen ounces and a half of tartaric acid, at 2s. per pound, supply the materials for 256 powders of each sort. Usual retail price, 1d. for the two powders required for a draught.

**65. METHOD OF PRESERVING MACKEREL, SO THAT IT WILL KEEP AND BE EXCELLENT FOR MONTHS.**—Mackerel, being at certain times exceedingly plentiful (especially to those who live near the coast), so much so indeed as to become almost a drug at such seasons, may be preserved to make an excellent and well-flavoured dish, weeks or months after the season is past, by the following means. Having chosen fine fish, cleaned them perfectly, and either boiled them or lightly fried them in oil, the fish should be divided, and the bones, heads, and skins being removed, they should then be well rubbed over with the following seasoning: for every dozen good-sized fish it will be requisite to use three table-spoonfuls of salt (heaped), one ounce and a half of common black pepper, six or eight cloves, and a little mace, finely powdered, and as much nutmeg, grated, as the operator chooses to afford, not, however, exceeding one nutmeg. Let the whole surface be well covered with the seasoning; then lay the fish in layers packed into a stone jar (not a glazed

one); cover the whole with pretty good vinegar, and, if it be intended to be long kept, pour salad oil or melted suet over the top. N.B. The glazing on earthen jars is made from lead or arsenic, from which vinegar draws forth poison. (See 2.)

**66. LIQUID GLUE.**—Dissolve one ounce of borax in a pint of boiling water; add two ounces of shellac, and boil in a covered vessel until the lac is dissolved. This forms a very useful and cheap cement; it answers well for pasting labels on tin, and withstands damp much better than the common glue. Cost: borax, 1s. 2d. per pound; shellac, 6d. to 8d. per pound.—*Note.* The liquid glue made by dissolving shellac in naphtha is dearer, soon dries up, and has an unpleasant smell. (See 63.)

**67. ROSE LIP SALVE.**—No. 1. Oil of almonds, three ounces; alkanet, half an ounce. Let them stand together in a warm place until the oil is coloured, then strain. Melt one ounce and a half of white wax, and half an ounce of spermaceti with the oil, stir till it begins to thicken, and add twelve drops of otto of roses. No. 2. White wax, one ounce; almond oil, two ounces; alkanet, one drachm. Digest in a warm place till sufficiently coloured, strain, and stir in six drops of otto of roses. White wax, 2s. 2d. per pound; almond oil, 1s. 6d. per pound; alkanet root, 6d. to 8d.; otto of roses, 2s. 6d. per drachm. Lip salve is usually put up in small covered pots, and sold at 6d.

**68. WALKING.**—To walk gracefully, the body must be erect, but not stiff, and the head held up in such a posture that the eyes are directed forward. The tendency of untaught walkers is to look towards the ground near the feet; and some persons appear always as if admiring their shoe-ties. The eyes should not thus be cast downward, neither should the chest bend forward to throw out the back, making what are termed round shoulders; on the contrary, the whole person must held itself up, as if not afraid to look the

world in the face, and the chest by all means be allowed to expand. At the same time, every thing like strutting or pomposity must be carefully avoided. An easy, firm, and erect posture, are alone desirable. In walking, it is necessary to bear in mind that the locomotion is to be performed entirely by the legs. Awkward persons rock from side to side, helping forward each leg alternately by advancing the haunches. This is not only ungraceful but fatiguing. Let the legs alone advance, bearing up the body.

**69. LEMON AND KALI, OR SHERBET.**—Large quantities of this wholesome and refreshing preparation are manufactured and consumed every summer; it is sold in bottles, and also as a beverage, made by dissolving a large tea-spoonful in a tumbler two-thirds filled with water. Ground white sugar, 7d. to 8d. per pound, half a pound; tartaric acid, at 2s. per pound; carbonate of soda, at 4d. per pound; of each a quarter of a pound; essence of lemon, at 8d. per ounce, forty drops. All the powders should be well dried; add the essence to the sugar, then the other powders; stir all together, and mix by passing twice through a hair-sieve. Must be kept in tightly-corked bottles, into which a damp spoon must not be inserted. All the materials may be obtained at a wholesale druggist's, the sugar must be ground, as, if merely powdered, the coarser parts remain undissolved.

**70. WATERPROOFING FOR BOOTS AND SHOES.**—Linseed oil, one pint, oil of turpentine or camphine, a quarter of a pint; yellow wax, a quarter of a pound; Burgundy pitch, a quarter of a pound. To be melted together with a gentle heat, and when required for use, to be warmed and well rubbed into the leather before a fire, or in the hot sun. Cost: linseed oil, 8d. per pint; oil of turpentine, 8d. per pint; wax, 1s. 10d. per pound; Burgundy pitch, 8d. per pound. Should be poured, when melted, into small gallipots or tin boxes, for sale.

## 71. MY WIFE'S LITTLE TEA PARTIES.

My wife is celebrated for her little tea parties; not tea parties alone—but dinner parties, picnic parties, music parties, supper parties, in fact, she is the life and soul of ALL PARTIES, which is more than any leading politician of the day can boast. But her great forte is her little tea parties—praised and enjoyed by everybody. A constant visitor at these little parties is Mrs. Hitchings, (spoken of elsewhere, 161), and she remarks that she “never knew any one who understood the art of bringing so many elegancies together” as my wife. Nobody makes tea like her, and how she makes it she will impart at a future time. But for her little “nick-nacks,” as she calls them, which give a variety and a charm to the tea table, without trenching too deeply upon our own pocket, she has been kind enough to give a few receipts upon the present occasion.

**72. NICE PLUM CAKE.**—One pound of flour, quarter of a pound of butter, quarter of a pound of sugar, quarter of a pound of currants, three eggs, half a pint of milk, and a small tea-spoonful of carbonate of soda. The above is excellent. The cakes are always baked in a common earthen flower-pot saucer, which is a very good plan.

**73. GINGERBREAD SNAPS.**—One pound of flour, half a pound of treacle, half a pound of sugar, quarter of a pound of butter, half an ounce of best prepared ginger, sixteen drops of essence of lemon, potash the size of a nut dissolved in a table-spoonful of hot water. This has been used in my wife's family for thirty years.

**74. DROP CAKES.**—One pint of flour, half a pound of butter, quarter of a pound of powdered lump sugar, half a nutmeg grated, a handful of currants, two eggs, and a large pinch of carbonate of soda, or volatile salts. To be baked in a slack oven for ten minutes or a quarter of an hour. The above quantity will make about thirty cakes. The cakes are excellent.

75. A VERY EXCELLENT AND CHEAP CAKE.—Two pounds and a-half of flour, three-quarters of a pound of sugar, three-quarters of a pound of butter, half a pound of currants, or quarter of a pound of raisins, quarter of a pound of orange peel, two ounces of carraway seeds, half an ounce of ground cinnamon, or ginger, four tea-spoonfuls of carbonate of soda; mixed well, with rather better than a pint of new milk. The butter must be well melted previous to being mixed with the ingredients.

76. "JERSEY WONDERS."—The oddity of these "wonders" consists solely in the manner of cooking, and the shape consequent. Take two pounds of flour, six ounces of butter, six ounces of white sugar, a little nutmeg, ground ginger, and lemon peel; beat eight eggs, and knead them all well together; a taste of brandy will be an improvement. Roll them about the thickness of your wrist; cut off a small slice, and roll it into an oval, about four inches long and three inches wide, not too thin; cut two slits in it, but not through either end; there will then be three bands. Pass the left one through the aperture, to the right, and throw it into a brass or bell-metal, skillet of BOILING lard, or beef or mutton dripping. You may cook three or four at a time. In about two minutes turn them with a fork, and you will find them browned, and swollen or risen in two or three minutes more. Remove them from the pan to a dish, when they will dry and cool.

77. MUFFINS.—Add a pint and a-half of good ale yeast (from pale malt, if possible) to a bushel of the very best white flour; let the yeast lie all night in water, then pour off the water quite clear; make two gallons of water just milk-warm, and mix your water, yeast, and two ounces of salt well together for about a quarter of an hour. Strain the whole, and mix up your dough as light as possible, letting it lie in the trough an hour, to rise; next roll it

pieces about the size of a large walnut. These must be rolled out thin with a rolling-pin, in a good deal of flour, and if covered immediately with a piece of flannel, they will rise to a proper thickness; but if too large or small, dough must be added, accordingly, or taken away; meanwhile, the dough must be also covered with flannel. Next begin baking; and when laid on the iron watch carefully, and when one side changes colour, turn the other, taking care that they do not burn or become discoloured. Be careful also that the iron does not get too hot. In order to bake muffins properly, you ought to have a place built as if a copper was to be set; but instead of copper, a piece of iron must be put over the top, fixed in form like the bottom of an iron pot, underneath which a coal fire is kindled when required. Toast the muffins crisp on both sides, with a fork; pull them open *with your hand*, and they will be like a honeycomb; lay in as much butter as you intend, then clap them together, and set by the fire; turn them once, that both sides may be buttered alike. When quite done, cut them across with a knife; but if you use a knife either to spread or divide them, they will be as heavy as lead. Some kind of flour will soak up more water than another; when this occurs, add water; or if too moist, add flour; for the dough must be as light as possible.

78. DIAMOND CEMENT.—Soak isinglass in water till it is soft, then dissolve it in the smallest possible quantity of proof spirit, by the aid of a gentle heat; in two ounces of this mixture dissolve ten grains of ammoniacum, and whilst still liquid, add half a dram of mastic dissolved in three drams of rectified spirit; stir well together, and put into small bottles for sale. Cost: isinglass, 1s. per ounce; rectified spirit, 2s. 6d. per pint; ammoniacum, 3d. per ounce; mastic, 1s. per ounce. This cement is usually sold at 1s. per two-dram bottle. (See 139.)

*Directions for use.*—Liquify the cement by standing the bottle in hot

water, and use it directly; the cement improves the oftener the bottle is thus warmed, and resists the action of water and moisture perfectly.

**79. GINGER-BEER.**—The following recipe for making a very superior ginger-beer is taken from the celebrated treatise of Dr. Pereira, on diet. The honey gives it a peculiar softness, and from not being fermented with yeast, it is less violent in its action when opened, but requires to be kept a longer time than usual before use. White sugar, five pounds; lemon-juice, one quarter of a pint; honey, one quarter of a pound; ginger, bruised, five ounces; water, four gallons and a-half. Boil the ginger in three quarts of the water for half an hour, then add the sugar, lemon-juice, and honey, with the remainder of the water, and strain through a cloth; when cold, add a quarter of the white of an egg, and a small teaspoonful of essence of lemon; let the whole stand four days, and bottle; this will keep many months. This quantity will make 100 bottles; the cost being, sugar, five pounds, 2s.; lemon-juice, 2d.; honey, 3d.; best white ginger, 2d.; egg and essence of lemon, 2d.; total, 2s. 9d. Ginger-beer bottles may be obtained at the potteries at 10s. to 12s. per gross, and corks at 8d. to 1s. per gross.

**80. PHOSPHORUS PASTE FOR DESTROYING RATS AND MICE.**—Melt one pound of lard with a very gentle heat in a bottle or glass flask plunged into warm water; then add half an ounce of phosphorus, and one pint of proof spirit; cork the bottle securely, and as it cools shake it frequently, so as to mix the phosphorus uniformly; when cold pour off the spirit (which may be preserved for the same purpose), and thicken the mixture with flour. Small portions of this mixture may be placed near the rat holes, and being luminous in the dark it attracts them, is eaten greedily, and is certainly fatal. N.B. There is no danger of fire from its use. Cost: phosphorus, 6d. per ounce; lard, 1s. per pound.

**81. INKS.**—There are many recipes published for making ink; the following is as useful and economical a mode of producing good ink as any of them:—

**82. Dr. URB'S INK.**—For twelve gallons of ink take twelve pounds of bruised galls, five pounds of gum, five pounds of green sulphate of iron, and twelve gallons of rain water. Boil the galls with nine gallons of the water for three hours, adding fresh water to supply that lost in vapour; let the decoction settle, and draw off the clear liquor. Add to it the gum previously dissolved in one and a-half gallons of water; dissolve the green vitriol separately in one and a half gallons of water, and mix the whole. Cost of preparation: gall, 1s. 4d. per pound; gum, 8d. per pound; green sulphate of iron, 1d. per pound.

**83. INK POWDER.**—Is formed of the dry ingredients for ink, powdered and mixed. Powdered galls, two pounds; powdered green vitriol, one pound; powdered gum, eight ounces. This should be put up in two ounce packets, each of which will make one pint of ink. Cost: galls, 1s. 4d. per pound; green vitriol, 1d. per pound; powdered gum, 1s. 5d. per pound.

**84. RED WRITING INK.**—Best ground Brazil wood, four ounces; diluted acetic acid, one pint; alum, half an ounce. Boil them slowly in an enamelled vessel for one hour, strain, and add an ounce of gum. Brazil wood, 1s. per pound; diluted acetic acid, 3d. per pint; alum, 2d. per pound; ground gum, 1s. 6d. per pound.

**85. MARKING INK WITHOUT PREPARATION.**—There are several recipes for this ink, but the following of Mr. Redwood is rapidly superseding all the others:—Dissolve, separately, one ounce of nitrate of silver (4s. 6d. per ounce), and one and a half ounces of sub-carbonate soda (best washing soda) in distilled or rain water. Mix the solutions, and collect and wash the precipitate in a filter; whilst still moist rub it up in a marble or wedge-wood mortar with three drachms of tartaric acid; add two ounces of distilled water, mix six drachms of white sugar,

and ten-drachms of powdered gumarabic, half an ounce of archil and water to make up six ounces in measure. Cost: one ounce of nitrate of silver, 4s. 6d.; soda, tartaric acid, sugar, and gum, 8d.; archil, 10d. per pint. It is usually put up in one or two-drachm bottles, labelled, and sold at 8d. The above quantity would make 24 two-drachm bottles.—Bottles from 8d. to 10d. per dozen.

**86. INK FOR ZINC GARDEN LABELS.**—Verdigris, one ounce; sal ammoniac, one ounce; lamp black, half an ounce; water, half a pint. Mix in an earthenware mortar, without using a metal spatula. Should be put up in small (one ounce) bottles for sale.

*Directions.*—To be shaken before use, and used with a clean quill pen, on bright freshly cleaned zinc. Cost: verdigris 3d. per ounce; sal ammoniac 8d. per pound; lamp black 4d. per pound.

*Note.*—Another kind of ink for zinc is also used, made of chloride of platinum, five grains, dissolved in one ounce of distilled or rain water; but the first, which is much less expensive, answers perfectly, if used as directed; on clean bright zinc.

**87. BRUNSWICK BLACK FOR VARNISHING GRATES.**—Melt four pounds of common asphaltum and add two pints of linseed oil, and one gallon of oil of turpentine. This is usually put up in stoneware bottles for sale, and is used with a paint brush. If too thick, more turpentine may be added. Cost: asphaltum, 1s. per pound; linseed, 6d. per pint; turpentine, 8d. per pint.

**88. BANBURY CAKES.**—Roll out the paste about half an inch thick, and cut it into pieces, then roll again till each piece becomes twice the size; put some Banbury meat in the middle of one side, fold the other over it, and pinch it up into a somewhat oval shape, flatten it with your hand at the top, letting the seam be quite at the bottom, rub the tops over with the white of an egg, laid on with a brush, and dust loaf-sugar over them. Bake in a moderate oven. The meat for this cake is made thus:—Beat up a quarter of a

pound of butter until it becomes as the state of cream, then mix with it half a pound of candied orange and lemon-peel; cut fine, one pound of currants, quarter of an ounce of ground cinnamon, and a quarter of an ounce of allspice; mix all well together, and keep in a jar till wanted for use.

**89. RED CURRANT JELLY.**—With three parts of fine ripe red currants mix one of white currants; put them into a clean preserving-pan, and stir them gently over a clear fire until the juice flows from them freely; then turn them into a fine hair-sieve, and let them drain well, but without pressure. Pass the juice through a folded muslin, or a jelly-bag; weigh it, and then boil it fast for a quarter of an hour; add for each pound, eight ounces of sugar coarsely powdered, stir this to it off the fire until it is dissolved, give the jelly eight minutes more of quick boiling, and pour it out. It will be firm, and of excellent colour and flavour. Be sure to clear off the scum as it rises, both before and after the sugar is put in, or the preserve will not be clear. Juice of red currants, three pounds; juice of white currants, one pound: fifteen minutes. Sugar, two pounds: eight minutes. An excellent jelly may be made with equal parts of the juice of red and of white currants, and of raspberries, with the same proportion of sugar and degree of boiling as mentioned in the foregoing receipt.

**90. INDICATIONS-OF WHOLE-SOME MUSHROOMS.**—Whenever a fungus is pleasant in flavour and odour, it may be considered wholesome; if, on the contrary, it have an offensive smell, a bitter, astringent, or styptic taste, or even if it leave an unpleasant flavour in the mouth, it should not be considered fit for food. The colour, figure, and texture of these vegetables do not afford any characters on which we can safely rely; yet it may be remarked that in colour the pure yellow, gold colour, bluish pale, dark or lustre brown, wine red, or the violet, belong to many that are esculent: whilst the

pale or sulphur yellow, bright or blood-red, and the greenish, belong to few but the poisonous. The safe kinds have most frequently a compact, brittle texture; the flesh is white; they grow more readily in open places, such as dry pastures and waste lands, than in places humid or shaded by wood. In general, those should be suspected which grow in caverns and subterranean passages, on animal matter undergoing putrefaction, as well as those whose flesh is soft or watery.

#### 91. GUM ARABIC STARCH.—

Get two ounces of fine white gum arabic, and pound it to powder. Next put it into a pitcher, and pour on it a pint or more of boiling water (according to the degree of strength you desire), and then, having covered it, let it set all night. In the morning, pour it carefully from the dregs into a clean bottle, cork it, and keep it for use. A tablespoonful of gum water stirred into a pint of starch that has been made in the usual manner, will give to lumps (either white or printed) a look of newness to which nothing else can restore them after washing. It is also good (much diluted) for thin white muslin and bobbinet.

92. SEIDLITZ POWDERS.—Seidlitz powders are usually put up in two papers. The larger blue paper contains tartarized soda (also called Rochelle salt) two drachms, and carbonate of soda two scruples; in practice it will be found more convenient to mix the two materials in larger quantity by passing them twice through a sieve, and then divide the mixture either by weight or measure, than to make each powder separately. One pound of tartarized soda, at 1s. 2d. per pound, and five ounces and a half of carbonate of soda, at 4d. per pound, will make sixty powders. The smaller powder, usually put up in white paper, consists of tartaric acid, at 2s. per pound, half a drachm.

*Directions for use.*—Dissolve the contents of blue paper in half a tumbler of cold water, stir in the other powder, and drink during effervescence.

#### MY WIFE'S LITTLE SUPPERS.

93. MEAT CAKES.—Take any cold meat, game, or poultry (if under-done, all the better), mince it fine, with a little fat bacon or ham, or an anchovy; season it with a little pepper and salt; mix well, and make it into small cakes three inches long, half as wide, and half an inch thick: fry these a light brown, and serve them with good gravy, or put into a mould, and boil or bake it. N.B. Bread-crumbs, hard yolks of eggs, onions, sweet herbs, savoury spices, zest, or curry-powder, or any of the forcemeats.

94. OYSTER PATTIES.—Roll out puff paste a quarter of an inch thick, cut it into squares with a knife, sheet eight or ten patty pans, put upon each a bit of bread the size of half a walnut; roll out another layer of paste of the same thickness, cut it as above, wet the edge of the bottom paste, and put on the top, pare them round to the pan, and notch them about a dozen times with the back of the knife, rub them lightly with yolk of egg, bake them in a hot oven about a quarter of an hour: when done, take a thin slice off the top, then with a small knife, or spoon, take out the bread and the inside paste, leaving the outside quite entire; then parboil two dozen of large oysters, strain them from their liquor, wash, beard, and cut them into four, put them into a stew-pan with an ounce of butter rolled in flour, half a gill of good cream, a little grated lemon-peel, the oyster-liquor, free from sediment, reduced by boiling to one half, some cayenne pepper, salt, and a tea-spoonful of lemon-juice; stir it over a fire five minutes, and fill the patties. (See 11.)

95. LOBSTER PATTIES.—Prepare the patties as in the last receipt. Take a hen lobster already boiled—pick the meat from the tail and claws, and chop it fine; put it into a stew-pan with a little of the inside spawn pounded in a mortar till quite smooth, an ounce of fresh butter, half a gill of cream, and half a gill of veal consommé, cayenne pepper, and salt, a tea-spoonful of essence of

anchovy, the same of lemon-juice, and a table-spoonful of flour and water: stew it five minutes. (See 8.)

96. **EGG AND HAM PATTIES.**—Cut a slice of bread two inches thick, from the most solid part of a stale quartern loaf; have ready a tin round cutter, two inches diameter, cut out four or five pieces, then take a cutter two sizes smaller, press it nearly through the larger pieces, then remove with a small knife the bread from the inner circle; have ready a large stew-pan full of boiling lard; fry them of a light brown colour, drain them dry with a clean cloth, and set them by till wanted; then take half a pound of lean ham, mince it small, add to it a gill of good brown sauce; stir it over the fire a few minutes, and put a small quantity of cayenne pepper and lemon-juice: fill the shapes with the mixture, and lay a poached egg upon each.

97. **VEAL AND HAM PATTIES.**—Chop about six-ounces of ready-dressed lean veal, and three ounces of ham very small, put it into a stew-pan with an ounce of butter rolled in flour, half a gill of cream, half a gill of veal stock, a little grated nutmeg and lemon-peel, some cayenne pepper and salt, a spoonful of essence of ham, and lemon-juice, and stir it over the fire some time, taking care it does not burn.

98. **PUFF PASTE.**—To a pound and a quarter of sifted flour rub gently in with the hand half a pound of fresh butter; mix up with half a pint of spring water; knead it well, and set it by for a quarter of an hour; then roll it out thin, lay on it in small pieces three-quarters of a pound more of butter, throw on it a little flour, double it up in folds, and roll it out thin three times, and set it by for about an hour in a cold place. Or, if a more substantial and savoury paste is desired, use the following:—

99. **PASTE FOR MEAT OR SAVOURY PIES.**—Sift two pounds of fine flour to one and a-half of good salt butter, break it into small pieces, and wash it well in cold water; rub gently to-

gether the butter and flour, and mix it up with the yolks of three eggs, beat together with a spoon, and nearly a pint of spring water; roll it out, and double it in folds three times, and it is ready.

100. **CHICKEN AND HAM PATTIES.**—Use the white meat from the breast of the chickens or fowls, and proceed as for veal and ham patties.

101. **PRIME BEEF SAUSAGES.**—Take a pound of lean beef, and half a pound of suet, clean from the skin,—chop it fine as for mince collop, then beat it well with a roller, or in a marble mortar, till it is all well mixed and will stick together—season highly with zest, if you have it, and salt, or any mixed spices you please,—make it into flat round cakes, about an inch thick, and shaped with a cup or saucer, and fry them a light brown. They should be served up on boiled rice, as for curry: if for company, you may do them with eggs and bread crumbs; but they are quite as good without. Or they may be rolled in puff or pie paste, and baked. (See 98 and 99.)

102. **POTATO PUFFS.**—Take cold roast meat, either beef or mutton, or veal and ham, clear it from the gristle, cut it small, and season either with zest, or pepper and salt, and cut pickles—boil and mash some potatoes, and make them into a paste with one or two eggs, roll it out, with a dust of flour, cut it round with a saucer, put some of your seasoned meat on one half, and fold it over like a puff; prick or nick it neatly round, and fry it a light brown. This is the most elegant method of preparing meat that has been dressed before.

103.—**FRIED EGGS AND MINCED HAM OR BACON.**—Choose some very fine bacon streaked with a good deal of lean; cut this into very thin slices, and afterwards into small square pieces; throw them into a stew-pan, and set it over a gentle fire, that they may lose some of their fat. When as much as will freely come is thus melted from them, lay them on a warm dish.

Put into a stew-pan a ladleful of melted bacon or lard; set it on a stove; put in about a dozen of the small pieces of bacon, then stoop the stew-pan and break in an egg. Manage this carefully, and the egg will presently be done: it will be very round, and the little dice of bacon will stick to it all over, so that it will make a very pretty appearance. Take care the yolks do not harden: when the egg is thus done, lay it carefully in a warm dish, and do the others.

104. FISH CAKE.—Take the meat from the bones of any kind of cold fish, which latter put with the head and fins into a stew-pan with a pint of water, a little salt, pepper, an onion, and a fagot of sweet herbs to stew for gravy. Mince the meat, and mix it well with crumbs of bread and cold potatoes equal parts, a little parsley and seasoning. Make into a cake, with the white of an egg, or a little butter or milk; egg it over, and cover with bread crumbs, then fry a light brown. Pour the gravy over, and stew gently for fifteen minutes, stirring it carefully twice or thrice. Serve hot, and garnish with slices of lemon, or parsley.

105. MARBLED GOOSE.—The following, though scarcely pertaining to "My Wife's Little Suppers," is too delicious a relish to be overlooked. It is suitable for larger supper parties, or as a stock dish for families where visitors are frequent. It is also excellent for breakfasts, or for pic-nics.—Take a fine mellow ox-tongue out of pickle, cut off the root and horny part at the tip, wipe dry, and boil till it is quite tender; then peel it, cut a deep slit in its whole length, and lay a fair proportion of the following mixture within it:—Mace half an ounce, nutmeg half an ounce, cloves half an ounce, salt two table-spoonfuls, and twelve Spanish olives. The olives should be stoned, and all the ingredients well pounded and mixed together. Next take a barn-door fowl and a good large goose, and bone them. Lay the tongue inside the fowl, rub the latter outside with the

seasoning, and having ready some slices of ham divested of the rind, wrap them tightly round the fowl; put these inside the goose, with the remainder of the seasoning, sew it up, and make all secure and natural shape with a piece of new linen and tape. Put it in an earthen pan or jar just large enough to hold it, with plenty of clarified butter, and bake it two hours and a half in a slow oven; then take it out, and when cold take out the goose and set it in a sieve; take off the butter and hard fat, which put by the fire to melt, adding, if required, more clarified butter. Wash and wipe out the pan, put the bird again into it, and take care that it is well covered with the warm butter; then tie the jar down with bladder and leather. It will keep thus for a long time. When wanted for the table, the jar should be placed in a tub of hot water so as to melt the butter, the goose then can be taken out, the cloth taken off it, and sent to table cold.

106. OYSTER PIE.—The following directions may be safely relied upon. Take a large dish, butter it, and spread a rich paste over the sides and round the edge, but not at the bottom. The oysters should be fresh, and as large and fine as possible. Drain off part of the liquor from the oysters. Put them into a pan, and season them with pepper, salt, and spice. Stir them well with the seasoning. Have ready the yolks of eggs, chopped fine, and the grated bread. Pour the oysters (with as much of their liquor as you please), into the dish that has the paste in it. Strew over them the chopped egg and grated bread. Roll out the lid of the pie, and put it on, crimping the edges handsomely. Take a small sheet of paste, cut it into a square, and roll it up. Cut it with a sharp knife into the form of a double tulip. Make a slit in the centre of the upper crust, and stick the tulip in it. Cut out eight large leaves of paste, and lay them on the lid. Bake the pie in a quick oven.

107. SALAD.—This is a point of pro-

fiency which it is easy to attain with care. The main point is, to incorporate the several articles required for the sauce, and to serve up at table as fresh as possible. The herbs should be "morning gathered," and they will be much refreshed by laying an hour or two in spring water. Careful picking, and washing, and drying in a cloth, in the kitchen, are also very important, and the due proportion of each herb requires attention. The sauce may be thus prepared:—Boil two eggs for ten or twelve minutes, and then put them in cold water for a few minutes, so that the yolks may become quite cold and hard. Rub them through a coarse sieve with a wooden spoon, and mix them with a tablespoonful of water or cream and then add two tablespoonfuls of fine flax oil, or melted butter; mix, and add by degrees, a teaspoonful of salt, and the same quantity of mustard; mix till smooth, when incorporate with the other ingredients about three tablespoonfuls of vinegar; then pour this sauce down the side of the salad-bowl, but do not stir up the salad till wanted to be eaten. Garnish the top of the salad with the white of the eggs, cut in slices; or these may be arranged in such manner as to be ornamental on the table. Some persons may fancy they are able to prepare a salad without previous instruction, but, like everything else, a little knowledge in this case may not be thrown away.

108. USE OF FRUIT.—Instead of standing in any fear of a generous consumption of ripe fruits, we regard them as positively conducive to health. The very maladies commonly assumed to have their origin in the free use of apples, peaches, cherries, melons, and wild berries, have been quite as prevalent, if not equally destructive, in seasons of scarcity. There are so many ~~erroneous~~ notions entertained of the bad effects of fruit, that it is quite time a counteracting impression should be promulgated, having its foundation in common sense, and based on the com-

mon observation of the intelligent. We have no patience in reading the endless rules to be observed in this particular department of physical comfort. No one, we imagine, ever lived longer or freer from the paroxysms of disease, by discarding the delicious fruits of the land in which he finds a home. On the contrary, they are necessary to the preservation of health, and are therefore caused to make their appearance at the very time when the condition of the body, operated upon by the deteriorating causes not always understood, requires their grateful, renovating influences.

109. DAUGHTERS.—Mothers, who wish not only to discharge well their own duties in the domestic circle, but to train up their daughters at a later day to make happy and comfortable firesides for their families, should watch well, and guard well, the notions which they imbibe and with which they grow up. There will be so many persons ready to fill their young heads with false and vain fancies, and there is so much always afloat in society opposed to duty and common sense, that if mothers do not watch well, they may contract ideas very fatal to their future happiness and usefulness, and hold them till they grow into habits of thought or feeling. A wise mother will have her eyes open, and be ready for every case. A few words of common, downright, respectable, practical sense, timely uttered by her, may be enough to counteract some foolish idea or belief put into her daughter's head by others, whilst, if it be left unchecked, it may take such possession of the mind that it cannot later be corrected. One main falsity abroad in this age is the notion, that women, unless compelled to it by absolute poverty, are out of place when engaged in domestic affairs. Now, mothers should have a care lest their daughters get hold of this conviction as regards themselves—there is danger of it; the fashion of the day endangers it, and the care that an affectionate family take to keep a girl, during the

time of her education, free from other occupations than those of her tasks or her recreations, also endangers it. It is possible that affection may err in pushing this care too far; for as education means a fitting for life, and as a woman's life is much connected with domestic and family affairs, or ought to be so, if the indulgent consideration of parents abstains from all demands upon the young pupil of the school not connected with her books or her play, will she not naturally infer that the matters with which she is never asked to concern herself are, in fact, no concern to her, and that any attention she ever may bestow on them is not a matter of simple duty, but of grace, or concession, or stooping, on her part? Let mothers avoid such danger. If they would do so, they must bring up their daughters from the first with the idea that in this world it is required to give as well as to receive, to minister as well as to enjoy; that every person is bound to be useful, practically, literally useful, in his own sphere, and that a woman's first sphere is the house, and its concerns and demands. Once really imbued with this belief, and taught to see how much the comfort and happiness of woman herself, as well as of her family, depends on this part of her discharge of duty, and a young girl will usually be anxious to learn all that her mother is disposed to teach, and will be proud and happy to aid in any domestic occupations assigned to her, which need never be made so heavy as to interfere with the peculiar duties of her age, or its peculiar delights. If a mother wishes to see her daughter become a good, happy, and rational woman, never let her admit of contempt for domestic occupations, or even suffer them to be deemed secondary. They may be varied in character by station, but they can never be secondary to a woman.

110. SERVANTS.—There are frequent complaints that, in these days, servants are bad, and apprentices are bad, and dependents and aiding hands

generally are bad. It may be so. But if it is so, what is the inference? In the working of the machine of society, class moves pretty much with class; that is, one class moves pretty much with its equals in the community (equals so far as social station is concerned), and apart from other classes, as much those below as those above itself; but there is one grand exception to this general rule, and that is, in the case of domestic servants. The same holds, though in less degree, with apprentices and assistant hands; and in less degree only, because, in this last case, the difference of grade is slighter. Domestic servants and assistants in business and trade, come most closely and continually into contact with their employers; they are about them from morning to night, see them in every phase of character, in every style of humour, in every act of life. How influence will descend! Conscientiousness is spread, not only by precept but by example, and, so to speak, by contagion, it is spread more widely. Kindness is communicated in the same way. Virtue of every kind acts like an electric shock. Those in contact with its practisers receive the communication of it. The same with qualities and tempers that do no honour to our nature. If servants come to you bad, you may at least improve them; possibly almost change their nature. Here follows, then, a recipe to that effect:—*Recipe for obtaining good servants.*—Let them observe in your conduct to others just the qualities and virtues that you would desire they should possess and practise as respects you. Be uniformly kind and gentle. If you reprove, do so with reason and with temper. Be respectable, and you will be respected by him. Be kind, and you will meet kindness from them. Consider their interests, and they will consider yours. A friend in a servant is no contemptible thing. Be to every servant a friend; and heartless, indeed, will be the servant who does not warm in love to you.

## 111. SCANDAL—LIVE IT DOWN.

SHOULD serious tongues some man's frame,  
To soil and tarnish your good name;

Live it down!

Grow not dishearten'd; 'tis the lot  
Of all men, whether good or not:

Live it down!

Roll not in answer, but be calm;  
For silence yields a rapid balm:

Live it down!

Go not among your friends and say,  
Evil hath fallen on my way:

Live it down!

Far better thus yourself alone  
To suffer, than with friends bemoan  
The trouble that is all your own:

Live it down!

What though men evil call your good!  
So CHRIST himself, misunderstood,  
Was nail'd unto a cross of wood!  
And now shall you, for lesser pain,  
Your inmost soul for ever stain,  
By rendering evil back again?

Live it down!

Oh! if you look to be forgiven,  
Love your own foes, the bitterest even,  
And love to you shall glide from heaven,  
And when shall come the poison'd lie  
Swift from the bow of calumny,  
If you would turn it harmless by,  
And make the venom'd falsehood lie,

Live it down!

## 112. BLACK CURRANT JELLY.

—To each pound of picked fruit, allow one gill of water; set them on the fire in the preserving-pan to scald, but do not let them boil; bruise them well with a silver fork, or wooden beater,—take them off and squeeze them through a hair-sieve; and to every pint of juice allow a pound of loaf or raw sugar: boil it ten minutes.

113. BREAD (CHEAP AND EXCELLENT KIND).—Simmer slowly, over a gentle fire, a pound of rice in three quarts of water, till the rice has become perfectly soft, and the water is either evaporated or imbibed by the rice: let it become cool, but not cold, and mix it completely with four pounds of flour; add to it some salt, and about four table-spoonfuls of yeast. Knead

it very thoroughly; for on this depends whether or not your good materials produce a superior article. Next let it rise well before the fire, make it up into loaves with a little of the flour—which, for that purpose, you must reserve from your four pounds—and bake it rather long. This is an exceedingly good and cheap bread.

114. ECONOMICAL AND NOURISHING BREAD.—Suffer the miller to remove from the flour only the coarse flake bran. Of this bran, boil five or six pounds in four and a-half gallons of water; when the goodness is extracted from the bran, during which time the liquor will waste half or three-quarters of a gallon, strain it and let it cool. When it has cooled down to the temperature of new milk, mix it with fifty-six pounds of flour, and as much salt and yeast as would be used for other bread; knead it exceedingly well; let it rise before the fire, and bake it in small loaves: small loaves are preferable to large ones because they take the heat more equally. There are two advantages in making bread with bran water instead of plain water; the one being that there is considerable nourishment in bran which is thus extracted and added to the bread; the other, that flour imbibes much more of bran water than it does of plain water; so much more, as to give in the bread produced almost a fifth in weight more than the quantity of flour made up with plain water would have done. These are important considerations to the poor. Fifty-six pounds of flour, made with plain water, would produce sixty-nine and a-half pounds of bread; made with bran water, it will produce eighty-three and a-half pounds.

115. SCOURING DROPS FOR REMOVING GREASE.—There are several preparations of this name; one of the best is made as follows: Camphine, or spirits of turpentine, three ounces; essence of lemon, one ounce; mix. Cost: camphine, 8d. per pint; essence of lemon, 8d. per ounce. Scouring drops are

usually put up in small half-ounce phials for sale; these may be obtained at from 9d. to 1s. per dozen.

116. POMATUMS.—For making pomatums, the lard, fat, suet, or marrow used, must be carefully prepared by being melted with as gentle a heat as possible, skimmed, strained, and cleared from the dregs which are deposited on standing.

117. COMMON POMATUM.—Mutton suet, prepared as above, one pound; lard, three pounds; carefully melted together, and stirred constantly as it cools, two ounces of bergamot being added.

118. HARD POMATUM.—Lard and mutton suet carefully prepared, of each one pound; white wax, four ounces; essence of bergamot, one ounce. Cost: lard, 1s. per pound; suet, 6d. per pound; white wax, 2s. 2d. per pound; essence of bergamot, 1s. per ounce.

119. PICKLING EGGS.—If the following pickle were generally known it would be more generally used. We constantly keep it in our family, and find it an excellent pickle to be eaten with cold meat, &c. The eggs should be boiled hard (say ten minutes) and then divested of their shells; when quite cold put them in jars, and pour over them vinegar (sufficient to quite cover them), in which has been previously boiled the usual spices for pickling; tie the jars down tight, with bladder, and keep them till they begin to change colour.

120. WHITE CURRANT JELLY.—White currant jelly is made in the same way as red currant jelly, only it should have double-refined sugar, and not be boiled above ten minutes. White currant jelly should be put through a lawn sieve.

121. ANOTHER RECEIPT FOR WHITE CURRANT JELLY.—After the fruit is stripped from the stalks, put it into the pan, and when it boils run it quickly through a sieve: take a pound of sugar to each pint of juice, and let it boil twenty minutes.

122. POTATOES.—We are all potato eaters (for ourselves we esteem potatoes beyond any other vegetable), yet few persons know how to cook them. Shall we be bold enough to commence our hints by presuming to inform our "grandmothers" how

123. TO BOIL POTATOES.—Put them into a saucepan with scarcely sufficient water to cover them. Directly the skins begin to break, lift them from the fire, and as rapidly as possible pour off every drop of the water. Then place a coarse (we need not say clean) towel over them, and return them to the fire again until they are thoroughly done, and quite dry. A little salt, to taste, should have been added to the water before boiling.

124. POTATOES FRIED WITH FISH.—Take cold fish and cold potatoes. Pick all the bones from the former, and mash the fish and the potatoes together. Form into rolls, and fry with lard until the outsides are brown and crisp. For this purpose, the drier kinds of fish, such as cod, hake, &c., are preferable. Turbot, solea, eels, &c., are not so good. This is an economical and excellent relish. (See 104.)

125. POTATOES MASHED WITH ONIONS.—Prepare some boiled onions, by putting them through a sieve, and mix them with potatoes. Regulate the portions according to taste.

126. POTATO CHEESE CAKES.—One pound of mashed potatoes, quarter of a pound of currants, quarter of a pound of sugar and butter, and four eggs, to be well mixed together; bake them in patty pans, having first lined them with puff paste.

127. POTATO COLCAXON.—Boil potatoes and greens, and spinach, separately; mash the potatoes; squeeze the greens dry; chop them quite fine, and mix them with the potatoes with a little butter, pepper, and salt. Put into a mould, buttering it well first; let it stand in a hot oven for ten minutes.

128. POTATOES ROASTED UNDER MEAT.—Half-boil large potatoes; drain the water; put them into an earthen dish,

or small tin pan, under meat roasting before the fire; baste them with the dripping. Turn them to brown on all sides; send up in a separate dish.

129. **POTATO BALLS RAGOUT.**—Add to a pound of potatoes a quarter of a pound of grated ham, or some sweet herbs, or chopped parsley, an onion or eschalot, salt, pepper, and a little grated nutmeg, and other spice, with the yolk of a couple of eggs; then dress as *potatoes escalloped*.

130. **POTATO SNOW.**—Pick out the whitest potatoes, put them on in cold water; when they begin to crack, strain, and put them in a clean stew-pan before the fire till they are quite dry, and fall to pieces; rub them through a wire sieve or the dish they are to be sent up in, and do not disturb them afterwards.

131. **POTATOES FRIED WHOLE.**—When nearly boiled enough, put them into a stew-pan with a bit of butter, or some clean beef drippings; shake them about often, to prevent burning, till they are brown and crisp; drain them from the fat. It will be an improvement if they are floured and dipped into the yolk of an egg, and then rolled in finely-sifted bread crumbs.

132. **POTATOES FRIED IN SLICES.**—Peel large potatoes, slice them about a quarter of an inch thick, or cut them into shavings, as you would peel a lemon; dry them well in a clean cloth, and fry them in lard or dripping. Take care that the fat and *frying-pan* are quite clean; put it on a quick fire, and as soon as the lard boils, and is still, put in the slices of potato, and keep moving them until they are crisp; take them up, and lay them to drain on a sieve. Send to table with a little salt sprinkled over them.

133. **POTATOES ESCALLOPED.**—Mash potatoes in the usual way; then butter some nice clean scollop-shells, patty-pans, or tea-cups, or saucers; put in your potatoes; make them smooth at the top; cross a knife over them; stew a few fine bread crumbs on them; sprinkle them with a paste-brush with

a few drops of melted butter, and set them in a Dutch oven. When nicely browned on the top, take them carefully out of the shells, and brown on the other side. Cold potatoes may be warmed up this way.

134. **POTATO SCONES.**—Mash boiled potatoes till they are quite smooth, adding a little salt; then knead out the flour, or barley-meal to the thickness required; toast on the griddle, pricking them with a fork to prevent them blistering. When eaten with fresh or salt butter they are equal to crumpets—even superior, and very nutritious.

135. **POTATOE PIE.**—Peel and slice your potatoes very thin into a pie-dish; between each layer of potatoes put a little chopped onion; between each layer sprinkle a little pepper and salt: put in a little water, and cut about two ounces of fresh butter into bits, and lay them on the top; cover it close with paste. The yolks of four eggs may be added; and when baked, a table-spoonful of good mushroom ketchup poured in through a funnel. Another method is to put between the layers small bits of mutton, beef, or pork. In Cornwall, turnips are added. This constitutes (on the Cornish method) a cheap and satisfactory dish for families. (*See 31.*)

136. **GINGER-BEER POWDERS**  
—Blue paper: Carbonate of soda, thirty grains; powdered ginger, five grains; ground white sugar, one drachm to one drachm and a-half; essence of lemon, one drop. Add the essence to the sugar, then the other ingredients. A quantity should be mixed and divided, as recommended for *seidlitz powders*. —White paper. Tartaric acid, thirty grains.

*Directions.*—Dissolve the contents of the blue paper in water; stir in the contents of the white paper, and drink during effervescence. Ginger-beer powders do not meet with such general approbation as lemon and kali, the powdered ginger rendering the liquid slightly turbid.

137. APPLE BREAD.—A very light pleasant bread is made in France by a mixture of apples and flour, in the proportion of one of the former to two of the latter. The usual quantity of yeast is employed as in making common bread, and is beaten with flour and warm pulp of the apples after they have boiled, and the dough is then considered as set; it is then put in a proper vessel, and allowed to rise for eight or twelve hours, and then baked in long loaves. Very little water is requisite: none, generally, if the apples are very fresh.

138. TO MAKE ANCHOVIES.—Procure a quantity of sprats, as fresh as possible; do not wash or wipe them, but just take them as caught, and for every peck of the fish, take two pounds of common salt, quarter of a pound of bay-salt, four pounds of saltpetre, two ounces of sal-prunella, and two pennyworth of cochineal. Pound all these ingredients in a mortar, mixing them well together. Then take stone jars or small kegs, according to your quantity of sprats, and lay a layer of the fish, and a layer of the mixed ingredients alternately, until the pot is full; then press hard down, and cover close for six months, they will then be fit for use. I can vouch for the excellence and cheapness of the anchovies made in this manner. In fact, most of the *fine Gorgona anchovies* sold in the oil and pickle shops are made in this or a similar manner, from British sprats.—An excellent and useful receipt.

139. CEMENT FOR BROKEN CHINA, GLASS, &c.—The following recipe, from experience, we know to be a good one, and, being nearly colourless, it possesses advantages which liquid glue and other cements do not:—Dissolve half an ounce of gum acacia in a wine glass of boiling water; add plaster of Paris sufficient to form a thick paste, and apply it with a brush to the parts required to be cemented together. Several articles upon our toilette table have been repaired most effectually by this recipe. (See 78.)

#### 140. SIGNIFICATIONS OF NAMES.

Aaron, *Hebrew*, a mountain.  
 Abel, *Hebrew*, vanity.  
 Abraham, *Hebrew*, the father of many.  
 Adam, *Hebrew*, red earth.  
 Adolphus, *Saxon*, happiness and help.  
 Albert, *Saxon*, all bright.  
 Alexander, *Greek*, a helper of men.  
 Alfred, *Saxon*, all peace.  
 Ambrose, *Greek*, immortal.  
 Amos, *Hebrew*, a burden.  
 Andrew, *Greek*, courageous.  
 Anthony, *Latin*, flourishing.  
 Archibald, *German*, a bold observer.  
 Arnold, *German*, a maintainer of honour.  
 Arthur, *British*, a strong man.  
 Augustus, } *Latin*, venerable, grand.  
 Augustin, }  
 Baldwin, *German*, a bold winner.  
 Bardolph, *German*, a famous helper.  
 Barnaby, *Hebrew*, a prophet's son.  
 Bartholomew, *Hebrew*, the son of him who made the waters to rise.  
 Beaumont, *French*, a pretty mount.  
 Bede, *Saxon*, prayer.  
 Benjamin, *Hebrew*, the son of a right hand.  
 Bennet, *Latin*, blessed.  
 Bernard, *German*, bear's heart.  
 Bertram, *German*, fair, illustrious.  
 Boniface, *Latin*, a well-doer.  
 Brian, *French*, having a thundering voice.  
 Cadwallader, *British*, valiant in war.  
 Cæsar, *Latin*, adorned with hair.  
 Caleb, *Hebrew*, a dog.  
 Cecil, *Latin*, dim-sighted.  
 Charles, *German*, noble-spirited.  
 Christopher, *Greek*, bearing Christ.  
 Clement, *Latin*, mild-tempered.  
 Conrad, *German*, able counsel.  
 Constantine, *Latin*, resolute.  
 Crispin, *Latin*, having curled locks.  
 Cuthbert, *Saxon*, known famously.  
 Daniel, *Hebrew*, God is Judge.  
 David, *Hebrew*, well-beloved.  
 Denis, *Greek*, belonging to the god of wine.  
 Dunstan, *Saxon*, most high.  
 Edgar, *Saxon*, happy honour.  
 Edmund, *Saxon*, happy peace.  
 Edward, *Saxon*, happy keeper.  
 Edwin, *Saxon*, happy conqueror.  
 Egbert, *Saxon*, ever bright.  
 Elijah, *Hebrew*, God, the Lord.  
 Elisha, *Hebrew*, the salvation of God.  
 Ephraim, *Hebrew*, fruitful.  
 Erasmus, *Greek*, lovely, worthy to be loved.  
 Ernest, *Greek*, earnest, serious.  
 Evan or Ivon, *British*, the same as John.  
 Everard, *German*, well reported.

Eugene, *Greek*, nobly descended.  
 Eustace, *Greek*, standing firm.  
 Ezekiel, *Hebrew*, the strength of God.  
 Felix, *Latin*, happy.  
 Ferdinand, *German*, pure peace.  
 Francis, *German*, free.  
 Frederic, *German*, rich peace.  
 Gabriel, *Hebrew*, the strength of God.  
 Geoffery, *German*, joyful.  
 George, *Greek*, a husbandman.  
 Gerard, *Saxon*, all towardliness.  
 Gideon, *Hebrew*, a breaker.  
 Gilbert, *Saxon*, bright as gold.  
 Giles, *Greek*, a little goat.  
 Godard, *German*, a godly disposition.  
 Godrey, *German*, God's peace.  
 Godwin, *German*, victorious in God.  
 Griffith, *British*, having great faith.  
 Guy, *French*, the mistletoe shrub.  
 Hannibal, *Punic*, a gracious lord.  
 Harold, *Saxon*, a champion.  
 Hector, *Greek*, a stout defender.  
 Henry, *German*, a rich lord.  
 Herbert, *German*, a bright lord.  
 Hercules, *Greek*, the glory of Hera or Juno.  
 Hezekiah, *Hebrew*, cleaving to the Lord.  
 Horatio, *Italian*, worthy to be beheld.  
 Howel, *British*, sound or whole.  
 Hubert, *German*, a bright colour.  
 Hugh, *Dutch*, high, lofty.  
 Humphrey, *German*, domestic peace.  
 Jacob, *Hebrew*, a supplanter.  
 James or Jacques, beguiling.  
 Ingram, *German*, of angelic purity.  
 Joab, *Hebrew*, fatherhood.  
 Job, *Hebrew*, sorrowing.  
 Joul, *Hebrew*, acquiescing.  
 John, *Hebrew*, the grace of the Lord.  
 Jonah, *Hebrew*, a dove.  
 Jonathan, *Hebrew*, the gift of the Lord.  
 Joscelyn, *German*, just.  
 Joseph, *Hebrew*, addition.  
 Josias, *Hebrew*, the fire of the Lord.  
 Joshua, *Hebrew*, a Saviour.  
 Isaac, *Hebrew*, laughter.  
 Lambert, *Saxon*, a fair lamb.  
 Lancelot, *Spanish*, a little lance.  
 Laurence, *Latin*, crowned with laurels.  
 Lazarus, *Hebrew*, destitute of help.  
 Leonard, *German*, like a lion.  
 Leopold, *German*, defending the people.  
 Lewellin, *British*, like a lion.  
 Lewis, *French*, the defender of the people.  
 Lionel, *Latin*, a little lion.  
 Lucius, *Latin*, shielding.  
 Luke, *Greek*, a wood or grove.  
 Mark, *Latin*, a hammer.  
 Martin, *Latin*, martial.

Mathew, *Hebrew*, a gift or present.  
 Maurice, *Latin*, sprung of a Moor.  
 Meredith, *British*, the roaring of the sea.  
 Michael, *Hebrew*, who is like God?  
 Morgan, *British*, a mariner.  
 Mosea, *Hebrew*, drawn out.  
 Nathaniel, *Hebrew*, the gift of God.  
 Neal, *French*, somewhat black.  
 Nicolas, *Greek*, victorious over the people.  
 Noel, *French*, belonging to one's nativity.  
 Norman, *French*, one born in Normandy.  
 Obadiah, *Hebrew*, the servant of the Lord.  
 Oliver, *Latin*, an olive.  
 Orlando, *Italian*, counsel for the land.  
 Osmund, *Saxon*, house peace.  
 Oswald, *Saxon*, ruler of a house.  
 Owen, *British*, well descended.  
 Patrick, *Latin*, a nobleman.  
 Paul, *Latin*, small, little.  
 Percival, *French*, a place in France.  
 Peregrine, *Latin*, outlandish.  
 Peter, *Greek*, a rock or stone.  
 Philip, *Greek*, a lover of horses.  
 Phineas, *Hebrew*, of bold countenance.  
 Ralph, contracted from Radolph, or Randal, or Ranulph, *Saxon*, pure help.  
 Raymund, *German*, quiet peace.  
 Reuben, *Hebrew*, the son of vision.  
 Reynold, *German*, a lover of purity.  
 Richard, *Saxon*, powerful.  
 Robert, *German*, famous in counsel.  
 Roger, *German*, strong counsel.  
 Rowland, *German*, counsel for the land.  
 Rufus, *Latin*, reddish.  
 Solomon, *Hebrew*, peaceable.  
 Samson, *Hebrew*, a little son.  
 Samuel, *Hebrew*, heard by God.  
 Saul, *Hebrew*, desired.  
 Sebastian, *Greek*, to be revered.  
 Simeon, *Hebrew*, hearing.  
 Simon, *Hebrew*, obedient.  
 Stephen, *Greek*, a crown or garland.  
 Swithin, *Saxon*, very high.  
 Theobald, *Saxon*, bold over the people.  
 Theodore, *Greek*, the gift of God.  
 Theodosius, *Greek*, given of God.  
 Theophilus, *Greek*, a lover of God.  
 Thomas, *Hebrew*, a twin.  
 Timothy, *Greek*, a fearer of God.  
 Toby or Tobias, *Hebrew*, the goodness of the Lord.  
 Valentine, *Latin*, powerful.  
 Vincent, *Latin*, conquering.  
 Vivian, *Latin*, living.  
 Walter, *German*, a wood-master.  
 Walwin, *German*, a conqueror.  
 William, *German*, defending many.  
 Zaccheus, *Syriac*, innocent.

Zachary, *Hebrew*, remembering the Lord.  
 Zebedee, *Syriac*, having an inheritance.  
 Zedekiah, *Hebrew*, the justice of the Lord.

Adeline, *German*, a princess.  
 Agatha, *Greek*, good.  
 Agnes, *German*, chaste.  
 Alethea, *Greek*, the truth.  
 Althea, *Greek*, hunting.  
 Alice, Alicia, *German*, noble.  
 Amy, Amella, *French*, a beloved.  
 Anna, Anne, or Hannah, *Hebrew*, gracious.  
 Arabella, *Latin*, a fair altar.  
 Aureola, *Latin*, like gold.  
 Barbara, *Latin*, foreign or strange.  
 Beatrice, *Latin*, making happy.  
 Benedicta, *Latin*, blessed.  
 Bernice, *Greek*, bringing victory.  
 Bertha, *Greek*, bright or famous.  
 Blanche, *French*, fair.  
 Bona, *Latin*, good.  
 Bridget, *Irish*, shining bright.  
 Cassandra, *Greek*, a reformer of men.  
 Catharine, *Greek*, pure or clean.  
 Charity, *Greek*, love, bounty.  
 Charlotte, *French*, all noble.  
 Caroline, *feminine of Carolus*, the *Latin* of Charles, noble-spirited.  
 Chloe, *Greek*, a green herb.  
 Christiana, *Greek*, belonging to Christ.  
 Cecilia, *Latin*, from Cecil.  
 Cicely, a corruption of Cecilia.  
 Clara, *Latin*, clear or bright.  
 Constance, *Latin*, constant.  
 Deborah, *Hebrew*, a bee.  
 Diana, *Greek*, Jupiter's daughter.  
 Dorcas, *Greek*, a wild roe.  
 Dorothy, *Greek*, the gift of God.  
 Eadith, *Saxon*, happiness.  
 Eleanor, *Saxon*, all fruitful.  
 Eliza, Elizabeth, *Hebrew*, the oath of God.  
 Emily, *corrupted from Amelia*.  
 Emma, *German*, a nurse.  
 Esther, Hesther, *Hebrew*, secret.  
 Eve, *Hebrew*, causing life.  
 Eunice, *Greek*, fair victory.  
 Eudoia, *Greek*, prospering in the way.  
 Frances, *German*, free.  
 Gertrude, *German*, all truth.  
 Grace, *Latin*, favour.  
 Hagar, *Hebrew*, a stranger.  
 Helena, *Greek*, alluring.  
 Jane, *softened from Joan*; or,  
 Janne, the *feminine of John*.  
 Janet, Jeannette, little Jane.  
 Joyce, *French*, pleasant.

Isabella, *Spanish*, fair Eliza.  
 Judith, *Hebrew*, praising.  
 Julia, Juliana, *feminine of Julius*.  
 Letitia, *Latin*, joy or gladness.  
 Lois, *Greek*, better.  
 Lucretia, *Latin*, a chaste Roman lady.  
 Lucy, *Latin*, *feminine of Lucius*.  
 Lydia, *Greek*, descended from Lud.  
 Mabel, *Latin*, lovely.  
 Magdalene, Maudlin, *Syriac*, magnificent.  
 Margaret, *German*, a pearl.  
 Martha, *Hebrew*, bitterness.  
 Mary, *Hebrew*, bitter.  
 Maud, Matilda, *Greek*, a lady of honour.  
 Mercy, *English*, compassion.  
 Mildred, *Saxon*, speaking mild.  
 Nest, *British*, the same as Agnes.  
 Nicola, *Greek*, *feminine of Nicolas*.  
 Olympia, *Greek*, heavenly.  
 Orabilia, *Latin*, to be entreated.  
 Parnell, or Petronilla, little Peter.  
 Patience, *Latin*, bearing patiently.  
 Paulina, *Latin*, *feminine of Paulinus*.  
 Penelope, *Greek*, a turkey.  
 Persia, *Greek*, destroying.  
 Philadelphia, *Greek*, brotherly love.  
 Philippa, *Greek*, *feminine of Philip*.  
 Phoebe, *Greek*, the light of life.  
 Phyllis, *Greek*, a green bough.  
 Priscilla, *Latin*, somewhat old.  
 Prudence, *Latin*, discretion.  
 Psyche, *Greek*, the soul.  
 Rachel, *Hebrew*, a lamb.  
 Rebecca, *Hebrew*, fat or plump.  
 Rhode, *Greek*, a rose.  
 Rosamund, *Saxon*, rose of peace.  
 Rosa, *Latin*, a rose.  
 Rosecleer, *English*, a fair rose.  
 Rosabella, *Italian*, a fair rose.  
 Ruth, *Hebrew*, trembling.  
 Sabina, *Latin*, sprung from the Sabines.  
 Salome, *Hebrew*, perfect.  
 Sapphira, *Greek*, like a sapphire stone.  
 Sarah, *Hebrew*, a princess.  
 Sibylla, *Greek*, the counsel of God.  
 Sophia, *Greek*, wisdom.  
 Sophronia, *Greek*, of a sound mind.  
 Susan, Susanna, *Hebrew*, a lily.  
 Tabitha, *Syriac*, a roe.  
 Temperance, *Latin*, moderation.  
 Theodosia, *Greek*, given by God.  
 Tryphosa, *Greek*, delicious.  
 Tryphena, *Greek*, delicate.  
 Vida, *Erse*, *feminine of David*.  
 Ursula, *Latin*, a female bear.  
 Walburg, *Saxon*, gracious.  
 Winifred, *Saxon*, winning peace.  
 Zenobia, *Greek*, the life of Jupiter.

**141. BLACKING (Paste).—**Half a pound of ivory black, half a pound of treacle, half an ounce of powdered alum, one drachm of turpentine, one ounce of sulphuric acid, and two ounces of raw linseed oil. The ivory black and treacle must first be mixed together until thoroughly incorporated; then add the rest of the ingredients. It keeps best in a bladder. This receipt has been used in a friend's family for the last seventeen years, and is much approved.

**142. SUCCEDANEUM.**—Take an old silver thimble, an old silver coin, or other silver article, and with a very fine file, convert it into filings. Sift through gauze, to separate the coarse from the fine particles. Take the finer portion, and mix with sufficient quicksilver to form a stiff amalgam, and while in this state, fill the cavities of decayed teeth. This is precisely the same as the metallic amalgam used by all dentists. The filings of a sixpence would produce as much as is contained in two 2s. 6d. packets sold by the advertising makers of Succedaneums. Quicksilver may be bought at a trifle per half-ounce or ounce, at the chemist's. We have not the slightest hesitation in pronouncing this to be the *best* thing of the kind. Caution. as it turns black under the action of the acids of the mouth, it should be used sparingly for *front* teeth. A tooth should never be filled while it is aching. (See 144.)

**143. LEMONS, WHOLE, FOR DESSERT.**—Take six fine, fresh, well-shaped lemons, cut a hole just round the stalk, and with a narrow spoon scoop out the pippins, and press out the juice, but leave the pulp in the lemons. Put them into a bowl with two or three quarts of spring water, to steep out the bitterness. Leave them three days, changing the water each day; or only two days if you wish them to be very bitter. Strain the juice as soon as squeezed out, boil it with one pound of loaf-sugar (setting the jar into which it was strained in a pan of boiling water fifteen or twenty

minutes); tie it up, *quite hot*, with bladder, and set by till wanted. Taste the water the lemons are lying in at the end of the third day; if not bitter, lift the lemons out into a china-lined pan, pour the water through a strainer upon them, boil gently one or two hours; set by in the pan. Boil again next day until so tender that the head of a large needle will easily pierce the rind. Put in one pound of loaf-sugar, make it just boil, and leave to cool. Next day boil the syrup, and pour it to the lemons; add one pound of sugar, and hot water to supply what was boiled away. Lift out the lemons, and boil the syrup and pour on them again every day for a fortnight, then every three or four days, adding gradually three pounds of sugar. When the lemons look clear and bright, boil the syrup pretty hard, add the lemon juice which had been set by, just-boil, skim; put the lemons into jars, pour the syrup upon them, and tie up the jars *instantly* with bladder.

**144. THE TEETH.**—Dissolve two oz. of borax in three pints of water; before quite cold, add thereto one tea-spoonful of tincture of myrrh and one table-spoonful of spirits of camphor; bottle the mixture for use. One wine-glass of the solution, added to half a pint of tepid water, is sufficient for each application. This solution, applied daily, preserves and beautifies the teeth, extirpates tartarous adhesion, produces a pearl-like whiteness, arrests decay, and induces a healthy action in the gums. (See 142.)

**145. CAMPHORATED DENTIFRICE.**—Prepared chalk, one pound; camphor, one or two drams. The camphor must be finely powdered by moistening it with a little spirits of wine, and then intimately mixed with the chalk. Prepared chalk will cost about 6d., the camphor less than 1d. The present price of camphor is under 3s. per pound.

**146. MYRRH DENTIFRICE.**—Powdered cuttle fish, one pound; powdered myrrh, two ounces. Cuttle fish is 1s. 8d. per pound, powdered myrrh, 3s. 6d. per pound.

**147. COMPOUNDS TO PROMOTE THE GROWTH OF HAIR.**—When the hair falls off from diminished action of the scalp, preparations of cantharides often prove useful; they are sold under the names of Dupuytren's Pomade, Cazenave's Pomade, &c. The following directions are as good as any of the more complicated recipes:—

**148. POMADE AGAINST BALDNESS.**—Beef marrow, soaked in several waters, melted and strained, half a pound; tincture of cantharides (made by soaking for a week one drachm of powdered cantharides in one ounce of proof spirit), one ounce; oil of bergamot, twelve drops. Powdered cantharides, 8d. per ounce; bergamot, 1s. per ounce.

**149. ERASMUS WILSON'S LOTION AGAINST BALDNESS.**—Eau de Cologne, two ounces; tincture of cantharides, two drachms; oil of lavender or rosemary, of each ten drops. These applications must be used once or twice a day for a considerable time; but if the scalp become sore, they must be discontinued for a time, or used at longer intervals.

**150. BANDOLINE OR FIXATURE.**—Several preparations are used, the following are the best:—

No. 1.—Mucilage of clean picked Irish moss, made by boiling a quarter of an ounce of the moss in one quart of water until sufficiently thick, rectified spirit in the proportion of a tea-spoonful to each bottle, to prevent its being mildewed. The quantity of spirit varies according to the time it requires to be kept. Irish moss, 3d. to 4d. per lb.

No. 2. Gum Tragacanth, one drachm and a half; water, half a pint; proof spirit (made by mixing equal parts of rectified spirit and water), three ounces; otto of roses, ten drops; soak for twenty-four hours and strain. Cost: Tragacanth, 3s. 6d. per lb.; rectified spirit, 2s. 6d. per pint; otto of roses, 2s. 6d. per drachm. Bergamot, at 1s. per oz., may be substituted for the otto of roses.

**151. MEDICINES (APERIENT).**—In the springtime of the year the judicious use of aperient medicines is much to be commended.

**152. SPRING APERIENTS.**—For children nothing is better than:—1. Brimstone and treacle; to each tea-cupful of this, when mixed, add a tea-spoonful of cream of tartar. As this sometimes produces sickness, the following may be used:—2. Take of tartrate of soda one drachm and a-half, powdered jalap and powdered rhubarb each fifteen grains, ginger two grains; mix. Dose for a child above five years, one *small* tea-spoonful; above ten years, a *large* tea-spoonful; above fifteen, half the whole, or two tea-spoonfuls; and for a person above twenty, three tea-spoonfuls, or the whole, as may be required by the habit of the person. This medicine may be dissolved in warm water, common or mint tea. This powder can be kept for use in a wide-mouthed bottle, and be in readiness for any emergency. The druggist may be directed to treble or quadruple the quantities as convenient.

**153. APERIENT PILLS.**—To some adults all liquid medicines produce such nausea that pills are the only form in which laxative medicines can be exhibited; the following is a useful formula:—3. Take of compound rhubarb pill a drachm and one scruple, of powdered ipecacuanha six grains, and of extract of hyoscyamus one scruple. Mix and beat into a mass, and divide into twenty-four pills. Take one, or two, or if of a very costive habit, three at bed time.—4. For persons requiring a more powerful purge the same formula, with ten grains of compound extract of colocynth, will form a good purgative pill. The mass receiving this addition must be divided into thirty, instead of twenty-four pills.

**154. BLACK DRAUGHT.**—5. The common aperient medicine known as black draught is made in the following manner:—Take of senna leaves six drachms, bruised ginger half a drachm, sliced

liquorice-root four drachma, boiling water half an imperial pint. Keep this standing on the hob, or near the fire for three hours, then strain, and after allowing it to grow cool, add of sal volatile one drachm and a-half, of tincture of senna, and of tincture of cardamoms, each half an ounce. (This mixture will keep a long time in a cool place.) Dose, a wine-glassful for an adult; two table-spoonfuls for young persons above fifteen years of age. It is not a suitable medicine for children.

165. TONIC APERIENT.—6. Take of Epsom salts one ounce, diluted sulphuric acid one drachm, infusion of quassia chips half an imperial pint, compound tincture of rhubarb two drachms. Half a wine-glassful for a dose twice a day.

166. INFANTS' APERIENT.—7. Take of rhubarb five grains, magnesia three grains, white sugar a scruple, manna five grains; mix. Dose, varying from a piece half the size of a sweet-pea to a piece the size of an ordinary pea.—8. A useful laxative for children is composed of calomel two grains, and sugar a scruple, made into five powders; half of one of these for a child from birth to one year and a-half, and a whole one from that age to five years.

167. FLOUR OF BRIMSTONE is a mild aperient in doses of about a quarter of an ounce; it is best taken in milk. Flour of brimstone, which is also called sublimed sulphur, is generally put up in ounce packets at 1d.; its wholesale price is 4d. per pound.

168. MEDICINE WEIGHTS AND MEASURES.—All medicines are mixed by apothecaries' weight: this must be carefully borne in mind, as the apothecaries' drachm is more than double that of avoirdupois or the common weights. A set of the proper weights may be obtained at any scale-makers; and they will be found to be marked thus:—

5 Grains	•	Scruples thus, ʒ
Drachms thus, ʒ	3	Ounces thus, ʒ

#### APOTHECARIES' WEIGHT.

20 grains make 1 scruple ʒi.

8 scruples „ 1 dram ʒi.

8 drachms „ 1 ounce ʒi.

12 ounces „ 1 pound lb.

Medicines are always purchased wholesale by avoirdupois weight. For compounding liquids an apothecary's glass measure will be found indispensable. A two or three ounce size will be large enough for most purposes.

#### 159. METHOD OF CURING THE STINGS OF BEES AND WASPS.—

The sting of a bee is generally more virulent than that of a wasp, and with some people attended with very violent effects. The sting of a bee is barbed at the end, and, consequently, always left in the wound; that of a wasp is pointed only so that they can sting more than once, which a bee cannot do. When any person is stung by a bee, let the sting, in the first place, be instantly pulled out; for the longer it remains in the wound the deeper it will pierce, owing to its peculiar form, and emit more of the poison. The sting is hollow, and the poison flows through it which is the sole cause of the pain and inflammation. The pulling out of the sting should be done carefully, and with a steady hand, for if any part of it breaks in, all remedies then, in a great measure, will be ineffectual. When the sting is extracted, suck the wounded part, if possible, and very little inflammation, if any, will ensue. If hartshorn drops are immediately afterwards rubbed on the part, the cure will be more complete. All notions of the efficacy of sweet oil, bruised parsley, burnet, tobacco, &c., appear, on various trials, to be totally groundless. On some people, the sting of bees and wasps have no effect, it is therefore of little consequence what remedy they apply to the wound. However, the effect of stings greatly depends on the habit of body a person is of; at one time a sting shall take little or no effect, though no remedy is used, which at another time will be very virulent on the same person. We have had occasion

to test this remedy several times, and can safely avouch its efficacy. The exposure to which persons are subjected during the hot summer months, will no doubt render this advice very useful, its very simplicity making it more acceptable.

**160. PRESERVED PLUMS.**—Cut your plums in half (they must not be quite ripe), and take out the stones. Weigh the plums, and allow a pound of loaf-sugar to a pound of fruit. Crack the stones, take out the kernels and break them in pieces. Boil the plums and kernels very slowly for about fifteen minutes, in as little water as possible. Then spread them on a large dish to cool, and strain the liquor. Next day make your syrup. Melt the sugar in as little water as will suffice to dissolve it (about a gill of water to a pound of sugar), and boil it a few minutes, skimming it till quite clear. Then put in your plums with the liquor, and boil them fifteen minutes. Put them in jars, pour the juice over them warm, and tie them up, when cold with brandy paper. Plums for common use are very good done in treacle. Put your plums into an earthen vessel that holds a gallon, having first slit each plum with a knife. To three quarts of plums put a pint of treacle. Cover them, and set them on hot coals in the chimney corner. Let them stew for twelve hours or more, occasionally stirring them, and renewing the coals. The next day put them up in jars. Done in this manner, they will keep till the next Spring. Syrups may be improved in clearness by adding to the dissolved sugar and water some white of egg very well beaten, allowing the white of one egg to two pounds of sugar. Boil it very hard (adding the egg shell), and skim it well, that it may be quite clear before you put in your fruit. In the season for "preserves," our readers may be glad of the above instructions which have been adopted with great success. Hints about making Preserves, 61, are well worthy of attention. (See also, 39, 61, 89, 112, 120, and 121.)

**161. H OR NO H? THAT IS THE QUESTION.**—Few things point so directly to the want of *cultivation* as the mis-use of the letter H by persons in conversation. We hesitate to assert that this common defect in speaking indicates the absence of *education*—for, to our surprise, we have heard even educated persons frequently commit this common and vulgar error. Now, for the purpose of assisting those who desire to improve their mode of speaking, we intend to tell a little story about our next door neighbour, Mrs. Alexander Hitching,—or, as she frequently styled herself, with an air of conscious dignity, Mrs. *HALEXANDER* 'HITCHING. Her husband was a post captain of some distinction, seldom at home, and therefore Mrs. A. H. (or, as she rendered it, Mrs. *H. I.*) felt it incumbent upon herself to represent her own dignity, and the dignity of her husband also. Well, this Mrs. Hitching was a next door neighbour of ours—a most agreeable lady in many respects, middle aged, good looking, uncommonly fond of talking, of active, almost of fussy habits, very good tempered and good natured, but with a most unpleasant habit of misusing the letter H to such a degree that our sensitive nerves have often been shocked when in her society. But we must beg the reader, if Mrs. H. should be an acquaintance of his, not to breathe a word of our having written this account of her—or there would be no limit to her "indignation." And, as her family is very numerous, it will be necessary to keep the matter as quiet as can be, for it will scarcely be possible to mention the subject anywhere, without "orrifying" some of her relations, and instigating them to make Mrs. H. become our "henemy," instead of remaining, as we wish her to do, our intimate friend.

One morning Mrs. H. called upon me, and asked me to take a walk, saying that it was her object to look out for an 'ouse, as her lease had nearly terminated; and as she had often heard her

dear 'Tching say that he would like to settle in the neighbourhood of 'Ampstead 'Eath, she should like me to assist her by my judgment in the choice of a residence.

"I shall be most happy to accompany you," I said.

"I knew you would," said she: "and I am sure a hour or two in your society will give me pleasure. It's so long since we've had a gossip. Besides which, I want a change of hair."

I glanced at her peruke, and for a moment laboured under the idea that she intended to call at her hairdresser's; but I soon recollected.

"I suppose we had better take the omnibus," she remarked, "and we can get out at the foot of the 'ill."

I assented, and in a few minutes we were in the street; in the line of the omnibus, and one of those vehicles soon appearing—

"Will you 'all it?" inquired she.

So I hailed it at once, and we got in. Now Mrs. H. was so fond of talking that the presence of strangers never restrained her—a fact which I have often had occasion to regret. She was no sooner within the omnibus than she begun remarking upon the inconvenience of such vehicles, because of their smallness, and the insolence of many of the conductors. She thought that the proprietors ought only to ire men upon whose civility they could depend. Then she launched out into larger topics—said she thought that the *Hemperor of Haustria*—(here I endeavoured to interrupt her by asking whether she had any idea of the part of *Hampstead* she would like; but she would complete her remarks by saying)—must be as 'appy as the days are long, now that the *Hempress* had presented him with a *hare* to the throne! (Some of the passengers smiled, and, turning round, looked out of the windows.)

I much wished for our arrival at the spot where we should alight, for she commenced a story about a 'andsome young nephew of hers, who was a distinguished officer of the army. This

was suggested to her, no doubt, by the presence in the omnibus of a fine looking young fellow, with a moustache. She said that at present her nephew was stationed in *Hireland*; but he expected soon to be 'ordered to the *Crimea*.

The gentleman with the moustache seemed much amused, and smilingly asked her whether her nephew was at all ambitious? I saw that he (the gentleman with the moustache) was jesting, and I would have given anything to have been released from the unpleasant predicament I was in. But what was my annoyance when Mrs. H. proceeded to say to this youth, whose face was radiant with humour, that it was the 'ight of her nephew's ambition to serve his country in the hour of need; and then she proceeded to ask her fellow-traveller his opinion of the *hupshot* of the war—remarking that she 'oped it would soon be 'over!

At this moment I felt so nervous that I pulled out my handkerchief, and endeavoured to create a diversion by making a loud nasal noise, and remarking that I thought the wind very cold, when an accident happened which took us all by surprise: one of the large wheels of the omnibus dropped off, and all the passengers were jostled down into a corner; but, fortunately, without serious injury. Mrs. H., however, happening to be under three or four persons, raised a loud cry for "'elp! 'elp!" She was speedily got out, when she assured us that she was not 'urt; but she was in such a state of agitation that she wished to be taken to a chemist's shop, to get some *Haromatic vinegar*, or some *Hoe de Cologne*! The chemist was exceedingly polite to her, for which she said she could never express her obligations—an assertion which seemed to me to be literally true.

She was some time before she resumed her accustomed freedom of conversation; but as we ascended the hill she explained to me that she should like to take the house as tenant from 'ear to 'car!—but

she thought landlords would object to such an agreement, as when they got a good tenant they liked to 'old 'im as long as they could. She expressed an opinion that 'Ampstead must be very 'calthy, because it was so 'igh 'up.

We soon reached the summit of the hill, and turned through a lane which led towards the Heath, and in which villas and cottages were smiling on either side. "Now, there's a 'elegant little place!" she exclaimed, "just suited to my 'ideas—about height rooms, and a 'oriel 'over the 'entrance." But it was not to let—so we passed on.

Presently, she saw something likely to suit her, and as there was a bill in the window, "To be Let—Inquire Within," she gave a loud rat-a-tat-tat at the door.

The servant opened it.

"I see that this 'ouse is to let?"

"Yes, ma'am it is; will you walk in?"

"Ow many rooms are there?"

"Eleven, ma'am; but if you will step in, mistress will speak to you."

A very graceful lady made her appearance at the parlour door, and invited us to step in. I felt exceedingly nervous, for I at once perceived that the lady of the house spoke with that accuracy and taste which is one of the best indications of refinement.

"The house is to let—and a very pleasant residence we have found it."

"'Ave you 'occupied it long?"

"Our family has resided here for more than nine years."

"Then, I suppose, your lease 'as run hout!"

"No! we have it for five years longer; but my brother, who is a clergyman, has been appointed to a living in Yorkshire, and for his sake, and for the pleasure of his society, we desire to remove."

"Well—there's nothing like keeping families together for the sake of 'appiness. Now, there's my poor dear 'Itching"—[here she paused, as if somewhat affected, and some young ladies

who were in the room drew their heads together, and appeared to consult about their needlework; but I saw, by dimples upon their cheeks, which they could not conceal, that they were smiling]—" 'e's 'itherto been 'at 'ome so seldom, that I 've 'ardly 'ever known what 'appiness 'is."

I somewhat abruptly broke in upon the conversation, by suggesting that she had better look through the house, and inquire the conditions of tenancy. We consequently went through the various rooms, and in every one of them she had "an 'objection to this," or "a 'atred for that," or would give "a 'int which might be useful" to the lady when she removed. The young ladies were heard tittering very much as we walked across the staircases, for it generally happened upon these occasions that Mrs. H. broke out, in a loud voice, with her imperfect elocution. I felt so much annoyed, that I determined to cure Mrs. H. of her defective speaking. How I accomplished this apparently hopeless task I will state hereafter. (See 279.)

**162. TO MAKE GINGERBREAD CAKE.**—Take one pound and a-half of treacle, one and a half ounces of ground ginger, half an ounce of carraway seeds, two ounces of allspice, four ounces of orange peel, shred fine; half a pound sweet butter, six ounces blanched almonds, one pound honey, and one and a half ounces carbonate of soda, with as much fine flour as makes a dough of moderate consistence.—*Directions for baking it.*—Make a pit in five pounds flour, then pour in the treacle, and all the other ingredients, creaming the butter; then mix them altogether into a dough, work it well, then put in three quarters of an ounce tartaric acid, and put the dough into a buttered pan, and bake for two hours in a cool oven. To know when it is ready, dip a fork into it, and if it comes out sticky put it in the oven again; if not, it is ready.

163. \*HONEY WATER.—Rectified spirits eight ounces; oil of cloves, oil of bergamot, oil of lavender, of each half a drachm; musk three grains; yellow sanders shavings, four drachms. Digest for eight days; add two ounces each of orange flower water and rose water.

164. A CURE FOR BURNS AND SCALDS.—Four ounces of powdered alum put into a pint of cold water. A piece of rag to be dipped into this liquid, to be applied to the burn or scald—frequently changed during the day. This is a rapid cure.

165. A CURE FOR WEAK AND SORE EYES.—Sulphate of zinc three grains, tincture of opium ten drops, water two ounces. To be applied three or four times a-day.

166. PILLS FOR GOUT AND RHEUMATISM.—Acetic extract of colchicum two grains, powdered ipecacuanha four grains, compound extract of colocynth half a drachm, blue pill four grains. Divide into twelve pills; one to be taken night and morning.

167. A MIXTURE FOR A BAD COLD AND COUGH.—Solution of acetate of ammonia two ounces, ipecacuanha wine two drachms, antimony wine two drachms, solution of muriate of morphine half a drachm, treacle four drachms; water add eight ounces. Two table-spoonfuls to be taken three times a-day.

168. TRUE INDIAN CURRY POWDER.—Turmeric four ounces, coriander seeds eleven ounces, cayenne half an ounce, black pepper five ounces, pimento two ounces, cloves half an ounce, cinnamon three ounces, ginger two ounces, cumin seeds three ounces, shallots one ounce. All these ingre-

dients should be of a fine quality, and recently ground or powdered.

169. LIQUID FOR THE CURE AND PREVENTION OF BALDNESS.—Eau de Cologne two ounces, tincture of cantharides two drachms, oil of rosemary, oil of nutmeg, and oil of lavender, each ten drops. To be rubbed on the bald part of the head every night. (See 147.)

170. CURE FOR TOOTHACHE.—Two or three drops of essential oil of cloves, put upon a small piece of lint or cotton wool, and placed in the hollow of the tooth, which will be found to have the active power of curing the toothache without destroying the tooth or injuring the gums.

171. LAVENDER WATER.—Essence of musk four drachms, essence of ambergris four drachms, oil of cinnamon ten drops, English lavender six drachms, oil of geranium two drachms, spirits of wine twenty ounces. To be all mixed together.

172. LOTION FOR FRECKLES.—Muriate of ammonia, half a drachm; lavender water, two drachms; distilled water, half a pint. Applied with a sponge two or three times a day.

173. AMERICAN TOOTH POWDER. Coral, cuttle fish-bone, dragon's blood, of each eight drachms; burnt alum and red sanders, of each four drachms; orris root, eight drachms; cloves and cinnamon, of each half a drachm; vanilla, eleven grains; rosewood, half a drachm; rose pink, eight drachms. All to be finely powdered and mixed.

174. QUININE TOOTH POWDER.—Rose pink, two drachms; precipitated chalk, twelve drachms; carbonate of magnesia, one drachm; quinine (sulphate), six grains. All to be well mixed together.

175. HOW TO TAKE MARKING INK OUT OF LINEN.—A saturated solution of cyanuret of potassium, applied with a camel's-hair brush. After the marking ink disappears, the linen should be well washed in cold water.

176. HOW TO TAKE INK OUT OF BOARDS.—Strong muriatic acid,

\* The receipts from No. 163 to No. 180 have been forwarded to us by a chemist, with the following remark:—"As you desire for your excellent publication receipts that can be guaranteed, I have the honour of forwarding you some that are daily in use; nor have I found any of them to fail. I can also assure you that they have all had a good trial."—R. F. F., Kennington.

or spirits of salts, applied with a piece of cloth; afterwards well washed with water.

**177. HOW TO TAKE WRITING INK OUT OF PAPER.**—Solution of muriate of tin, two drachms; water, four drachms. To be applied with a camel's-hair brush. After the writing has disappeared, the paper should be passed through water, and dried.

**178. A POSITIVE CURE FOR CORNS.**—The strongest acetic acid, applied night and morning with a camel's-hair brush. In one week the corn will disappear. Soft or hard corns.

**179. PASTILS FOR BURNING.**—Cascarilla bark, eight drachms; gum benzoin, four drachms; yellow sanders, two drachms; styrax, two drachms; olibanum, two drachms; charcoal, six ounces; nitre, one drachm and a half; mucilage of tragacanth, sufficient quantity. Reduce the substances to a powder, and form into a paste with the mucilage, and divide into small cones; then put them into a oven until quite dry.

**180. PILLS FOR A BAD COUGH.** Compound ipecacuanha powder, half a drachm; fresh dried squills, ten grains; ammoniacum, ten grains; sulphate of quinine, six grains; treacle, sufficient quantity to make a mass. Divide into twelve pills; one to be taken night and morning.

**181. BLACKING.**—Blacking is now always made with ivory black, treacle, linseed or sweet oil, and oil of vitriol. The proportions vary in the different directions, and a variable quantity of water is added, as paste or liquid blacking is required; the mode of making being otherwise precisely the same. (141.)

**182. LIQUID BLACKING.**—1. Ivory black and treacle of each one pound, sweet oil and oil of vitriol of each a quarter of a pound. Put the first three together until the oil is perfectly mixed or "*killed*;" then add the oil of vitriol diluted with three times its weight of water, and after standing three hours add one quart of water or sour beer.

2. In larger quantity it may be made as follows: ivory black three cwt., molasses or treacle two cwt., linseed oil three gallons, oil of vitriol twenty pounds, water eighty gallons. Mix as above directed.

**183. PASTE BLACKING.**—1. Ivory black two pounds, treacle one pound, olive oil and oil of vitriol of each a quarter of a pound. Mix as before, adding only sufficient water to form into a paste.

2. In larger quantity: Ivory black three cwt., common treacle two cwt., linseed oil and vinegar bottoms of each three gallons, oil of vitriol twenty-eight pounds, water a sufficient quantity. Cost: Ivory black 1s. per pound, treacle 3d. per pound, linseed oil 8d. per pint, sweet oil 1s. per pint.—*Note.* The ivory black must be very finely ground for liquid blacking, otherwise it settles rapidly. The oil of vitriol is powerfully corrosive when undiluted, but uniting with the lime of the ivory black, it is partly neutralised, and does not injure the leather, whilst it much improves the quality of the blacking.

**184. BEST BLACKING FOR BOOTS AND SHOES.**—Ivory black one and a half ounce, treacle one and a half ounce, sperm oil three drachms, strong oil of vitriol three drachms, common vinegar half a pint. Mix the ivory black, treacle, and vinegar together, then mix the sperm oil and oil of vitriol separately, and add them to the other mixture.

**185. BOOT-TOP LIQUID.**—Oxalic acid and white vitriol of each one ounce, water one and a half pint. To be applied with a sponge to the leather, previously washed, and then washed off again. This preparation is poisonous. Cost: Oxalic acid 1s. 6d. per pound, white vitriol 6d. per pound.

**186. BLACK REVIVER FOR BLACK CLOTH.**—Bruised galls one pound, logwood two pounds, green vitriol half a pound, water five quarts. Boil for two hours, and strain. Used to restore the colour of black cloth. Cost: Galls 1s. 4d. per pound, logwood

2d. per pound, green vitriol 1d. per pound.

187. LIQUID FOR PRESERVING FURS FROM MOTH.—Warm water, one pint; corrosive sublimate, twelve grains. If washed with this, and afterwards dried, furs are safe from moth. Care should be taken to label the liquid —poison. Cost: corrosive sublimate, 3d. per ounce.

188. FRENCH \*POLISHES. — 1. NAPHTHA POLISH. — Shellac, three pounds; wood naphtha, three quarts. Dissolve. Cost: shellac, 6d. to 8d. per pound; naphtha, 1s. 2d. per pint.

189. 2. SPIRIT POLISH. — Shellac, two pounds; powdered mastic and sandarac, of each one ounce; copal varnish, half a pint; spirits of wine, one gallon. Digest in the cold till dissolved. Cost: shellac, 6d. to 8d. per pound; mastic, 1s. per ounce; sandarac, 1d. per ounce; copal varnish, 2s. 6d. per pint; rectified spirit, 2s. 6d. per pint.

#### 190. DEED OF SEPARATION BETWEEN A MAN AND HIS WIFE.—

This indenture, made the — day of — in the year of our Lord, 1853, between Charles B—, of — of the first part, Anna R— G— (the wife of the said Charles B—), of the second part, and G— R— B— of the third part. Whereas the said Charles B— and Anna R—, his wife, have, for good reasons, determined to live separate and apart from each other, and on that consideration the said Charles B— hath consented to allow unto the said Anna R— B— a clear weekly payment or sum of s. for her maintenance and support during her life in manner hereinafter contained. And whereas the said G— R— B— hath agreed to become a party to these presents, and to enter into the covenant hereinafter contained on his part. Now this indenture witnesseth, that in pursuance of the said agreement, he, the said Charles B—, for himself, his heirs, executors, and administrators, doth

covenant, promise, and agree to, and with the said G— R— B—, his executors, administrators, and assigns, in manner following, that is to say, that he, the said Charles B—, shall and will, from time to time, and at all times hereafter, permit and suffer the said Anna R— B— to live separate and apart from him, the said Charles B—, as if she was sole and unmarried, and in such place and places as to her from time to time shall seem meet; and that he, the said Charles B—, shall not, nor will molest or disturb the said Anna R— B— in her person or manner of living, nor shall, at any time or times hereafter require, or by any means whatever, either by ecclesiastical censures or by taking out citation, or other process, or by commencing or instituting any suit whatsoever, seek or endeavour to compel any restitution of conjugal rights, nor shall not nor will commence or prosecute proceedings of any description against the said Anna R— B— in any ecclesiastical court or elsewhere; nor shall nor will use any force, violence, or restraint to the person of the said Anna R— B—; nor shall or will at any time during the said separation, sue, or cause to be sued, any person or persons whomsoever for receiving, harbouring, lodging, protecting, or entertaining her, the said Anna R— B—, but that she, the said Anna R— B—, may in all things live as if she were a feme sole and unmarried, without the restraint and coercion of the said Charles B—, or any person or persons by his means, consent, or procurement; and also that all the clothes, furniture, and other the personal estate and effects, of what nature or kind soever, now belonging, or at any time hereafter to belong to, or be in the actual possession of her, the said Anna R— B—; and all such sums of money and personal estate as she, the said Anna R— B—, or the said Charles B— in her right, shall or may at any time or times during the said separation acquire or be entitled to at law or in equity, by purchase, gift, will, intestacy,

or otherwise, shall be the sole and separate property of the said Anna R—B—, to manage, order, sell, dispose of, and use the same in such manner, to all intents and purposes, as if she were a feme sole and unmarried. And further, that he, the said Charles B—, his executors or administrators, or some or one of them, shall and will well and truly pay, or cause to be paid, unto the said G—R—B—, his executors, administrators, or assigns, a clear weekly payment or sum of s., on Monday in each and every week during the life of the said Anna R—B—, but in trust for her, the said Anna R—B—, for her separate maintenance and support. And the said G—R—B—, for himself, his heirs, executors, and administrators, doth hereby covenant and agree to, and with the said Charles B—, his executors, administrators, and assigns, that she, the said Anna R—B—, shall not nor will not, at any time or times hereafter, in anywise molest or disturb him, the said Charles B—, or apply for any restitution of conjugal rights, or for alimony, or for any further or other allowance or separate maintenance than the said weekly sum of s. And that he, the said G—R—B—, his heirs, executors, or administrators, shall and will, from time to time, at all times hereafter, save, defend, and keep harmless and indemnify the said Charles B—, his heirs, executors, and administrators, and his and their lands, and tenements, goods and chattels, of, from, and against all and all manner of action and actions, suit and suits, and all other proceedings whatsoever which shall or may at any time hereafter be brought, commenced, or prosecuted against him, the said Charles B—, his heirs, executors, or administrators, or any of them, and also of, from, and against all and every sum and sums of money, costs, damages, and expences which he, the said Charles B—, his executors, administrators, and assigns, shall or may be obliged to pay, or shall or may suffer, sustain, or be put unto for, or by reason, or on account of any

debt or debts which shall, at any time hereafter, during such separation as aforesaid, be contracted by the said Anna R—B—, or by reason, or means, or on account of any act, matter, cause, or thing, whatsoever relating thereto. In witness whereof, the said parties to these presents have hereunto set their hands and seals, the day and year first above written.

[The above has been written for *Enquire Within* by a legal gentleman, whose attention has been devoted to the many unhappy cases of married life, which, judging from the experience of our police courts, appear to be on the increase. It is not generally known that such a deed may be mutually entered into.]

#### 191. HUSBAND AND WIFE.—

Being hints to each other for the good of both, as actually delivered at our own table :—

192. HINTS FOR WIVES.—If your husband occasionally looks a little troubled when he comes home, do not say to him, with an alarmed countenance, "What ails you, my dear!" Don't bother him; he will tell you of his own accord, if need be. Don't rattle a hailstorm of fun about his ears either; be observant and quiet. Don't suppose whenever he is silent and thoughtful that you are of course the cause. Let him alone until he is inclined to talk; take up your hook or your needlework (pleasantly, cheerfully; no pouting—no sullenness), and wait until he is inclined to be sociable. Don't let him ever find a shirt-button missing. A shirt-button being off a collar or wrist-band has frequently produced the first hurricane in married life. Men's shirt-collars never fit exactly—see that your husband's are made as well as possible, and then, if he does fret a little about them, never mind it; men have a prescriptive right to fret about shirt-collars.

193. HINTS FOR HUSBANDS.—If your wife complains that young ladies "now-a-days" are very forward, don't accuse

her of jealousy. A little concern on her part only proves her love for you, and you may enjoy your triumph without saying a word. Don't evince your weakness either, by complaining of every trifling neglect. What though her chair is not set so close to yours as it used to be, or though her knitting and crochet seem to absorb too large a share of her attention, depend upon it that, as her eyes watch the interwinings of the threads, and the manœuvres of the needles as they dance in compliance to her delicate fingers, she is thinking of courting days, love-letters, smiles, tears, suspicions, and reconciliations, by which your two hearts became entwined together in the network of love, whose meshes you can neither of you unravel or escape.

194. HINTS FOR WIVES.—Never complain that your husband pores too much over the newspaper, to the exclusion of that pleasing converse which you formerly enjoyed with him. Don't hide the paper; don't give it to the children to tear; don't be sulky when the boy leaves it at the door; but take it in pleasantly, and lay it down before your spouse. Think what man would be without a newspaper; treat it as a great agent in the work of civilisation, which it assuredly is; and think how much good newspapers have done by exposing bad husbands and bad wives, by giving their errors to the eye of the public. But manage you in this way: when your husband is absent, instead of gossiping with neighbours, or looking into shop windows, sit down quietly, and look over that paper; run your eye over its home and foreign news; glance rapidly at the accidents and casualties; carefully scan the leading articles; and at tea-time, when your husband again takes up the paper, say, "My dear, what an awful state of things there seems to be in India;" or "what a terrible calamity at the Glasgow theatre;" or "trade appears to be flourishing in the north!" and depend upon it down will go the paper. If he has not read the information, he will

hear it all from your lips, and when you have done, he will ask, "Did you, my dear, read Simpson's letter upon the discovery of chloroform?" And whether you did or not, you will gradually get into as cosy a chat as you ever enjoyed; and you will soon discover that, rightly used, the newspaper is the wife's real friend, for it keeps the husband at home, and supplies capital topics for every-day table-talk.

195. HINTS FOR HUSBANDS.—You can hardly imagine how refreshing it is to occasionally call up the recollection of your courting days. How tediously the hours rolled away prior to the appointed time of meeting; how swift they seemed to fly, when met; how fond was the first greeting; how tender the last embrace; how fervent were your vows; how vivid your dreams of future happiness, when, returning to your home, you felt yourself secure in the confessed love of the object of your warm affections. Is your dream realised?—are you so happy as you expected? Why not? Consider whether as a husband you are as fervent and constant as you were when a lover. Remember that the wife's claims to your unremitting regard—great before marriage, are now exalted to a much higher degree. She has left the world for you—the home of her childhood, the fireside of her parents, their watchful care and sweet intercourse have all been yielded up for you. Look then most jealously upon all that may tend to attract you from home, and to weaken that union upon which your temporal happiness mainly depends; and believe that in the solemn relationship of husband is to be found one of the best guarantees for man's honour and happiness.

196. HINTS FOR WIVES.—Perchance you think that your husband's disposition is much changed; that he is no longer the sweet-tempered, ardent lover he used to be. This may be a mistake. Consider his struggles with the world—his everlasting race with the busy competition of trade. What is it makes

him so eager in the pursuit of gain—so energetic by day, so sleepless by night—but his love of home, wife, and children, and a dread that their respectability, according to the light in which he has conceived it, may be encroached upon by the strife of existence. This is the true secret of that silent care which preys upon the hearts of many men; and true it is, that when love is least apparent, it is nevertheless the active principle which animates the heart, though fears and disappointments make up a cloud which obscures the warmer element. As above the clouds there is glorious sunshine, while below are showers and gloom, so with the conduct of man—behind the gloom of anxiety is a bright fountain of high and noble feeling. Think of this in those moments when clouds seem to lower upon your domestic peace, and, by tempering your conduct accordingly, the gloom will soon pass away, and warmth and brightness take its place.

197. HINTS FOR HUSBANDS.—Summer is the season of love! Happy birds mate, and sing among the trees; fishes dart athwart the running streams, and leap from their element in resistless ecstasy; cattle group in peaceful nooks, by cooling streams; even the flowers seem to love as they twine their tender arms around each other, and throw their wild tresses about in beautiful profusion; the happy swain sits with his loved and loving mistress beneath the sheltering oak, whose arms spread out, as if to shield and sanctify their pure attachment. What shall the husband do now, when earth and heaven seem to meet in happy union? Must he still pore over the calculations of the counting-house, or ceaselessly pursue the toils of the work-room—sparing no moment to taste the joys which Heaven measures out so liberally? No! "Come, dear wife, let us once more breathe the fresh air of heaven, and look upon the beauties of earth. The summers are few we may dwell together; we will not give them all to Mammon. Again let our

hearts glow with emotions of renewed love—our feet shall again tread the green sward, and the music of the rustling trees shall mingle in our whisperings of love!"

198.—HINTS FOR WIVES.—"It was I!" "It was not I!" "It was I!" "It was not I!" "Ah!" "Ha!"—Now who's the wiser or the better for this contention for the last word? Does obstinacy establish superiority, or elicit truth? Decidedly not! Woman has always been described as clamouring for the last word: actors, authors, preachers, and philosophers, have agreed in attributing this trait to her, and in censuring her for it. Yet why they should condemn her, unless they wish the matter reversed, and thus committed themselves to the error imputed to her, it were difficult to discover. However, so it is;—and it remains for some one of the sex, by an exhibition of noble example, to aid in sweeping away the unpleasant imputation. The wife who will establish the rule of allowing her husband to have the last word, will achieve for herself and her sex a great moral victory! Is he *right*?—it were a great error to oppose him. Is he *wrong*?—he will soon discover it, and applaud the self-command which bore unvexed his perversity. And gradually there will spring up such a happy fusion of feelings and ideas, that there will be no "last word" to contend about—but a steady and unruffled flow of generous sentiment.

199. HINTS FOR HUSBANDS.—When once a man has established a home, his most important duties have fairly begun. The errors of youth may be overlooked; want of purpose, and even of honour, in his earlier days may be forgotten. But from the moment of his marriage he begins to write his indelible history; not by pen and ink, but by actions—by which he must ever afterwards be reported and judged. His conduct at home; his solicitude for his family; the training of his children; his devotion to his wife; his regard for the great interests of eter-

nity; these are the tests by which his worth will ever afterwards be estimated by all who think or care about him. These will determine his position while living, and influence his memory when dead. He uses well or ill the brief space allotted to him, out of all eternity, to build up a fame founded upon the most solid of all foundations—private worth; and God will judge him, and man judge of him, accordingly.

200. HINTS FOR WIVES.—Don't imagine when you have obtained a husband, that your attention to personal neatness and deportment may be relaxed. Now, in reality, is the time for you to exhibit superior taste and excellence in the cultivation of your address, and the becoming elegance of your appearance. If it required some little care to foster the admiration of a lover—how much more is requisite to keep yourself lovely in the eyes of him, to whom there is now no privacy or disguise—your hourly companion? And if it was due to your lover that you should always present to him, who *proposed* to wed and cherish you, a neat and lady-like aspect; how much more is he entitled to a similar mark of respect, who has *kept his promise with honourable fidelity*, and linked all his hopes of future happiness with yours? If you can manage these matters without appearing to study them, so much the better. Some husbands are impatient of the routine of the toilette, and not unreasonably so—they possess active and energetic spirits, sorely disturbed by any waste of time. Some wives have discovered an admirable facility in dealing with this difficulty; and it is a secret which, having been discovered by some, may be known to all—and is well worth the finding out.

201. HINTS FOR HUSBANDS.—Custom entitles you to be considered the "lord and master" over your household. But don't assume the *master* and sink the *lord*. Remember that noble generosity, forbearance, amiability, and integrity, are among the more lordly attributes of man. As a husband,

therefore, exhibit the true nobility of man, and seek to govern your own household by the display of high moral excellence. A domineering spirit—a fault-finding petulance—impatience of trifling delays—and the exhibition of unworthy passions at the slightest provocation, can add no laurel to your own "lordly" brow, impart no sweetness to home, and call forth no respect from those by whom you may be surrounded. It is one thing to be a *master*—another thing to be a *man*. The latter should be the husband's aspiration; for he who cannot govern himself is ill-qualified to govern another.

202. HINTS TO WIVES.—It is astonishing how much the cheerfulness of a wife contributes to the happiness of home. She is the sun—the centre of a domestic system, and her children are like planets around her, reflecting her rays. How merry the little ones look when the mother is joyous and good-tempered; and how easily and pleasantly her household labours are overcome! Her cheerfulness is reflected everywhere: it is seen in the neatness of her toilette, the order of her table, and even the seasoning of her dishes. We remember hearing a husband say that he could always gauge the temper of his wife by the quality of her cooking: good temper even influenced the seasoning of her soups, and the lightness and delicacy of her pastry. When ill-temper pervades, the pepper is dashed in as a cloud; perchance the top of the pepper-box is included, as a kind of diminutive thunderbolt; the salt is all in lumps; and the spices seem to betake themselves all to one spot in a pudding, as if dreading the frowning face above them. If there be a husband who could abuse the smiles of a really good-tempered wife, we should like to look at him! No, no, such a phenomenon does not exist. Among elements of domestic happiness, the amiability of the wife and mother is of the utmost importance—it is one of the best securities for THE HAPPINESS OF HOME.

## 203. HINTS FOR HOME COMFORTS.

A short needle makes the most expedition in plain sewing.

When you are particular in wishing to have precisely what you want from a butcher's, go and purchase it yourself.

One flannel petticoat will wear nearly as long as two, if turned behind part before, when the front begins to wear thin.

People in general are not aware how very essential to the health of their inmates is the free admission of light into their houses.

A leather strap, with a buckle to fasten, is much more commodious than a cord for a box in general use for short distances; cording and uncording is a nasty job.

There is not any real economy in purchasing cheap calico for gentlemen's night shirts. The calico cuts in holes, and soon becomes bad coloured in washing.

Sitting to sew by candle-light by a table with a dark cloth on it is injurious to the eye-sight. When no other remedy presents itself, put a sheet of white paper before you.

People very commonly complain of indigestion: how can it be wondered at, when they seem by their habit of swallowing their food wholesale, to forget for what purpose they are provided with teeth.

Never allow your servants to put wiped knives on your table, for, generally speaking, you may see that they have been wiped with a dirty cloth. If a knife is brightly cleaned, they are compelled to use a clean cloth.

There is not anything gained in economy by having very young and inexperienced servants at low wages; they break, waste, and destroy more than an equivalent for higher wages, setting aside comfort and respectability.

No article in dress tarnishes so readily as black crape trimmings, and few things injure it more than damp: therefore, to preserve its beauty on bonnets, a lady in nice mourning should

in her evening walks, at all seasons of the year, take as a companion an old parasol to shade her crape.

A piece of oil-cloth (about twenty inches long) is a useful appendage to a common sitting-room. Kept in the closet, it can be available at any time to place jars upon, &c. &c., which are likely to soil your table during the process of dispensing their contents: a wing and duster are harmonious accompaniments to the oil-cloth.

In most families many members are not fond of fat: servants seldom like it—consequently there is frequently much wasted; to avoid which, take off bits of suet fat from beefsteaks, &c., previous to cooking; they can be used for puddings. With good management there need not be any waste in any shape or form.

Nothing looks worse than shabby gloves; and, as they are expensive articles in dress, they require a little management. A good glove will last six cheap ones with care. Do not wear your best gloves to night church—the heat of the gas, &c., gives a moisture to the hands, that spoils the gloves; do not wear them in very wet weather; as carrying umbrellas, and drops of rain, spoil them.

A given quantity of tea is similar to malt—only giving strength to a given quantity of water, as we find therefore any additional quantity is waste. Two small tea-spoonfuls of good black tea, and one three parts full of green, is sufficient to make three teacupfuls agreeable, the water being put in, in a boiling state at once: a second edition of water gives a rapid flavour to tea.

It may sound like being over particular, but we recommend persons to make a practice of fully addressing notes, &c., on all occasions; when, in case of their being dropped by careless messengers (which is not a rare occurrence), it is evident for whom they are intended, without undergoing the inspection of any other parties bearing a similar name.

Children should not be allowed to

ask for the same thing twice. This may be accomplished by parents, teacher, (or whoever may happen to have the management of them), paying attention to their little wants, if proper, at once, when possible. The children should be instructed to understand that when they are not answered immediately, it is because it is not convenient. Let them learn patience by waiting.

We know not of anything attended with more serious consequences than that of sleeping in damp linen. Persons are frequently assured that they have been at a fire for many hours, but the question is as to what sort of fire, and whether they have been properly turned, so that every part may be exposed to the fire. The fear of creasing the linen, we know, prevents many from unfolding it, so as to be what we consider sufficiently aired; but health is of more importance than appearances: with gentleness there need be no fear of want of neatness.

If the weather appears doubtful, always take the precaution of having an umbrella when you go out, particularly in going to church; your thereby avoid incurring one of three disagreeables: in the first place, the chance of getting wet—or encroaching under a friend's umbrella—or being under the necessity of borrowing one, consequently involving the trouble of returning it, and possibly (as is the case nine times out of ten) inconveniencing your friend by neglecting to return it. Those who disdain the use of umbrellas generally appear with shabby hats, tumbled bonnet ribbons, wrinkled silk dresses, &c. &c., the consequence of frequent exposure to unexpected showers, to say nothing of colds taken, no one can tell how.

Exercise in the open air is of the first importance to the human frame, yet how many are in a manner deprived of it by their own want of management of their time! Females with slender means are for the most part destined to in-door occupations, and

have but little time allotted them for taking the air, and that little time is generally sadly encroached upon by the ceremony of dressing to go out. It may appear a simple suggestion, but experience only will show how much time might be redeemed by habits of regularity; such as putting the shawls, cloaks, gloves, shoes, clogs, &c. &c., or whatever is intended to be worn, in readiness, instead of having to search one drawer, then another, for possibly a glove or collar—wait for shoes being cleaned, &c.—and this when (probably) the out-going persons have to return to their employment at a given time. Whereas, if all were in readiness, the preparations might be accomplished in a few minutes, the walk not being curtailed by unnecessary delays.

Eat slowly and you will not over-eat.

Keeping the feet warm will prevent headaches.

Late at breakfast—hurried for dinner—cross at tea.

Between husband and wife little attentions beget much love.

Always lay your table neatly, whether you have company or not.

Put your balls or reels of cotton into little bags, leaving the ends out.

Whatever you may choose to give away, always be sure to *keep your temper*.

Dirty windows speak to the passer-by of the negligence of the inmates.

In cold weather, a leg of mutton improves by being hung three, four, or five weeks.

When meat is hanging, change its position frequently, to equally distribute the juices.

There is much more injury done by admitting visitors to invalids than is generally supposed.

Matches, out of the reach of children, should be kept in every bed-room. They are cheap enough.

Apple and suet dumplings are lighter when boiled in a net than a cloth. Scum the pot well.

When chamber towels get thin in the middle, cut them in two, sew the selvages together, and hem the sides.

When you dry salt for the table, do not place it in the salt-cells until it is cold, otherwise it will harden into a lump.

Never put away plate, knives and forks, &c., uncleaned, or sad inconvenience will arise when the articles are wanted.

Feather-beds should be opened every third year, the ticking well dusted, soaped, and waxed, the feathers dressed and returned.

Persons of defective sight, when threading a needle, should hold it over something white, by which the sight will be assisted.

In mending sheets and shirts, put the pieces sufficiently large, or in the first washing the thin parts give way, and the work is all undone.

Reading by candle-light, place the candle behind you, that the rays may pass over your shoulder on to the book. This will relieve the eyes.

A wire fire-guard, for each fire-place in a house, costs little, and greatly diminishes the risk to life and property. Fix them before going to bed.

In winter, get the work forward by day-light, to prevent running about at night with candles. Thus you escape grease spots, and risks of fire.

Be at much pains to keep your children's feet dry and warm. Don't bury their bodies in heavy flannels and wools, and leave their knees and legs naked.

Apples and pears, cut into quarters, and stripped of the rind, baked with a little water and sugar, and eaten with boiled rice, are capital food for children.

After washing overlook linen, and stitch on buttons, hooks and eyes, &c.; for this purpose keep a "housewife's friend," full of miscellaneous threads, cottons, buttons, hooks, &c.

For ventilation open your windows both at top and bottom. The fresh air rushes in one way, while the foul makes its exit the other. This is letting in your friend and expelling your enemy.

## 204. COOKERY FOR CHILDREN.

205. FOOD FOR AN INFANT.—Take of fresh cow's milk, one tablespoonful, and mix with two tablespoonfuls of hot water; sweeten with loaf-sugar as much as may be agreeable. This quantity is sufficient for once feeding a newborn infant; and the same quantity may be given every two or three hours, not oftener—till the mother's breast affords natural nourishment.

206. MILK FOR INFANTS SIX MONTHS OLD.—Take one pint of milk, one pint of water; boil it, and add one tablespoonful of flour. Dissolve the flour first in half a tea-cupful of water; it must be strained in gradually, and boiled hard twenty minutes. As the child grows older, one third water. If properly made, it is the most nutritious, at the same time the most delicate food that can be given to young children.

207. BROTH. — Made of lamb or chicken, with stale bread toasted, and broken in, is safe and healthy for the dinners of children, when first weaned.

208. MILK. — Fresh from the cow, with a *very* little loaf-sugar, is good and safe food for young children. From three years old to seven, pure milk, into which is crumbled stale bread, is the best breakfast and supper for a child.

209. FOR A CHILD'S LUNCHEON.—Good sweet butter, with stale bread, is one of the most nutritious, at the same time the most wholesome articles of food, that can be given children after they are weaned.

210. MILK PORRIDGE. — Stir four tablespoonfuls of oatmeal, smoothly, into a quart of milk, then stir it quickly into a quart of boiling water, and boil up a few minutes till it is thickened; sweeten with sugar. Oatmeal, where it is found to agree with the stomach, is much better for children, being a fine opener as well as cleanser; fine flour in every shape is the reverse. Where biscuit-powder is in use, let it be made at home; this, at all events, will prevent them getting

the sweepings of the baker's counters, boxes, and baskets. All the left bread in the nursery, hard ends of stale waves, &c., ought to be dried in the oven or screen, and reduced to powder in the mortar.

**211. MEATS FOR CHILDREN.**—Mutton, lamb, and poultry, are the best. Birds and the white meat of fowls, are the most delicate food of this kind that can be given. These meats should be slowly cooked, and no gravy, if made rich with butter, should be eaten by a young child. Never give children hard, tough, half-worked meats, of any kind.

**212. VEGETABLES FOR CHILDREN.**—Eggs, &c.—Their rice ought to be cooked in no more water than is necessary to swell it; their apples roasted, or stewed with no more water than is necessary to steam them; their vegetables so well cooked as to make them require little butter, and less digestion; their eggs boiled slow and soft. The boiling of their milk ought to be directed by the state of their bowels; if flatulent or bilious, a very little curry-powder may be given in their vegetables with good effect—such as turmeric and the warm seeds (not hot peppers) are particularly useful in such cases.

**213. POTATOES AND PEAS.**—Potatoes, particularly some kinds, are not easily digested by children; but this is easily remedied by mashing them very fine, and seasoning them with sugar and a little milk. When peas are dressed for children, let them be seasoned with mint and sugar, which will take off the flatulency. If they are old, let them be pulped, as the skins are perfectly indigestible by children's or weak stomachs. Never give them vegetables less stewed than would pulp through a colander.

**214. RICE PUDDING WITH FRUIT.**—In a pint of new milk put two large spoonfuls of rice, well washed; then add two apples, pared and quartered, or a few currants or raisins. Simmer slowly till the rice is very soft, then

add one egg, beaten, to bind it. Serve with cream and sugar.

**215. PUDDINGS AND PANCAKES FOR CHILDREN.**—Sugar and egg, browned before the fire, or dropped as fritters into a hot frying-pan, without fat, will make them a nourishing meal.

**216. TO PREPARE FRUIT FOR CHILDREN.**—A far more wholesome way than in pies or puddings, is to put apples sliced, or plums, currants, gooseberries, &c., into a stone jar; and sprinkle among them as much sugar as necessary. Set the jar in an oven on a hearth, with a tea-cupful of water to prevent the fruit from burning; or put the jar into a saucepan of water till its contents be perfectly done. Slices of bread or some rice may be put into the jar, to eat with the fruit.

**217. RICE AND APPLES.**—Core as many nice apples as will fill the dish; boil them in light syrup; prepare a quarter of a pound of rice in milk, with sugar and salt; put some of the rice in the dish, and put in the apples, and fill up the intervals with rice, and bake it in the oven till it is a fine colour.

**218. A NICE APPLE CAKE FOR CHILDREN.**—Grate some stale bread, and slice about double the quantity of apples; butter a mould, and line it with sugar paste, and strew in some crumbs, mixed with a little sugar; then lay in apples, with a few bits of butter over them, and so continue till the dish is full; cover it with crumbs, or prepared rice; season with cinnamon and sugar. Bake it well.

**219. FRUITS FOR CHILDREN.**—That fruits are naturally healthy in their season, if rightly taken, no one who believes that the Creator is a kind and beneficent Being can doubt. And yet the use of summer fruits appears often to cause most fatal diseases, especially in children. Why is this? Because we do not conform to the natural laws in using this kind of diet. These laws are very simple and easy to understand. Let the fruit be ripe when you eat it; and eat when you require food. Fruits that have seeds are much healthier than

the stone fruits. But all fruits are better, for very young children, if baked or cooked in some manner, and eaten with bread. The French always eat bread with raw fruit. Apples and winter pears are very excellent food for children, indeed, for almost any person in health; but best when eaten for breakfast or dinner. If taken late in the evening, fruit often proves injurious. The old saying that apples are *gold in the morning, silver at noon, and lead at night*, is pretty near the truth. Both apples and pears are often good and nutritious when baked or stewed, for those delicate constitutions that cannot bear raw fruit. Much of the fruit gathered when unripe, might be rendered fit for food by preserving in sugar. (See 108.)

220. RIPE CURRANTS are excellent food for children. Mash the fruit, sprinkle with sugar, and with good bread let them eat of this fruit freely.

221. BLACKBERRY JAM.—Gather the fruit in dry weather; allow half a pound of good brown sugar to every pound of fruit; boil the whole together gently for an hour, or till the blackberries are soft, stirring and mashing them well. Preserve it like any other jam, and it will be found very useful in families, particularly for children—regulating their bowels, and enabling you to dispense with cathartics. It may be spread on bread, or on puddings, instead of butter; and even when the blackberries are bought, it is cheaper than butter. In the country, every family should preserve, at least, half a peck of blackberries.

222. TO MAKE SENNA AND MANNA PALATABLE.—Take half an ounce, when mixed, senna and manna; put in half a pint of boiling water; when the strength is abstracted, pour into the liquid from a quarter to half a pound of prunes and two large tablespoonfuls of W. I. molasses. Stew slowly until the liquid is nearly absorbed. When cold it can be eaten with bread and butter, without detecting the senna, and is excellent for costive children.

## 223. A MORAL.

I HAD a little spot of ground  
Where blade nor blossom grew,  
Though the bright sunshine all around  
Life-giving radiance threw.  
I mourn'd to see a spot so bare  
Of leaves of healthful green,  
And thought of bowers, and blossoms fair,  
I frequently had seen.

Some seeds of various kinds lay by—  
I knew not what they were—  
But, rudely turning o'er the soil,  
I strew'd them thickly there;  
And day by day I watch'd them spring  
From out the fertile earth,  
And hoped for many a lovely thing  
Of beauty and of worth.

But as I mark'd their leaves unfold  
As weeds before my view,  
And saw how stubbornly and bold  
The thorns and nettles grew—  
I sigh'd to think that I had done  
Unwittingly, a thing,  
That, where a haunted bower should thrive,  
But worthless weeds did bring.

And thus, I mused: the things we do  
With little heed or ken,  
May prove of worthless growth, and strew  
With thorns the paths of men;—  
For little deeds, like little seeds,  
May flowers prove, or noxious weeds!

224. ROCHE'S EMBROCATION FOR HOOPING COUGH.—Olive oil, two ounces; oil of amber, one ounce; oil of cloves, one drachm. Mix. To be rubbed on the chest at bed-time. Cost: olive oil, 1s. per pint; oil of amber, 6s. per pound; oil of cloves, 1s. per ounce.

225. A BLACK MAN'S RECIPE TO DRESS RICE.—Wash him well, much wash in cold water, the rice flour make him stick. Water boil all ready very fast. Throw him in, rice can't burn, water shake him too much. Boil quarter of an hour or little more; rub one rice in thumb and finger, if all rub away him quite done. Put rice in colander, hot water run away; pour cup of cold water on him, put back rice in saucepan, keep him covered near the fire, then rice all ready. Eat him up!

**226. CEMENTS.**—The term cement includes all those substances employed for the purpose of causing the adhesion of two or more bodies, whether originally separate, or divided by an accidental fracture. As the substances that are required to be connected together are exceedingly various, and differ very much in their properties as to texture, &c. &c., and as the conditions under which they are placed, with regard to heat and moisture, are also exceedingly variable, a number of cements, possessed of very different properties, are required; for a cement that answers admirably under one set of circumstances, may be perfectly useless in others. A vast number of cements are known and used in the various arts, but they may all be referred to a few classes; and our object in this paper will be to describe the manufacture and use of the best of each class, and also to state what are the general principles upon which the success or failure of cementing usually depends. The different parts of a solid are held together by an attraction between their several particles, which is termed the attraction of cohesion, or cohesive attraction. The amount of this varies with the substances; thus, the cohesion of the particles of iron to one another is enormously great, whilst that between those of chalk is but small. This attraction acts only when the particles are in the closest possible contact; even air must not be between them. If, after breaking any substance, we could bring the particles into as close contact as before, and remove the air, they would re-unite, and be as strongly connected as ever. But, in general, this is impossible; small particles of grit and dust get between them; the film of interposed air cannot be removed; and thus, however firmly we press the edges of a broken cup together, it remains cracked china still. *Perfectly* flat, clean surfaces, like those of freshly ground plate-glass, may sometimes be made to cohere, so that the two pieces become one, and

cannot be separated without breaking. The attraction of cohesion takes place between the parts of the same substance, and must not be confounded with that of adhesion, which is the attraction of different substances to one another; for example, the particles of a piece of wood are united by cohesive attraction, whilst the union of glue and wood to each other depends on adhesive attraction. And it is important that this distinction be borne in mind, for, in almost all cases, the cohesion between the particles of the cement is very much less than the adhesion of the cement to other bodies; and if torn apart, the connected joint gives way—not by the loosening of the adhesion, but by the layer of cement splitting down the centre. Hence the important rule, that the *less* cement in a joint, the stronger it is. Domestic manipulators usually reverse this, by letting as much cement as possible remain in the joint, which is, therefore, necessarily a weak one. A thick, nearly solid cement, which cannot be pressed out of the joint, is always inferior to a thinner one, of which merely a connecting film remains between the united surfaces. Having thus mentioned the general principles that ought always to be borne in mind, we will now proceed to describe the manufacture and uses of some of the more useful cements.

**227. MOUTH GLUE** affords a very convenient means of uniting papers, and other small light objects; it is made by dissolving, by the aid of heat, pure glue, as parchment glue, or gelatine, with about one quarter or one-third of its weight of coarse brown sugar, in as small a quantity of boiling water as possible; this, when perfectly liquid, should be cast into thin cakes on a flat surface *very* slightly oiled, and as it cools cut up into pieces of a convenient size. When required for use one end may be moistened by the mouth, and is then ready to be rubbed on any substances it may be wished to join; a piece kept in the desk or work-box is exceedingly convenient. (*See 63.*)

228. **PASTE** is usually made by rubbing up flour with cold water and boiling; if a little alum is mixed before boiling it is much improved, being less clammy, working more freely in the brush and thinner, a less quantity is required, and it is therefore stronger. If required in large quantity, as for papering rooms, it may be made by mixing one quatern of flour, one quarter pound of alum, and a little warm water; when mixed, the requisite quantity of boiling water should be poured on whilst the mixture is being stirred. Paste is only adapted to cementing paper; when used it should be spread on one side of the paper, which should then be folded with the pasted side inwards, and allowed to remain a few minutes before being opened and used; this swells the paper, and permits its being more smoothly and securely attached. Kept for a few days, paste becomes mouldy, and after a short time putrid; this inconvenience may be obviated by the use of—

229. **PERMANENT PASTE**, made by adding to each half-pint of flour-paste without alum, fifteen grains of corrosive sublimate, previously rubbed to powder in a mortar, the whole to be well mixed; this, if prevented from drying, by being kept in a covered pot, remains good any length of time, and is therefore convenient; but unfortunately it is extremely poisonous, though its excessively nauseous taste would prevent its being swallowed accidentally; it possesses the great advantage of not being liable to the attacks of insects.

230. **LIQUID GLUE**.—Several preparations were much in vogue a few months since under this title. The liquid glue of the shops is made by dissolving shell-lac in water, by boiling it along with borax, which possesses the peculiar property of causing the solution of the resinous lac. This preparation is convenient from its cheapness and freedom from smell; but it gives way if exposed to long-continued damp, which that made with naphtha resists. Of the use of *common glue* very little need be said;

it should always be prepared in a glue-pot or double vessel, to prevent its being burned, which injures it very materially; the objection to the use of this contrivance is, that it renders it impossible to heat the glue in the inner vessel to the boiling point; this inconvenience can be obviated by employing in the outer vessel some liquid, which boils at a higher temperature than pure water, such as saturated solution of salt (made by adding one-third as much salt as water). This boils at 224° Fahr., 12° above the heat of boiling water, and enables the glue in the inner vessel to be heated to a much higher temperature than when pure water is employed. If a saturated solution of nitre is used, the temperature rises still higher. (See 66.)

231. **LIME AND EGG CEMENT** is frequently made by moistening the edges to be united with white of egg, dusting on some lime from a piece of muslin, and bringing the edges into contact. A much better mode is to slake some freshly burned lime with a small quantity of *boiling* water; this occasions it to fall into a very fine dry powder, if excess of water has not been added. The white of egg used should be intimately and thoroughly mixed, by beating, with an equal bulk of water, and the slaked lime added to the mixture, so as to form a thin paste, which should be used speedily, as it soon sets. This is a valuable cement, possessed of great strength, and capable of withstanding boiling water. Cements made with lime and blood, scraped cheese, or curd, may be regarded as inferior varieties of it. Cracked vessels, of earthenware and glass, may often be usefully, though not ornamentally, repaired by white lead spread on strips of calico, and secured with bands of twine. But, in point of strength, all ordinary cements yield the palm to Jeffery's Patented Marine Glue, a compound of India-rubber, shellac, and coal-tar naphtha. Small quantities can be purchased at most of the tool warehouses, at cheaper rates than it can be made. When se-

plied to china and glass, the substances should be cautiously made hot enough to melt the glue, which should be then rubbed on the edges so as to become fluid, and the parts brought into contact immediately. When well applied, the mended stem of a common tobacco-pipe will break at any other part, in preference to the junction. The colour of the glue unfortunately prevents its being used.

232. THE RED CEMENT, which is employed by instrument makers for cementing glass to metals, and which is very cheap, and exceedingly useful for a variety of purposes, is made by melting five parts of black resin, one part of yellow wax, and then stirring in gradually one part of red ochre or Venetian red, in fine powder, and previously *well dried*. This cement requires to be melted before use, and it adheres better if the objects to which it is applied are warmed. A soft cement, of a somewhat similar character, may be found useful for covering the corks of preserved fruit, and other bottles, and it is made by melting yellow wax with an equal quantity of resin, or of common turpentine (not oil of turpentine, but the resin), using the latter for a very soft cement, and stirring in, as before, some dried Venetian red. Bearing in mind our introductory remarks, it will be seen that the uniting broken substances with a thick cement is disadvantageous, the object being to bring the surfaces as closely together as possible. As an illustration of a right and a wrong way of mending, we will suppose a plaster of Paris figure broken; the wrong way to mend it is by a thick paste of plaster, which makes, not a joint, but a botch. The right way to mend it, is by means of some well-made carpenter's glue, which, being absorbed in the porous plaster, leaves merely a film covering the two surfaces, and, if well done, the figure is stronger there than elsewhere. On carefully reading over our article, we find one useful substance has been omitted, namely, what is termed *mastic*

cement, which is used for making a superior coating to inside walls, and which must not be confounded with the *resin mastic*. It is made by mixing twenty parts of well-washed and sifted sharp sand, with two parts of litharge, and one of freshly burned and slaked quick-lime, in fine *dry* powder. This is made into a putty, by mixing with linseed oil. It sets in a few hours, having the appearance of light stone; and we mention it, as it may be frequently employed with advantage in repairing broken stone-work (as stairs), by filling up the missing parts. The employment of Roman cement, plaster, &c., for masonry work, hardly comes within the limits of Domestic Manipulation.

233. ECONOMICAL DISH. — Cut some pretty fat ham or bacon into slices, and fry of a nice brown; lay them aside to keep warm; then mix equal quantities of potatoes and cabbage, bruised well together, and fry them in the fat left from the ham. Place the mixture at the bottom, and lay the slices of bacon on the top. Cauliflower, or brocoli, substituted for cabbage, is truly delicious; and, to any one possessing a garden, quite easily procured, as those newly blown will do. The dish must be well seasoned with pepper.

234. CURRY POWDER (1). — Take two ounces of turmeric, six ounces of coriander seed, half an ounce of powdered ginger, two drachms of cinnamon, six drachms of cayenne pepper, four drachms of black pepper, one drachm of mace and cloves powdered fine, two drachms of pimento, four drachms of nutmeg, and an ounce and a half of fennel seed; powder finely, mix, dry, and bottle for use.

235. CURRY POWDER (2). — Take of coriander seed and turmeric each six drachms, black pepper four drachms, fennel seed and powdered ginger each two drachms, cayenne pepper half a drachm; powder finely, mix, dry, and bottle for use.

**236. NAMES AND SITUATIONS OF THE JOINTS.**—In different parts of the kingdom the method of cutting up carcasses varies. That which we describe below is the most general, and is known as the English method.

**BEEF.**—*Fore Quarter.*—Fore rib (five ribs); middle rib (four ribs); chuck (three ribs). Shoulder piece (top of fore leg); brisket (lower or belly part of the ribs); clod (fore shoulder blade); neck; shin (below the shoulder); cheek.

*Hind quarter.*—Sirloin; rump; aitch-bone—these are the three divisions of the upper part of the quarter; buttock and mouse-buttock, which divide the thigh; veiny piece, joining the buttock; thick flank and thin flank (belly pieces) and leg. The sirloin and rump of both sides form a baron. *Beef is in season all the year: best in the winter.*

**MUTTON.**—Shoulder; breast (the belly); over which are the loin (chump, or tail end). Loin (best end); and neck (best end); neck (scrag end). A chine is two necks; a saddle two loins; then there are the leg and head. *Mutton is the best in Winter, Spring, and Autumn.*

**LAMB** is cut into fore quarter and hind quarter; a saddle, or loin; neck, breast, leg, and shoulder. *Grass lamb is in season from Easter to Michaelmas; house lamb from Christmas to Lady-day.*

**PORK** is cut into leg, hand, or shoulder; hind-loin; fore-loin; belly-part; spare-rib (or neck); and head. *Pork is in season nearly all the year.*

**VEAL** is cut into neck (scrag end); neck (best end); loin (best end); loin (chump, or tail end); fillet (upper part of hind leg); hind knuckle (which joins the fillet); knuckle of fore leg; blade (bone of shoulder); breast, (best end); breast (brisket end), and hand. *Veal is always in season, but dear in the winter and spring.*

**VENISON** is cut into haunch (or back); neck; shoulder; and breast. *Does venison is best in January, October, November, and December, and buck venison in June, July, August, and September.*

**237.** According to the English method the carcass of beef is disposed of more economically than upon the Scotch plan. The English plan affords better steaks, and better joints for roasting; but the Scotch plan gives a greater variety of pieces for boiling. The names of pieces in the Scotch plan, not found in the English, are the hough, or hind leg; the nineholes, or English buttock; the large and small runner, taken from the rib and chuck pieces of the English plan; the shoulder-lyer, the English shoulder, but cut differently; the spare-rib or fore-sye, the sticking piece, &c. The Scotch also cut the mutton differently.

**OX-TAIL** is much esteemed for purposes of soup; so also is the **CHEEK**. The **TONGUE** is highly esteemed.

**CALVES' HEADS** are very useful for various dishes; so also their **KNUCKLES**, **FEET**, **HEART**, &c.

## 238. II.—RELATIVE ECONOMY OF THE JOINTS.

The round is, in large families, one of the most profitable parts: it is usually boiled, and, like most of the boiling parts of beef, is generally sold in London at a penny per pound less than roasting joints.

The brisket is also a penny a pound less in price than the roasting parts. It is, not so economical a part as the round, having more bone to be weighed with it, and more fat. Where there are children, very fat joints are not desirable, being often disagreeable to them, and sometimes prejudicial, especially if they have a dislike to it. This joint also requires more cooking than many others; that is to say, it requires a double allowance of time to be given for boiling it; it will, when served, be hard and scarcely digestible if no more time be allowed to boil it than that which is sufficient for other joints and meats. When stewed it is excellent; and when cooked fresh (*i. e.* unsalted), an excellent stock for soup may be extracted from it, and yet the meat will serve as well for dinner.

The edgebone, or aitchbone, is not considered to be a very economical joint, the bone being large in proportion to the meat; but the greater part of it, at least, is as good as that of any prime part. It sells at a penny a pound less than roasting joints.

The rump is the part of which the London butcher makes great profit, by selling it in the form of steaks. In the country, as there is not an equal demand for steaks, the whole of it may be purchased as a joint, and at the price of other prime parts. It may be turned to good account in producing many excellent dishes. If salted, it is simply boiled; if used unsalted, it is usually stewed.

The veiny piece is sold at a low price per pound; but, if hung for a day or two, it is very good and very profitable. Where there are a number of servants and children to have an early dinner, this part of beef will be found desirable.

From the leg and shin excellent stock for soup may be drawn; and, if not reduced too much, the meat taken from the bones may be served as a stew with vegetables; or it may be seasoned, pounded with butter, and potted; or chopped very fine, and seasoned with herbs, and bound together by egg and bread crumbs; it may be fried in balls, or in the form of large eggs, and served with a gravy made with a few spoonfuls of the soup.

Of half an ox cheek excellent soup may be made; the meat, when taken from the bones, may be served as a stew.

Roasting parts of beef are the sirloin and the ribs, and these bear in all places the highest price. The most profitable of these two joints at a family table is the ribs. The bones, if removed from the beef before it is roasted, will assist in forming the basis of a soup. When boned, the meat of the ribs is often rolled up, tied with strings, and roasted; and this is the best way of using it, as it enables the carver to distribute equally the

upper part of the meat with the more skinny and fatter parts at the lower end of the bones.

### 239.—III. COOKING.

Ten pounds of beef require from two hours to two hours and a half roasting, eighteen inches from a good clear fire.

Six pounds require one hour and a quarter to one hour and a half, fourteen inches from a good clear fire.

Three ribs of beef, boned and rolled, tied round with paper, will require two hours and a half, eighteen inches from the fire: baste once only.

The first three ribs, of fifteen or twenty pounds, will take three hours or three and a half; the fourth and fifth ribs will take as long, managed in the same way as the sirloin. Paper the fat and the thin part, or it will be done too much, before the thick part is done enough.

When beef is very fat, it does not require basting; if very lean tie it up in greasy paper, and baste frequently and well.

Common cooks are generally fond of too fierce a fire, and of putting things too near to it.

Slow roasting is as advantageous to the tenderness and flavour of meat as slow boiling.

The warmer the weather, and the staler killed the meat is, the less time it will require to roast it.

Meat that is very fat requires more time than other meat.

"In the hands of an expert cook," says Majendie, "alimentary substances are made almost entirely to change their nature, their form, consistence, odour, savour, colour, chemical composition, &c., everything is so modified, that it is often impossible for the most exquisite sense of taste to recognise the substance which makes up the basis of certain dishes. The greatest utility of the kitchen consists in making the food agreeable to the senses, and rendering it easy of digestion."

*Boiling* extracts a portion of the juice

of meat, which mixes with the water, and also dissolves some of its solids; the more fusible parts of the fat melt out, combine with the water, and form soup or broth. The meat loses its red colour, becomes more savoury in taste and smell, and more firm and digestible. If the process is continued *too long*, the meat becomes indigestible, less succulent, and tough.

To boil meat to perfection, it should be done slowly, in plenty of water, replaced by other hot water as evaporation takes place; for, if boiled too quickly, the outside becomes tough; and, not allowing the ready transmission of heat, the interior remains rare.

The loss by boiling varies, according to Professor Donovan, from  $6\frac{1}{4}$  to 16 per cent. The average loss on boiling butcher's meat, pork, hams, and bacon, is 12; and on domestic poultry, is  $14\frac{1}{2}$ .

The loss per cent. on boiling salt beef is 15; on legs of mutton, 10; hams,  $12\frac{1}{2}$ ; salt pork,  $13\frac{1}{2}$ ; knuckles of veal, 8 $\frac{1}{2}$ ; bacon,  $6\frac{1}{2}$ ; turkeys, 16; chickens,  $13\frac{1}{2}$ .

The established rule as regards time, is to allow a quarter of an hour for each pound of meat if the boiling is rapid, and twenty minutes if slow. There are exceptions to this; for instance, ham and pork, which require from twenty to twenty-five minutes per pound, and bacon nearly half an hour. For solid joints allow fifteen minutes for every pound, and from ten to twenty minutes over; though, of course, the length of time will depend much on the strength of the fire, regularity in the boiling, and size of the joint. The following table will be useful as an average of the time required to boil the various articles:—

	H.	M.
A ham, 20 lbs. weight, requires . . .	6	30
A tongue (if dry), after soaking . . .	4	0
A tongue, out of pickle . . .	$2\frac{1}{2}$	to 3 0
A neck of mutton . . .	1	30
A chicken . . .	0	20
A large fowl . . .	0	45
A capon . . .	0	35
A pigeon . . .	0	15

*Roasting*, by causing the contraction of the cellular substance which contains the fat, expels more fat than boiling. The free escape of watery particles in the form of vapour, so necessary to produce flavour, must be regulated by frequent basting with the fat which has exuded from the meat, combined with a little salt and water—otherwise the meat would burn, and become hard and tasteless. A brisk fire at first will, by charring the outside, prevent the heat from penetrating, and therefore should only be employed when the meat is half roasted.

The loss by roasting varies, according to Professor Donovan, from 14 3-5ths to nearly double that rate, per cent. The average loss on roasting butcher's meat is 22 per cent.; and on domestic poultry is  $20\frac{1}{4}$ .

The loss per cent. on roasting beef, viz., on sirloins and ribs together, is 19 1-6th; on mutton, viz., legs and shoulders together, 24 4-5ths; on fore-quarters of lamb, 22 1-3rd; on ducks, 27 1-5th; on turkeys,  $20\frac{1}{4}$ ; on geese,  $19\frac{1}{4}$ ; on chickens, 14 3-5ths. So that it will be seen by comparison with the per centage given of the loss by boiling, that roasting is not so economical; especially when we take into account that the loss of weight by boiling is not actual loss of economic materials, for we then possess the principal ingredients for soups; whereas, after roasting, the fat only remains. The average loss in boiling and roasting together is 18 per cent. according to Donovan, and 28 per cent. according to Wallace—a difference that may be accounted for by supposing a difference in the fatness of the meat, duration and degree of heat, &c., employed.

The time required to roast various articles of food with a clear good fire, is given below:—

	H.	M.
A small capon, fowl, or chicken, requires . . .	0	20
A large fowl . . .	0	45
A capon, full size . . .	0	35
A goose . . .	1	0

	M.	M.
Wild ducks, and grouse . . . .	0	15
Pheasants, and Turkey poults .	0	20
A moderate sized turkey, stuffed .	1	15
Partridges . . . . .	0	25
Quail . . . . .	0	10
A hare, or rabbit . . . . . about	1	0
Beef, ten pounds . . . . .	2	30
Leg of pork, $\frac{1}{2}$ hour for each pound, and above that al- lowance . . . . .	0	20
A chine of pork . . . . .		
A neck of mutton . . . . .	1	30
A haunch of venison . . . . . about	3	30

To roast properly, meat should be put a good distance from the fire, and brought gradually nearer when about half the time required for cooking it has elapsed; it should be basted frequently; and when nearly done, floured to make it look frothed. Old meats do not require so much dressing as young; and if not fat enough, use a little dripping for basting. Veal and mutton requires a little paper put over the fat, to preserve it from being burnt.

If roasting with a spit, be careful to have it well cleaned before running it through the meat, which should be done always in the inferior parts; but in many joints the spit will pass into the bones, and run along them for some distance, so as not to stain or injure the prime part. Balance skewers will frequently be required.

*Broiling* requires a brisk rapid heat, which, by producing a greater degree of change in the affinities of the raw meat than roasting, generates a higher flavour, so that broiled meat is more savoury than roast. The surface becoming charred, a dark-coloured crust is formed, which retards the evaporation of the juices; and, therefore, if properly done, broiled may be as tender and juicy as roasted meat.

*Baking* does not admit of the evaporation of the vapours so rapidly as by the processes of broiling and roasting; the fat is also retained more, and becomes converted by the agency of the heat into an empyreumatic oil, so as to render the meat less fitted for delicate stomachs, and more difficult to digest.

The meat is, in fact, partly boiled in its own confined water, and partly roasted by the dry hot air of the oven.

The loss by baking has not been estimated; and, as the time required to cook many articles must vary with their size, nature, &c., we have considered it better to leave that until giving the receipts for them.

*Frying* is of all methods the most objectionable, from the foods being less digestible when thus prepared, as the fat employed undergoes chemical changes. Olive oil in this respect is preferable to lard or butter. The crackling noise which accompanies the process of frying meat in a pan is occasioned by the explosions of steam formed in fat, the temperature of which is much above 212 degrees. If the meat is very juicy it will not fry well, because it becomes sodden before the water is evaporated; and it will not brown because the temperature is too low to scorch it. To fry fish well the fat should be boiling hot (600 degrees), and the fish *well dried* in a cloth; otherwise, owing to the generation of steam, the temperature will fall so low that it will be boiled in its own steam, and not be browned. Meat, or indeed any article, should be frequently turned and agitated during frying, to promote the evaporation of the watery particles. To make fried things look well, they should be done over *twice* with egg and stale bread crumbs.

To some extent the claims of either process of cooking depends upon the taste of the individual. Some persons may esteem the peculiar flavour of fried meats, while others will prefer broils or stews. It is important, however, to understand the theory of each method of cooking, so that whichever may be adopted, it may be done well. Bad cooking, though by a good method, is far inferior to good cooking by a bad method. Therefore attend to 1972.

240. ALMOND FLAVOUR.—ESSENCE OF PEACH KERNELS.—QUINTESSENCE OF NOYEAU.—Dissolve one ounce of essential oil of bitter almonds in one

pint of spirits of wine. Used as flavouring for cordials, and perfuming pastry. In large quantities exceedingly poisonous. A few drops only should be used, to several pounds of syrups, pastry, &c. Cost: oil of bitter almonds, 1s. per ounce; spirit, 2s. 6d. per pint. Usually sold in quarter or half-ounce bottles at 1s.

241.—FREEZING WITHOUT ICE OR ACIDS.—The use of ice in cooling depends upon the fact of its requiring a vast quantity of heat to convert it from a solid into a liquid state, or, in other words, to melt it, and the heat so required it obtains from those objects with which it may be in contact. A pound of ice requires nearly as much heat to melt it as would be sufficient to make a pound of cold water boiling hot; hence its cooling power is extremely great. But ice does not begin to melt until the temperature is above the freezing point, and therefore it cannot be employed in freezing liquids, &c., but only in cooling them. If, however, any substance is mixed with ice which is capable of causing it to melt more rapidly, and at a lower temperature, a still more intense cooling effect is the result; such a substance is common salt, and the degree of cold produced by the mixture of one part of salt with two parts of snow or pounded ice, is greater than thirty degrees below freezing. In making ice creams and dessert ices, the following articles are required:—Pewter ice-pots with tightly-fitting lids furnished with handles; wooden ice-pails, to hold the rough ice and salt, which should be stoutly made, about the same depth as the ice-pots, and nine or ten inches more in diameter; each should have a hole in the side, fitted with a good cork, in order that the water from the melted ice may be drawn off as required. In addition, a broad spatula, about four inches long, rounded at the end, and furnished with a long wooden handle, is necessary to scrape the frozen cream from the sides of the ice-pot, and for mixing the whole smoothly together.

When making ices, place the mixture of cream and fruit to be frozen, in the ice-pot, cover it with the lid, and put the pot in the ice-pail, which proceed to fill up with coarsely-pounded ice and salt, in the proportion of about one part of salt to three of ice; let the whole remain a few minutes (if covered by a blanket, so much the better), then whirl the pot briskly by the handle for a few minutes, take off the lid, and with the spatula scrape the iced cream from the sides, mixing the whole smoothly; put on the lid, and whirl again, repeating all the operations every few minutes until the whole of the cream is well frozen. Great care and considerable labour are required in stirring, so that the whole cream may be smoothly frozen, and not in hard lumps. When finished, if it is required to be kept any time, the melted ice and salt should be allowed to escape, by removing the cork, and the pail filled up with fresh materials. It is scarcely necessary to add, that if any of the melted ice and salt is allowed to mix with the cream, the latter is spoiled. From the difficulty of obtaining ice in places distant from large towns, and in hot countries, and from the impracticability of keeping it any length of time, or, in fact, of keeping small quantities more than a few hours, its use is much limited, and many have been the attempts to obtain an efficient substitute. For this purpose various salts have been employed, which, when dissolved in water or in acids, absorb a sufficient amount of heat to freeze substances with which they may be placed in contact. We shall not attempt in this article to describe all the various freezing mixtures that have been devised, but speak only of those which have been found practically useful, state the circumstances which have prevented any of them coming into common use, and conclude by giving the composition of the New Freezing Preparation, which is now exported so largely to India, and the composition of which has hitherto never been made public. Many of the freezing

mixtures which are to be found described in books, are incorrectly so named, for although they themselves become colder than freezing, yet they are not sufficiently powerful to freeze any quantity of water, or other substances, when placed in a vessel within them. In order to be efficient as a freezing mixture, as distinguished from a cooling one, the materials used ought to be capable of producing by themselves an amount of cold more than thirty degrees below the freezing point of water, and this the ordinary mixtures will not do. Much more efficient and really freezing mixtures may be made by using acids to dissolve the salts. The cheapest, and perhaps the best, of these for ordinary use, is one which is frequently employed in France, both for making dessert ices, and cooling wines, &c. It consists of coarsely powered glauber salt (sulphate of soda), on which is poured about two-thirds its weight of spirits of salts (muriatic acid). The mixture should be made in a wooden vessel, as that is preferable to one made of metal, which conducts the external heat to the materials with great rapidity; and when the substance to be cooled is placed in the mixture, the whole should be covered with a blanket, a piece of old woollen carpet doubled, or some other non-conducting material, to prevent the access of the external warmth; the vessel used for icing wines should not be too large, that there may be no waste of the freezing mixture. This combination produces a degree of cold thirty degrees below freezing; and if the materials are bought at any of the wholesale druggists or drysalers, it is exceedingly economical. It is open, however, to the very great objection, that the muriatic acid is an exceedingly corrosive liquid, and of a pungent, disagreeable odour; this almost precludes its use for any purposes except that of icing wines.

Another substance, which is free from any corrosive action or unpleasant odour, is the nitrate of ammonia,

which, if simply dissolved in rather less than its own weight of water, reduces the temperature to about twenty-five degrees below freezing. The objections to its use are, that its frigorific power is not sufficiently great to freeze readily; and if it is required to form dessert ices, it is requisite to renew the process at the expiration of a quarter of an hour, a second, or even, if the weather is very hot, and the water used is rather warm, a third or fourth time. Again the nitrate of ammonia is a very expensive salt; even in France, where it is manufactured expressly for this purpose, it is sold at the rate of three francs a pound; and in this country it cannot be obtained under a much higher price. One great recommendation, however, attends its use, namely, that it may be recovered again, and used any number of times, by simply boiling away the water in which it is dissolved, by a gentle fire, until a small portion, on being removed, crystallises on cooling.

If, however, nitrate of ammonia in coarse powder is put into the cooler, and there is then added twice its weight of freshly crushed washing soda, and an equal quantity of the coldest water that can be obtained, an intensely powerful frigorific mixture is the result, the cold often falling to forty degrees below freezing. This is by far the most efficacious freezing mixture that can be made without the use of ice or acids. But, unfortunately, it has an almost insuperable objection, that the nitrate of ammonia is decomposed by the soda, and cannot be recovered by evaporation; this rises the expense to so great a height, that the plan is practically useless.

THE NEW FREEZING PREPARATION WITHOUT ICE OR ACIDS obviates all these objections. It is easy of use, not corrosive in its properties, and capable of being used at any time, at a minute's notice; is easy of transport, being in a solid form, and, moreover, moderate in its cost. In India, to which country it has been exported in

enormous quantities, it has excited the most lively interest, and the Nepaulese princes, when in London, paid the greatest attention to its use. It consists of two powders, the first of which is composed of one part by weight of muriate of ammonia, or sal-ammoniac powder, and intimately mixed with two parts by weight of nitrate of potash, or saltpetre. These quantities are almost exactly in (what is called by chemists) the combining proportions of the two salts, and by reacting on each other, the original compounds are destroyed, and in the place of muriate of ammonia and nitrate of potash, we have nitrate of ammonia and muriate of potash; thus we have succeeded in producing nitrate of ammonia at a cheap rate, accompanied by another salt, the muriate of potash, which also produces considerable cold when dissolved; but this mixture used alone cannot be regarded as a freezing one, although very efficient in cooling. The other powder is formed simply of the best Scotch soda, crushed in a mortar, or by passing through a mill; although, as hitherto prepared, its appearance has been disguised by the admixture of small quantities of other materials, which have, however, tended to diminish its efficacy. The two powders so prepared must be separately kept in closely-covered vessels, and in as cool a place as possible; for if the crushed soda is exposed to the air, it loses the water it contains, and is considerably weakened in power; and if the other mixture is exposed, it attracts moisture from the air, and dissolves in it—becoming useless. To use the mixture, take an equal bulk of the two powders, mix them together by stirring, and *immediately* introduce them into the ice-pail, or vessel in which they are to be dissolved, and pour on as much water (the coldest that can be obtained) as is sufficient to dissolve them; if a pint measure of each of the powders is used, they will require about a pint of water to dissolve them. More water than is necessary should

not be used, as in that case the additional water is cooled instead of the substance that it is wished to freeze. Less than a pint of each powder, and about the same quantity of water, will be found sufficient to ice two bottles of wine, one after the other, in the hottest of weather, if a tub is used of such a size as to prevent the waste of materials.

If the ordinary sal-ammoniac of the shops is used, it will be found both difficult to powder, and expensive; in fact, it is so exceedingly tough, that the only way in which it can be easily divided, except in a drug mill, is by putting as large a quantity of the salt into water which is actually boiling as the latter will dissolve; as the solution cools, the salt crystallises out in the solid form, and if stirred as it cools, it separates in a state of fine division. As this process is troublesome, and as the sal-ammoniac is expensive, it is better to use the crude muriate of ammonia, which is the same substance as sal-ammoniac, but before it has been purified by sublimation. This is not usually kept by druggists, but may be readily obtained of any of the artificial manure merchants, at a very moderate rate; and its purity may be readily tested by placing a portion of it on a red-hot iron, when it should fly off in a vapour, leaving scarcely any residue.

It is hardly necessary to add, that in icing-wines, or freezing, the effect is great in proportion to the coldness of the materials used; therefore, every article employed, *viz.*, the water, tubs, mixtures, &c., should be as cool as possible.

## 242. RECIPES FOR THE MANUFACTURE OF DESSERT ICES, BOTH CREAM AND WATER.

243. STRAWBERRY ICE CREAM.—Take one pint of strawberries, one pint of cream, nearly half a pound of powdered white sugar, the juice of a lemon; mash the fruit through a sieve, and take out the seeds: mix with the other

articles, and freeze: a little new milk added makes the whole freeze more quickly.

244. RASPBERRY ICE CREAM.—The same as strawberry. These ices are often coloured by cochineal, but the addition is not advantageous to the flavour. Strawberry or raspberry jam may be used instead of the fresh fruit, or equal quantities of jam and fruit employed. Of course the quantity of sugar must be proportionately diminished.

245. STRAWBERRY-WATER ICE.—One large pottle of scarlet strawberries, the juice of a lemon, a pound of sugar, or one pint of strong syrup, half a pint of water. Mix, first rubbing the fruit through a sieve, and freeze.

246. RASPBERRY-WATER ICE in the same manner.

247. LEMON-WATER ICE.—Lemon juice and water, each half a pint; strong syrup, one pint; the rind of the lemons should be rasped off before squeezing with lump sugar, which is to be added to the juice; mix the whole; strain after standing an hour, and freeze. Beat up with a little sugar the whites of two or three eggs, and as the ice is beginning to set, work this in with the spatula, which will much improve the consistence and taste.

248. ORANGE-WATER ICE in the same way.

249. FURTHER DIRECTIONS.—Actual quantities—one pound of muriate of ammonia, or sal ammoniac, finely powdered, is to be *intimately* mixed with two pounds of nitrate of potash or saltpetre, also in powder; this mixture we may call No. 1. No. 2 is formed by crushing three pounds of the best Scotch soda. In use, an equal bulk of both No. 1 and No. 2 is to be taken, stirred together, placed in the ice-pail surrounding the ice-pot, and rather less cold water poured on than will dissolve the whole; if one quart of No. 1, and the same bulk of No. 2 are taken, it will require about one quart of water to dissolve them, and the temperature will fall, if the materials used are cool, to nearly thirty degrees below freezing. Those

who fail may trace their want of success to one or other of the following points:—the use of too small a quantity of the preparation; the employment of a few ounces; whereas, in freezing ices, the ice-pot must be entirely surrounded with the freezing material: no one would attempt to freeze with four ounces of ice and salt. Again, too large a quantity of water may be used to dissolve the preparation, when all the excess of water has to be cooled down instead of the substance it is wished to freeze. All the materials used should be pure, and as cool as can be obtained. The ice-pail in which the mixture is made must be of some non-conducting material, as wood, which will prevent the access of warmth from the air; and the ice-pot, in which the liquor to be frozen is placed, should be of pewter, and surrounded nearly to its top by the freezing mixture. Bear in mind that the making of ice-cream, under any circumstances, is an operation requiring considerable dexterity and practice.

250. THE ART OF BEING AGREEABLE.—The true art of being agreeable is to appear well pleased with all the company, and rather to seem well entertained with them than to bring entertainment to them. A man thus disposed, perhaps, may not have much learning, nor any wit; but if he has common sense, and something friendly in his behaviour, it conciliates men's minds more than the brightest parts without this disposition; and when a man of such a turn comes to old age, he is almost sure to be treated with respect. It is true, indeed, that we should not dissemble and flatter in company; but a man may be very agreeable, strictly consistent with truth and sincerity, by a prudent silence where he cannot concur, and a pleasing assent where he can. Now and then you meet with a person so exactly formed to please, that he will gain upon every one that hears or beholds him; this disposition is not merely the gift of nature, but fre-

quently the effect of much knowledge of the world, and a command over the passions.

**251. DESTRUCTION OF RATS.**—The following recipe for the destruction of rats has been communicated by Dr. Ure to the council of the English Agricultural Society, and is highly recommended as the best known means of getting rid of these most obnoxious and destructive vermin. It has been tried by several intelligent persons, and found perfectly effectual.—Malt hog's lard in a bottle plunged in water, heated to about 150 degrees of Fahrenheit; introduce into it half an ounce of phosphorus for every pound of lard; then add a pint of proof-spirit or whiskey; cork the bottle firmly after its contents have been heated to 150 degrees, taking it at the same time out of the water, and agitate smartly till the phosphorus becomes uniformly diffused, forming a milky-looking liquid. This liquid, being cooled, will afford a white compound of phosphorus and lard, from which the spirit spontaneously separates, and may be poured off to be used again, for none of it enters into the combination, but it merely serves to comminute the phosphorus, and diffuse it in very fine particles through the lard. This compound, on being warmed very gently, may be poured out into a mixture of wheat flour and sugar, incorporated therewith, and then flavoured with oil of rhodium, or not, at pleasure. The flavour may be varied with oil of anniseed, &c. This dough, being made into pellets, is to be laid in rat-holes. By its luminousness in the dark, it attracts their notice, and being agreeable to their palates and noses, it is readily eaten, and proves certainly fatal.

**252. ALMOND PUDDING AND SAUCE.**—A large cupful of finely-minced beef suet, a teaspoonful of milk, four ounces of bread-crumbs, four ounces of well-cleaned currants, two ounces of almonds, half a pound of stoned raisins, three well-beaten eggs,

and the whites of other two; sugar, nutmeg, and cinnamon, and a small glass of rum. Butter a shape, and place part of the raisins neatly in rows. Blanche the almonds; reserve the half of them to be placed in rows between the raisins just before serving. Mix all the remaining ingredients well together, put into the shape, and boil three hours. *The Sauce*.—One teaspoonful of milk, and two yolks of eggs well beaten, and some sugar; place on the fire and stir till it *just comes to the boil*; then let it cool. When lukewarm, stir it into a glass of sherry or currant wine, and serve in a sauce tureen. This sauce is a great improvement to the raisin pudding.

**253. STEWED WATER-CRESS.**—The following receipt may be new, and will be found an agreeable and wholesome dish:—Lay the cress in strong salt and water, to clear it from insects. Pick and wash nicely, and stew it in water for about ten minutes; drain and chop, season with pepper and salt, add a little butter, and return it to the stewpan until well heated. Add a little vinegar first before serving; put around it sippets of toast or fried bread. The above, made thin, as a substitute for parsley and butter, will be found an excellent covering for a boiled fowl. There should be more of the cress considerably than of the parsley, as the flavour is much milder.

**254. TO LOOSEN GLASS STOPPERS OF BOTTLES.**—With a feather rub a drop or two of salad oil round the stopper, close to the mouth of the bottle or decanter, which must be then placed before the fire, at the distance of about eighteen inches; the heat will cause the oil to insinuate itself between the stopper and the neck. When the bottle or decanter has grown warm, gently strike the stopper on one side, and then on the other, with any light wooden instrument; then try it with the hand: if it will not yet move, place it again before the fire, adding another drop of oil. After a while strike again as before; and, by persevering in this process,

however tightly it may be fastened in, you will at length succeed in loosening it. This is decidedly the best plan.

**255. ECONOMIC FAMILY PUDDING.**—Bruise with a wooden spoon, through a colander, six large or twelve middle-sized boiled potatoes; beat four eggs, mix with a pint of good milk, stir in the potatoes; sugar and seasoning to taste; butter a dish; bake half an hour. This receipt is simple and economical, as it is made of what is wasted in most families, viz.—cold potatoes, which may be kept two or three days, till a sufficient quantity is collected. It is a weekly dish at our table. A teaspoonful of Scotch chip marmalade makes a delicious seasoning.

**256. PARSNIP WINE.**—Take fifteen pounds of sliced parsnips, and boil until quite soft in five gallons of water; squeeze the liquor well out of them, run it through a sieve, and add three pounds of coarse lump sugar to every gallon of liquor. Boil the whole for three quarters of an hour. When it is nearly cold, add a little yeast on toast. Let it remain in a tub for ten days, stirring it from the bottom every day; then put it into a cask for a year. As it works over, fill it up every day.

**257. TURNIP WINE.**—Take a large number of turnips, pare and slice them; then place in a cider-press, and obtain all the juice you can. To every gallon of juice add three pounds of lump sugar, and half a pint of brandy. Pour into a cask, but do not bung until it has done working; then bung it close for three months, and draw off into another cask; when it is fine, bottle, and cork well.

**258. CASH AND CREDIT.**—If you would get rich, don't deal in bill books. Credit is the "tempter in a new shape." Buy goods on trust, and you will purchase a thousand articles that Cash would never have dreamed of. A shilling in the hand looks larger than ten shillings seen through the perspective of a three months' bill. Cash is practical, while Credit takes horribly to taste and romance. Let Cash buy a

dinner, and you will have a beef-steak flanked with onions. Send Credit to market, and he will return with eight pairs of woodcocks and a peck of mushrooms. Credit believes in diamond pins and champagne suppers. Cash is more easily satisfied. Give him three meals a day, and he don't care much if two of them are made up of roasted potatoes and a little dirty salt. Cash is a good adviser, while Credit is a good fellow to be on visiting terms with. If you want double chins and contentment, do business with Cash.

**259. WHY THE WEDDING-RING IS PLACED ON THE FOURTH FINGER.**—We have remarked on the vulgar error of a vein going from the fourth finger of the left hand to the heart. It is said by Swinburn and others that, therefore, it became the wedding-finger. The priesthood kept up this idea by still keeping it as the wedding-finger, but it was got at through the use of the Trinity; for, in the ancient ritual of English marriages, the ring was placed by the husband on the top of the thumb of the left hand, with the words "In the name of the Father;" he then removed it to the forefinger, saying, "In the name of the Son;" then to the middle finger, adding, "And of the Holy Ghost;" finally, he left it as now, on the fourth finger, with the closing word "Amen."—*The History and Poetry of Finger-rings.*

**260. A ROMAN LADY'S TOILET.**

—The toilet of a Roman lady involved an elaborate and very costly process. It commenced at night, when the face, supposed to have been tarnished by exposure, was overlaid with a poultice composed of boiled or moistened flour, spread on with the fingers. Poppian unguents sealed the lips, and the lady was profusely rubbed with Cerona ointment. In the morning, the poultices and unguents were washed off, a bath of asses' milk imparted a delicate whiteness to the skin, and the pale face was freshened and revived with enamel. The full eyelids, which the Roman lady still knows so well how to use, now

suddenly raising them to reveal a glance of surprise, or of melting tenderness, now letting them drop like a veil over the lustrous eyes,—the full rounded eyelids were coloured within, and a needle, dipped in jetty dye, gave length and sphericity to the eyebrows. The forehead was encircled by a wreath, or fillet, fastened in the luxuriant hair, which rose in front in a pyramidal pile, formed of successive ranges of curls, and giving the appearance of more than ordinary height.

**261. METHOD OF CLEANING PAPER-HANGINGS.**—Cut into eight half quarters a quartern loaf, two days old; it must neither be newer nor staler. With one of these pieces, after having blown off all the dust from the paper to be cleaned, by the means of a good pair of bellows, begin at the top of the room, holding the crust in the hand, and wiping lightly downward with the crumb, about half a yard at each stroke, till the upper part of the hangings is completely cleaned all round. Then go round again, with the like sweeping stroke downwards, always commencing each successive course a little higher than the upper stroke had extended, till the bottom be finished. This operation, if carefully performed, will frequently make very old paper look almost equal to new. Great caution must be used not by any means to rub the paper hard, nor to attempt cleaning it the cross or horizontal way. The dirty part of the bread, too, must be each time cut away, and the pieces renewed as soon as it may become necessary.

**262. TO PREVENT MOTHS.**—In the month of April or May, beat your fur garments well with a small cane or elastic stick, then lap them up in linen, without pressing the fur too hard, and put betwixt the folds some camphor in small lumps; then put your furs in this state in boxes well closed. When the furs are wanted for use, beat them well as before, and expose them for twenty-four hours to the air, which will take away the smell of the camphor.

If the fur has long hair, as bear or fox, add to the camphor an equal quantity of black pepper in powder.

**263. GERMAN YEAST.**—We have repeatedly noticed the fatality of late of attacks of carbuncles, and the prevalence of diseases of that nature, which we were disposed to attribute to the state of the atmosphere, and as arising from much the same cause as the visitation of cholera. A correspondent, however, has thrown some light upon the subject, and we print his statement in the hope that the baking fraternity will be prohibited by law from using the pernicious stuff mentioned. We are protected from the sale of diseased and poisonous meat, and from the adulteration of flour, beer, and other articles, and it is absolutely necessary now that we should be protected from German yeast. Our correspondent says:—"Perhaps not the least important matter on the subject of cookery is to avoid everything calculated to injure the purity of the family bread, whether prepared at home or in the baker's oven, and that this is done to a vast extent (although unconsciously) will be at once apparent from the following statement of facts, upon which the public require to be informed: It is well known that a very large proportion of the bread prepared for family use is raised from what is called German yeast—a noxious compound—imported weekly into Hull in quantities really astounding, and where, I am credibly informed, tons of it are thrown into the sea from having become alive; yet this is used by the great majority of bakers over the kingdom to produce the bread for our vast population, who little suspect the slow poison they are daily and unconsciously consuming, and to which, from discussions in medical societies, and notices in medical journals, it seems extremely probable that the numerous cases of carbuncles and boils, which, within these few years, have proved of so serious and even fatal a character, may owe their origin. It ought to be generally known that this German yeast is

prepared from every species of refuse grain, and especially (where they can obtain it) from that which is wholly unfit for the food of either man or beast, and if in a state of positive putrefaction, so much the more valuable it is for their purpose, running the more rapidly and easily into fermentation." The foregoing remarks having appeared in the *Manchester Guardian*, called forth the annexed contradiction in the *Weekly Dispatch*:—"We have received several letters from the yeast importers of the metropolis, complaining of an article copied from the *Manchester Guardian* into the *Dispatch*, and which stated, that the use of German yeast in the fermentation of bread caused carbuncles and boils on the face and body. The great object of the writers is to show that the yeast is perfectly wholesome, and that instead of being manufactured from putrid rye, it is the sediment of the distillation of Hollands, or Scheidam gin, drawn off by a common tap, and compressed into a solid, without any mixture; in fact, the only difference between the brewers' yeast and German yeast is, that the former is a liquid beer yeast, and the latter a spirit yeast compressed. Messrs. Wilken and Pugh, the yeast importers, inform us—"that the Commissioners of her Majesty's Customs have subjected the yeast to analysis, and use it themselves for the purpose of making their own bread, and that her Majesty herself partakes of bread, rolls, &c., fermented by nothing but German yeast."

#### 264. HOW TO MAKE SEA-WATER.

—There cannot be a question that by far the simplest plan would consist in the evaporation of the sea-water itself in large quantities, preserving the resulting salt in closely-stopped vessels to prevent the absorption of moisture, and vending it in this form to the consumer; the proportion of this dry saline matter being fifty-six ounces to ten gallons of water less three pints. This plan was suggested by Dr. E. Schweitzer, for the extemporaneous formation of sea-water for medicinal

baths. Mr. H. Schweitzer writes me that he has for many years made this compound, in accordance with his cousin's analysis. The proportion ordered to be used is six ounces to the gallon of water, and stirred well until dissolved.

265. HOW TO TAKE CARE OF YOUR HAT.—If your hat is wet, shake it out as much as possible; then brush it with a soft brush as smooth as you can, or with a clean linen cloth or handkerchief; wipe it very carefully, keep the beaver flat and smooth, in the same direction as it was first placed; then, with a small cane, beat the nap gently up, and hang it up to dry in a cool place. When it is dry, lay it on a table, and brush it round several times with a soft brush in the proper direction; and you will find your hat not the least injured by the rain. If the gloss is not quite so high as you wish, take a flat iron, moderately heated, and pass the same two or three times gently over the hat; brush it afterwards, and it will become nearly as handsome as when sent home from the maker.—*To Scour a Hat when the Nap is Clotted, and to take Salt Water out*—Get a hard brush, a basin of hot water (boiling), and some yellow soap; rub a little of the soap lightly on the brush and dip it into the water; brush the hat round with the nap. If you find the nap clotted, do not scrape it with your fingers, as that tears it off, but brush it until it is smooth, and the soap is thoroughly out; then take a piece of wood, or the back of a knife, and scrape it well round; you will find all the dirt come out; then beat it gently with a cane.

266. CURE FOR BURNS.—Of all applications for a burn, we believe that there are none equal to a simple covering of common *wheat-flour*. This is always at hand; and while it requires no skill in using, it produces most astonishing effects. The moisture produced upon the surface of a slight or deep burn is at once absorbed by the flour, and forms a paste which shuts

out the air. As long as the fluid matters continue flowing, they are absorbed and prevented from producing irritation, as they would do, if kept from passing off by oily or resinous applications; while the greater the amount of those absorbed by the flour, the thicker the protective covering. Another advantage of the flour covering is that next to the surface it is kept moist and flexible. It can also be readily washed off, without further irritation in removing. It may occasionally be washed off very carefully, when it has become matted and dry, and a new covering be sprinkled on.

**267. CARE OF LINEN.**—When linen is well dried and laid by for use, nothing more is necessary than to secure it from damp and insects; the latter may be agreeably performed by a judicious mixture of aromatic shrubs and flowers, cut up and sewed up in silken bags, to be interspersed among the drawers and shelves. These ingredients may consist of lavender, thyme, roses, cedar-shavings, powdered sassafras, cassia lignea, &c., into which a few drops of otto of roses, or other strong-scented perfume, may be thrown. In all cases, it will be found more consistent with economy to examine and repair all washable articles, more especially linen, that may stand in need of it, previous to sending them to the laundry. It will also be prudent to have every article carefully numbered, and so arranged, after washing, as to have their regular turn and term in domestic use.

**268. HAIR OILS.**—**ROSE OIL.**—Olive oil, one pint, 1s.; otto of roses, five to sixteen drops, 2s. 6d. per drachm. Essence of bergamot being much cheaper, 1s. per ounce, is usually used instead of the more expensive otto of roses.

**269. RED ROSE OIL.**—The same. The oil coloured before scenting, by steeping in it one drachm of alkanet root with a gentle heat, until the desired tint is produced. Alkanet root, 6d. to 8d. per pound.

**270. HAIR DYE.**—A friend of ours, to whom we applied upon the subject, favoured us with the following information:—I have operated upon my own cranium for at least a dozen years, and though I have heard it affirmed that dying the hair will produce insanity, I am happy to think I am, as yet, perfectly sane, and under no fear of being otherwise; at all events, I am wiser than I once was, when I paid five shillings for what I can now make myself for less than twopence!—but to the question:—I procure lime, which I speedily reduce to powder by throwing a little water upon it, then mix this with litharge (three quarters lime, and a quarter litharge), which I sift through a fine hair sieve, and then I have what is sold at a high price under the name of "Unique Powder," and the most effectual hair dye that has yet been discovered. But the application of it is not very agreeable, though simple enough:—Put a quantity of it in a saucer, pour boiling water upon it, and mix it up with a knife like thick mustard; divide the hair into thin layers, with a comb, and plaster the mixture thickly into the layers to the roots, and all over the hair. When it is all completely covered over with it, then lay all over it a covering of damp blue, or brown paper, then bind over it, closely, a handkerchief, then put on a nightcap over all, and go to bed; in the morning, brush out the powder, wash thoroughly with soap and warm water, then dry, curl, oil, &c. I warrant that hair thus managed will be a permanent and beautiful black, which, I dare say, most people would prefer to either grey or red. Now, notwithstanding the patient endurance and satisfactory experience of our friend, we very much doubt, whether one person in a hundred, would be content to envelope their heads in batter of this description, and then retire to rest. To rest! did we say! We envy not the slumbers enjoyed under these circumstances. We fancy we can do something still better for those who

are ashamed of their grey hairs. The hair dyes formerly used produced very objectionable tints. Latterly several perfumers have been selling dyes, consisting of two liquids to be used in succession, at exceedingly high prices, such as 7s., 14s., and 21s., a case. The composition has been kept a close secret in the hands of a few. The procuring of it for publication in this work has been attended with considerable difficulty, but our readers may take it as an earnest that no pains or expense will be spared to render really useful information.

**271. HAIR DYE, USUALLY STYLED COLOMBIAN, ARGENTINE, &c. &c.**—Solution No. I. Hydrosulphuret of ammonia, one ounce; solution of potash, three drachms; distilled, or rain water, one ounce (all by measure). Mix, and put into small bottles, labelling it No. I. Solution No. II. Nitrate of silver, one drachm; distilled, or rain-water, two ounces. Dissolved and labelled No. II.

*Directions.*—The solution No. I. is first applied to the hair with a tooth brush, and the application continued for fifteen or twenty minutes. The solution No. II. is then brushed over, a comb being used to separate the hairs, and allow the liquid to come in contact with every part. Care must be taken that the liquid do not come in contact with the skin, as the solution No. II. produces a very permanent dark stain on all substances with which it comes in contact. If the shade is not sufficiently deep, the operation may be repeated. The hair should be cleaned from grease before using the dye. Cost: Hydrosulphuret of ammonia, 2s. 6d. per pound; solution of potash, 8d. per pound; nitrate of silver, 4s. 6d. per ounce; bottles, 10d. to 1s. 5d. per dozen.

To try the effect of hair dye upon hair of any colour, cut off a lock and apply the dye thoroughly as directed above. This will be a guarantee of success, or will at least guard against failure.

**272. BUG POISON.**—Proof spirit, one pint; camphor, two ounces; oil of turpentine, four ounces; corrosive sublimate, one, ounce. Mix. Cost: proof spirit, 1s. 10d. per pint; camphor, 2s. 8d. per pound; oil of turpentine, 8d. per pint; corrosive sublimate, 3s. 6d. per pound.

**273. TO MAKE A FAC-SIMILE OF A LEAF IN COPPER.**—This beautiful experiment can be performed by any person in possession of a common galvanic battery. The process is as follows:—Soften a piece of gutta percha over a candle, or before a fire; knead it with the moist fingers upon a table, until the surface is perfectly smooth, and large enough to cover the leaf to be copied; lay the leaf flat upon the surface, and press every part well into the gutta percha. In about five minutes the leaf may be removed, when, if the operation has been carefully performed a perfect impression of the leaf will be made on the gutta percha. This must now be attached to the wire in connexion with the zinc end of the battery (which can easily be done by heating the end of the wire, and pressing it into the gutta percha), dusted well over with the best black lead, with a camel's-hair brush—the object of which is to render it a conductor of electricity—and then completely immersed in a saturated solution of sulphate of copper. A piece of copper attached to the wire in connexion with the copper end of the battery, must also be inserted into the copper solution, facing the gutta percha, but not touching it; this not only acts as a conductor to the electricity, but also maintains the solution of copper of a permanent strength. In a short time, the copper will be found to creep over the whole surface of the gutta percha, and in about twenty-four hours, a thick deposit of copper will be obtained, which may then be detached from the mould. The accuracy with which a leaf may thus be cast is truly surprising. I have in my possession a cast of a hazel-leaf made by the process, which

nobody would take to be a production of art; every fibre and nerve, in fact, the minutest part is delineated with the utmost fidelity.

**274. GOLD FISH.**—Great care must be taken of gold fish, as they are very susceptible; and hence a loud noise, strong smell, violent or even slight shaking of the vessel, will oftentimes destroy them. Small worms, which are common to the water, suffices for their food in general; but the Chinese, who bring gold fish to great perfection, throw small balls of paste into the water, of which they are very fond. They give them also lean pork, dried in the sun, and reduced to a very fine and delicate powder. Fresh river-water must be given them every day. Care must be taken to collect the spawn, when seen floating on the water, as otherwise it will be destroyed by the fish themselves. This spawn is put into a vessel, and exposed to the sun, until vivified by the heat. Gold fish, however, seldom deposit spawn when kept in vases. In order to procure a supply, they must be put into reservoirs of a considerable depth, in some parts at least, well shaded at intervals with water-lilies, and constantly supplied with fresh water. At a certain time of the year, numerous barques are seen in the great river of Yangtse-Keang, which go thither to purchase the spawn of gold fish. This is obtained with no small care, for towards the month of May, the inhabitants close the river in several places with mats and hurdles, which extend nine or ten leagues, and leave only a space in the middle sufficient for the passage of boats. The spawn is stopped by these hurdles, and the water being afterwards drawn up, and put into large vessels, is sold to merchants, who send it to all parts. Gold fish were introduced into England about the year 1691, but remained exceedingly scarce till 1728, when a great number were brought over, and presented to Sir Matthew Decker, by whom they were usually distributed round London.

## 275. METHOD OF HARDENING OBJECTS IN PLASTER OF PARIS.

—Take two parts of stearine, two parts of Venetian soap, one part of pearlsh, and twenty-four to thirty parts of a solution of caustic potash. The stearine and soap are cut into slices, mixed with the cold ley, and boiled for about half an hour, being constantly stirred. Whenever the mass rises, a little cold ley is added. The pearlsh, previously moistened with a little rainwater, is then added, and the whole boiled for a few minutes. The mass is then stirred until cold, when it is mixed with so much cold ley that it becomes perfectly liquid, and runs off the spoon without coagulating and contracting. Before using this composition, it should be kept for several days well covered. It may be preserved for years. Before applying it to the objects, they should be well dusted, the stains scraped away, and then coated, by means of a thick brush, with the wash, as long as the plaster of Paris absorbs it, and left to dry. The coating is then dusted with leather, or a soft brush. If the surface has not become shining, the operation must be repeated.

**276. CUP IN A PIE-DISH.**—The custom of placing an inverted cup in a fruit pie, the cook will inform us, is to contain the juice while the pie is baking in the oven, and prevent its boiling over; and she is the more convinced in her theory, because, when the pie is withdrawn from the oven, the cup will be found full of juice. When the cup is first put in the dish it is full of cold air, and, when the pie is placed in the oven, this air will expand by the heat and fill the cup, and drive out all the juice and a portion of the present air it contains, in which state it will remain until removed from the oven, when the air in the cup will condense, and occupy a very small space, leaving the remainder to be filled with juice; but this does not take place till the danger of the juice boiling over is passed. If a small glass tumbler is inverted in the pie, its contents can be examined into

while it is in the oven, and it will be found what has been advanced is correct.—*Gower's Scientific Phenomena of Domestic Life.*

**277. TO REMOVE INK-STAINS FROM SILVER.**—The tops and other portions of silver inkstands frequently become deeply discoloured with ink, which is difficult to remove by ordinary means. It may, however, be completely eradicated by making a little chloride of lime into a paste with water, and rubbing it upon the stains. Chloride of lime has been misnamed "The general bleacher," but it is a foul enemy to all metallic surfaces.

## 278. PARISIAN ETIQUETTE.

A little book has been published under this title,\* from which we compile the following rules of politeness and taste. In the work itself, they are given in a different form; and the subjects are somewhat amplified. Many of our readers may be visiting Paris, and to such persons the following hints will be useful:—

### INTRODUCTION TO SOCIETY.

Avoid all extravagance and inannerism, and be not over-timid at the outset.

Be discreet and sparing of your words.

Awkwardness is a great misfortune, but it is not an unpardonable fault.

To deserve the reputation of moving in good society, something more is requisite than the avoidance of blunt rudeness.

Strictly keep to your engagements.

Punctuality is the essence of royal politeness.

### THE TOILET.

Too much attention cannot be paid to the arrangements of the toilet.

A man is often judged by his appearance, and seldom incorrectly.

\* *Parisian Etiquette: a Guide to the Manners of French Society in Paris.* London: John F. Shaw, Southampton-row.

A neat exterior, equally free from extravagance and poverty, almost always proclaims a right-minded man.

To dress appropriately, and with good taste, is to respect yourself and others.

A black coat and trowsers are indispensable for a visit of ceremony, an entertainment, or a ball.

The white or black waistcoat is equally proper in these cases.

The hand should always be gloved.

A well-bred man always wears yellow kids in dancing. [So says our Parisian authority: we take exception, however, to the *yellow*—a tint is preferable to a decided colour!]

A person of distinction is always known by the fineness of his linen, and by the nicety of his hat, gloves, and boots. [Rather read: fine linen, and a good hat, gloves, and boots, are evidences of the highest taste in dress.]

A gentleman walking should always wear gloves, this being one of the characteristics of good breeding.

Upon public and state occasions officers should appear in uniform.

Ladies dresses should be chosen, so as to produce an agreeable harmony.

Never put on a dark-coloured bonnet with a light spring costume.

Avoid uniting colours which will suggest an epigram; such as a straw-coloured dress with a green bonnet.

The arrangement of the hair is most important.

Bands are becoming to faces of a Grecian caste.

Ringlets better suit lively and expressive heads.

Whatever be your style of face, avoid an excess of lace, and let flowers be few and choise.

In a married woman a richer style of ornament is admissible.

Costly elegance for her—for the young girl, a style of modest simplicity.

The most elegant dress loses its character if it is not worn with grace.

Young girls have often an air of constraint, and their dress seems to partake of their want of ease.

In speaking of her toilet, a woman

should not convey the idea that her whole skill consists in adjusting tastefully some trifling ornaments.

A simple style of dress is an indication of modesty.

#### CLEANLINESS.

The hands should receive special attention. They are the outward signs of general cleanliness. The same may be said of the face, the neck, the ears, and the teeth. (See 37, 38, 60, 144, 145 and 146.)

The cleanliness of the system generally, and of bodily apparel, pertains to Health, and will be treated of under this head.

#### THE HANDKERCHIEF.

There is considerable art in using this accessory of dress and comfort.

Avoid extreme patterns, styles, and colours.

Never be without a handkerchief.

Hold it freely in the hand, and do not roll it into a ball. Hold it by the centre, and let the corners form a fan-like expansion.

Avoid using it too much. With some persons the habit becomes troublesome and unpleasant.

#### VISITS AND PRESENTATIONS.

Friendly calls should be made in the forenoon, and require neatness, without costliness of dress.

Calls to give invitations to dinner-parties, or balls, should be very short, and should be paid in the afternoon.

Visits of condolence require a grave style of dress.

A formal visit should never be made before noon. If a second visitor is announced, it will be proper for you to retire, unless you are very intimate, both with the host and the visitor announced; unless, indeed, the host expresses a wish for you to remain.

Visits after balls or parties should be made within a month.

In the latter, it is customary to enclose your card in an envelope, bearing the address outside. This may be sent by post, if you reside at a distance.

But, in the neighbourhood, it is polite to send your servant, or to call. In the latter case a corner should be turned down.

Scrape your shoes, and use the mat. Never appear in a drawing-room with mud on your boots.

When a new visitor enters a drawing-room, if it be a gentleman, the ladies bow slightly; if a lady, the guests rise.

Hold your hat in your hand, unless requested to place it down. Then lay it beside you.

The last arrival in a drawing-room takes a seat left vacant near the mistress of the house.

A lady is not required to rise on receiving a gentleman, nor to accompany him to the door.

When your visitor retires, ring the bell for the servant. You may then accompany your guest as far towards the door as the circumstances of your friendship seem to demand.

Request the servant, during the visit of guests, to be ready to attend to the door the moment the bell rings.

When you introduce a person pronounce the name distinctly, and say whatever you can to make the introduction agreeable. Such as "an old and valued friend," a "school-fellow of mine," "an old acquaintance of our family."

Never stare about you in a room as if you were taking stock.

The gloves should not be removed during a visit.

Be hearty in your reception of guests. And where you see much diffidence, assist the stranger to throw it off.

A lady does not put her address on her visiting card. (See 474.)

279. H OR NO H?—How Mrs. HITCHING WAS CURED OF HER HABIT OF SPEAKING INCORRECTLY.—In the evening, after returning home, we were sitting by the fire, and felt comfortable and chatty, when I proposed to Mrs. Hitching the following Enigma, the

author\* of which had favoured me with a copy of it. —

The Wide World you may search, and my fellow  
not find;

I dwell in a Wacuum, deficient in Wind  
In the Winge I m seen—in the Woice I am  
heard,

And yet I m invisible, gives went to no Vurld.  
I m not much of a Vag, for I m vantage in  
Vn,

But distinguished in Werse for the Williams  
I've writ.

I m the head of all Willains yet far from the  
Vurt—

I m the foremost in Wice thie in Wirtue the  
first

I m not used to Vespone, and neer goes to  
Vn

Though in Walour inwincible—in Victory  
sure

The first of all Wiands and Wictuals is mine—  
Rich in Wenson and Weal but deficient in  
Vine.

To Wanity given I in Welwets abound,  
Ist in Voman in Wife and in Widow aint  
found

Yet, conspicuous in Virgins and I ll tell y  
between us,

To persons of taste I m a bit of a Venus  
Yet none take me for Vcal—or fr Vn in its  
stead,

I or I reeks not among the sweet Vood Vun  
and Ved!

Before the recital of the enigmas was  
half completed, Mrs Hitching laughed  
heartily—she saw, of course, the mean-  
ing of it—that it was a play upon the  
Cockney error of using the V instead of  
the W, and the latter instead of the V  
several times, as I proceeded, she ex-  
claimed "Hexcellent! hexcellent!" and  
when I had finished, she remarked that  
it was very "ingenious," and enough  
to "open the eyes" of the cockneys  
to their stupid and vulgar manner of  
speaking

A more difficult and delicate task lay  
before me. I told her that as she was  
so much pleased with the first enigmas,  
I would submit another by the same  
author. I felt very nervous, but deter-  
mined to proceed.

Byron, Mrs. first published in  
the English Review, 1840.

I dwell in the Herth and I br at' as in the  
Hair

If you searches the Hoocean, you ll find that  
I m there

The first of all Hangeels in Holympus am I  
Yet I m lashed from I ven expelled from

on Igh  
But though on ths Hurb I m destined to  
grovel

I m neer seen in an Ouse in an Ut r or r  
Ovel

Not an Oas nor an Untor eer bear me alis  
But often I m found on the top of a Hass

I resides in a Hattie and lovs not to roam  
And yet I m invariably absent from Om

Tho ushed in the Urrience of the Hismo  
sphere part

I enters no Ld I croops into no Art  
Only look and you ll see in the Hege I uppe

Only hark and you ll ear me just breath  
the Hear

Though in sex not an E I am (strange jara  
dov!)

Not a bit of an Effar but partly a Hov  
Of Hetrnity Hi m the beginning And

mark  
Though I goes not with Noas I m f t int c

Hul  
I m never in Ealth—I ve will I y re n

power  
I dies in a Month, but comes back in a Haur

I noticed during the progress of this  
enigma, in reciting which I ventured to

emphasise the misplaced h as much as  
possible, that occasional blushes and

smiles passed over Mrs Hitching's face  
After it was finished, there was a pause

of some minutes At last she said  
"Very good, very clever She car-

fully avoided using any word in which  
the h, hard or soft, -was required I

saw she was timid, and I then deter-  
mined to complete the task I had be-

gun, by repeating the following enigma  
by Byron, upon the same letter —

T was whispered in Heaven I was mul-  
tered in hell,

And echo caught faintly the sound as it fell  
On the confines of earth I was permitted to

rest,  
And the depths of the ocean its presence con-

templated  
T will be found in the sphere when tis given

astutely  
Is seen in the lightning, and heard in the

thunder

'T was allotted to man with his earliest breath,  
Attends at his birth, and awaits him in death;  
It presides o'er his happiness, honour, and  
health,  
Is the prop of his house, and the end of his  
wealth.  
Without it the soldier and seaman may roam,  
But woe to the wretch who expels it from  
home.  
In the whispers of conscience its voice will  
be found.  
Not e'en in the whirlwind of passion be  
drowned.  
I will not soften the heart, and the deaf to  
the ear,  
'T will make it acutely and instantly hear.  
But in shade let it rest, like a delicate flower—  
Oh, breathe on it softly—it dies in an hour.

She was much pleased, but seemed  
thoughtful, and once or twice in con-  
versation checked herself, and corrected  
her pronunciation of words that were  
difficult to her.

A few days afterwards, I called upon  
her, and upon being introduced to the  
poultice to wait for her appearance, I  
was lying upon her table the following

MEMORANDUM UPON THE USE OF

THE LETTER H.

Pronounce—	Herb,	'Erb
"	Heir,	'Eir
"	Honesty,	'Onesty.
"	Honour,	'Onour
"	Hospital,	'Ospital.
"	Hostler,	'Ostler.
"	Hour,	'Our.
"	Humour,	'Umour.
"	Humble,	'Umble
"	Humility,	'Umility.

In all other cases H is to be sounded when it  
begins a word

Mem.—Be careful to sound the H slightly in  
such words as where, when, what, why—don't  
say, were, wen, wat, wy.

I am happy to say that it is now a  
pleasure to hear Mrs. Hitching's con-  
versation. I only hope that others may  
improve as she has done.

280. FEMALE DRESS.—It is well  
known that a loose and easy dress con-  
tributes much to give the sex the fine  
proportions of body that are observable  
in the Grecian statues, and which serve  
as models to our present artists, nature

being too much disfigured among us  
to afford any such. The Greeks knew  
nothing of those Gothic shackles, that  
multiplicity of ligatures and bandages  
with which our bodies are compressed.  
Their women were ignorant of the use  
of whalebone stays, by which ours dis-  
tort their shape instead of displaying it.  
This practice, carried to so great an  
excess as it is in England, must in time  
degenerate the species, and is an in-  
stance of bad taste. Can it be a plea-  
sant sight to behold a woman cut in two  
in the middle, as it were like a wasp? On  
the contrary, it is as shocking to the  
eye as it is painful to the imagination.  
A fine shape, like the limb, hath its due  
size and proportion, a diminution of  
which is certainly a defect. Such a  
deformity also would be shocking in a  
naked figure; wherefore, then, should  
it be esteemed a beauty in one that is  
dressed? Everything that confines and  
lays nature under a restraint is an in-  
stance of bad taste. This is as true in  
regard to the ornaments of the body as  
to the embellishments of the mind.  
Life, health, reason, and convenience  
ought to be taken first into considera-  
tion. Gracefulness cannot subsist with-  
out ease; delicacy is not debility; nor  
must a woman be sick in order to  
please.—*Rousseau*.

281. GOING IN DEBT.—What com-  
parison is there between the guilt of the  
poor uneducated wretch, who ventures,  
in rags and misery, to steal from the  
apparent superfluities of his neighbour  
a portion for his starving family, and  
the crime of the well-fed, well-dressed,  
much-accomplished lady, who sails into  
the shop of the unwary tradesman for  
articles of useless luxury; and, under  
cover of the respectability of her ap-  
pearance and the address she gives—  
"defrauds him of property to a con-  
siderable amount!" The ragged cul-  
prit is watched and driven from the  
window—the fashionable thief is wel-  
comed in complacently and bowed out  
gratefully, with the promise that "her  
esteemed orders shall be attended to  
immediately." When the goods are

has *nominally* purchased are sent home, and they, like their real owner, are readily *taken in*, the grand piano is, perhaps, heard in her elegantly-furnished villa, or the carriage of some wealthier friend is standing at the door. The lady's place in church and in society is gaily filled, and, for a certain, or rather uncertain period, the custom and the company of "such a highly-respectable family" are considered an acquisition in the neighbourhood. But the change comes over the spirit of the dream: in course of time, the lady who *ordered with the greatest ease*, is discovered to *pay with the greatest difficulty*, and her commands are *not* so much *esteemed* as formerly. The dishonest beggar, if detected, is committed to prison; but, when things come to a crash with the fashionable thief, the lady's husband is simply declared "unfortunate;" and if forced to remove into a humbler dwelling, in a district in which she is not known, the lady is at liberty to pursue her former practices of shop-lifting, as far as circumstances will allow! It is certainly not too much to assert that *every one* of the articles which have been thus foolishly and fraudulently obtained, and the possession of which appeared so indispensable to the vanity or the consequence of those who longed for them, has, in its turn, helped to *lessen* their consideration, and to expose them to ridicule, if not contempt. What, in fact, has the costly timepiece, "the curtains like Mrs. Pimlico's," the "love of a looking glass, like that next door," which cost nearly a quarter's income—what have these and similar inconsistent belongings brought upon their unlucky owners? Literally, *nothing* but *consequence and ill-will*; and yet, for these, *ease and comfort* have been *bartered*, and the elegant lady will expose herself to tremble before the humblest tradesman in the street, lest he should deny her the commonest necessities of life!—*Home Truths for Home Peace.*

282. THE FEMALE TEMPER. — No trait of character is more agreeable

in a female than the possession of a sweet temper. Home can never be happy without it. It is like the flowers that spring up in our pathway, reviving and cheering us. Let a man go home at night, wearied and worn by the toils of the day, and how soothing is a word dictated by a good disposition! It is sunshine falling on his heart. He is happy, and the cares of life are forgotten. A sweet temper has a soothing influence over the minds of a whole family. Where it is found in the wife and mother, you observe a kindness and love predominating over the natural feelings of a bad heart. Smiles, kind words and looks, characterise the children, and peace and love have their dwelling there. Study, then, to acquire and attain a sweet temper.

283. HOW TO REMOVE STAINS FROM FLOORS.—For removing spots of grease from boards, take equal parts of fullers' earth and pearlash, a quarter of a pound of each, and boil in a quart of soft water; and, while hot, lay it on the greased parts, allowing it to remain on them for ten or twelve hours; after which it may be scoured off with sand and water. A floor much spotted with grease should be completely washed over with this mixture the day before it is scoured. Fullers' earth or ox-gall, boiled together, form a very powerful cleansing mixture for floors or carpets. Stains of ink are removed by strong vinegar, or salts of lemon will remove them.

284. WILLS.—If you wish to examine a will your best course is to go to "The Wills Office," in Doctors' Commons, St. Paul's Churchyard; have on a slip of paper the name of the testator—this, on entering, give to a clerk whom you will see at a desk on the right. At the same time pay a shilling, and you will then be entitled to search all the heavy Index volumes for the testator's name. The name found, the clerk will hand over the will for perusal, and there is no difficulty whatever, *provided you know about the year of the testator's death.* The Indexes are all

arranged and numbered according to their years. Not only the names of those who left wills are given, but also of those intestates to whose effects letters of administration have been granted. There is no charge beyond the shilling paid for entering. If you require a copy of the will, the clerk will calculate the expense, and you can have the copy in a few days. No questions whatever are asked—nor does the length of the will, or the time occupied in reading it, make any difference in the charge. Beyond the shilling paid on entering, there is no other demand whatever, unless for copying the whole, or a portion of the will. It may be as well to state, that there are many wills which are not lodged in Doctors' Commons. Some are proved in the courts of the several bishops—Gloucester, York, Chester, for instance; and there they remain. The wills of all who resided in London or the neighbourhood, or who were possessed of money in the funds, are proved in Doctors' Commons; the wills of the wealthier classes are mostly proved there. In the country, and with small properties, the executors usually resort to the bishop of the diocese. Most of the wills, for instance, of shopkeepers, &c., who resided in Manchester, are proved in Chester. The same rules are observed in the country as in London with regard to examination, &c. The fee—one shilling—is the same in all. Having ascertained that the deceased left a will, and that it has been proved, the next inquiry is, "*Where was it proved?*" The above explanation and remarks apply also to the administrations granted of the effects of those who died without wills.

**285. FOR SPRAINS AND BRUISES.**—Take one pint of train oil, half-a-pound of stone-pitch, half-a-pound of resin, half-a-pound of bees wax, and half-a-pound of stale tallow, or in like proportion. Boil them together for about half-an-hour, skim off the scum, and pour the liquid into cups, and when cold, it will be ready for use. When

needed, it must be spread *as thick, but not thicker*, than blister-salve, upon a piece of coarse flaxen cloth. Apply it to the part sprained or bruised, and let it remain for a day or more; it will give almost immediate relief, and one or two plaisters will be sufficient for a perfect cure.

**286. SAUCE FOR FISH.**—Twenty-four anchovies chopped; ten eschalots; two ounces of horse-radish, scraped; four blades of mace; one lemon, sliced; twelve cloves; quarter-of-an-ounce of black pepper, whole; one gill of the anchovy liquor; one quart of best vinegar; one quart of water. Let the whole simmer on the fire until reduced to one quart, in a covered saucepan, strain, and bottle for use. If required for long keeping, add a quarter-of-an-ounce of cayenne pepper.

**287. CANARIES.**—Especial care must be taken to keep the canary scrupulously clean. For this purpose, the cage should be strewed every morning with clean sand, or rather, fine gravel, for small pebbles are *absolutely essential* to life and health in cage-birds: fresh water must be given every day, both for drinking and bathing; the latter being in a shallow vessel; and, during the moulting season, a small bit of iron should be put into the water for drinking. The food of a canary should consist principally of *summer* rape-seed, that is, of those small *brown* rape-seeds which are obtained from plants sown in the spring, and which ripen during the summer; large and *black* rape-seeds, on the contrary, are produced by such plants as are sown in autumn, and reaped in spring. A little chickweed in spring, lettuce-leaves in summer, and endive in autumn, with slices of sweet apple in winter, may be safely given, but bread and sugar ought to be generally avoided. Occasionally also, a few poppy or canary-seeds, and a small quantity of bruised hemp-seed may be added, but the last very sparingly. Cleanliness, simple food, and fresh but not cold air, are essential to the well-being of a canary. During the winter, the

cage should never be hung in a room without a fire, but even then, when the air is mild, and the sun shines bright, the little prisoner will be refreshed by having the window open. The cage should never be less than eight inches in diameter, and a foot high, with perches at different heights.

### 288. MOTHER EVE'S PUDDING.

If you would have a good pudding, observe what you're taught:—

Take two pennyworth of eggs, when twelve for the great;

And of the same fruit that Eve had once chosen,

Well pared and well chopp'd, at least half-a-dozen;

Six ounces of bread, (let your maid eat the crust,)

The crumbs must be grated as small as the dust;

Six ounces of currants from the stones you ort,

Least they break out your teeth, and spoil all your sport;

Five ounces of sugar won't make it too sweet;  
Some salt and some nutmeg will make it complete,

Three hours let it boil, without hurry or fluster,

And then serve it up, without sugar or butter.

### 289. WASH FOR SUNDERN. —

Take two drachms of borax, one drachm of Roman alum, one drachm of camphor, half an ounce of sugar-candy, and a pound of ox-gall. Mix, and stir well for ten minutes or so, and repeat this stirring three or four times a-day for a fortnight, till it appears clear and transparent. Strain through blotting-paper, and bottle up for use.

### 290. STEWED MUSHROOMS. —

Cut off the ends of the stalks, and pare neatly some middle-sized or button-mushrooms, and put them into a basin of water with the juice of a lemon as they are done. When all are prepared, take them from the water with the hands to avoid the sediment, and put them into a stew-pan with a little fresh butter, white pepper, salt, and a little lemon-juice; cover the pan close, and let them stew gently for twenty minutes

or half an hour; then thicken the butter with a spoonful of flour, and add gradually sufficient cream, or cream and milk, to make the same about the thickness of good cream. Season the sauce to palate, adding a little pounded mace or grated nutmeg. Let the whole stew gently until the mushrooms are tender. Remove every particle of butter which may be floating on the top before serving.

### 291. QUESTIONS AND ANSWERS

ON FAMILIAR THINGS.—Why do candles and lamps "spirt," when rain is at hand?—Because the air is filled with vapour, and the humidity penetrates the wick; where (being formed into steam) it expands suddenly, and produces a little explosion.

292. Why does a drop of water sometimes roll along a piece of hot iron without leaving the least trace?—Because (when the iron is very hot indeed) the bottom of the drop is turned into vapour, which buoys the drop up, without allowing it to touch the iron.

293. Why does a laundress put a little saliva on a flat-iron, to know if it be hot enough?—Because, when the saliva sticks to the box, and is evaporated, she knows it is not sufficiently hot; but when it runs along the iron, it is.

294. Why is the flat-iron hotter, if the saliva runs along it, than if it adheres till it is evaporated?—Because, when the saliva runs along the iron, the heat is sufficient to convert the bottom of the drop into vapour; but if the saliva will not roll, the iron is not sufficiently hot to convert the bottom of the drop into vapour.

295. Why do wet feet or clothes give us "cold"?—Because the evaporation absorbs the heat so abundantly from the surface of our body, that its temperature is lowered below its natural standard; in consequence of which health is injured. [This also explains why it is dangerous to sleep in a damp bed.]

296. Why is the health injured when

the temperature of the body is reduced below its natural standard?—Because the balance of the circulation is destroyed: blood is driven away from the external surface by the chill, and thrown upon the internal organs, which are oppressed by this increased load of blood.

297. Why do not sailors get cold, who are frequently wet all day with sea-water?—Because the salt of the sea retards evaporation; and (as the heat of their bodies is drawn off gradually) the sensation of cold is prevented.—Also, the salt of the sea acts as a stimulus, and keeps the blood circulating in the skin.

298. What is the cause of snow?—When the air is nearly saturated with vapour, and condensed by a current of air below freezing-point, some of the vapour is condensed, and frozen into snow. A few years ago, some fishermen (who wintered at Nova-Zembla), after they had been shut up in a hut for several days, opened the window; and the cold external air rushing in, instantly condensed the air of the hut, and its vapour fell on the floor in a shower of snow.

299. What is the cause of sleet?—When flakes of snow (in their descent) pass through a bed of air above freezing-point, they partially melt, and fall to the earth as half-melted snow.

300. What is hail?—Rain which has passed in its descent through some cold bed of air, and has been frozen into drops of ice.

301. What is rain?—The vapour of the clouds or air condensed, and precipitated to the earth.

302. Why are rain-drops sometimes much larger than at other times?—When the rain-cloud is floating near the earth, the drops are large, because such a cloud is much more dense than one more elevated. The size of the rain-drop is also increased according to the rapidity with which the vapours are condensed.

303. Why does the Bible say that God "giveth snow like wool"?—Be-

cause snow (being a very bad conductor of heat) protects vegetables and seeds from the frost and cold.

304. How does the non-conducting power of snow protect vegetables from the frost and cold?—It prevents the heat of the earth from being drawn off by the cold air which rests upon it.

305. Why are woollens and furs used for clothing in cold weather?—Because they are very bad conductors of heat, and therefore prevent the warmth of the body from being drawn off by the cold air.

306. Do not woollens and furs actually impart heat to the body?—No; they merely prevent the heat of the body from escaping.

307. Where would the heat escape to, if the body were not wrapped in wool or fur?—The heat of the body would fly off into the air; for the cold air, coming in contact with our body, would gradually draw away its heat, till it was as cold as the air itself.

308. What then is the principal use of clothing in winter-time?—To prevent the animal heat from escaping too freely; and to protect the body from the external air (or wind), which would carry away its heat too rapidly.

309. Why are March winds dry?—Because they generally blow from the east or north-east, and therefore sweep over the continent of Europe.

310. What is the use of March winds?—They dry the soil (which is saturated by the floods of February), break up the heavy clods, and fit the land for the seeds which are committed to it.

311. Why is it said that "March comes in like a lion"?—Because it comes in with blustering east winds, so essential to dry the soil, which would otherwise rot the seed committed to it.

312. Why does "March go out like a lamb"?—Because the water, evaporated by the high winds, falls again in showers to fertilise the earth, and breaks the violence of the winds.

313. Why is it said that "A bushel of March dust is worth a king's ransom"?—Because it indicates that there

has been a continuance of dry weather; and unless March be dry, the seed will rot in wet soil.

314. Why is it said that "A dry cold March never begs bread?"—Because the dry cold winds of March prepare the soil for seeds, which germinate and produce fruit in the autumn.

315. Why is it said that "A wet March makes a sad autumn?"—Because, if March be wet, so much of the seed rots in the ground, that the autumn crops are spoiled.

316. Why is it said that "March flowers make no summer bowers?"—Because, if the spring be very mild, vegetation gets too forward, and is pinched by the nightly frosts, so as to produce neither fruits nor flowers.

317. Why is it said that "April showers bring May flowers?"—Because April showers supply the principal nourishment on which the seeds depend for their development.

318. Why is there more rain from September to March, than from March to September?—From September to March the temperature of the air is constantly decreasing; on which account, its capacity for holding vapour is on the decrease, and the vapour is precipitated as rain.—*Dr. Brewer's Guide to Science.*

319. OYSTER POWDER.—Open the oysters carefully, so as not to cut them, except in dividing the gristle which attaches the shells. Put them into a mortar, and when you have got as many as you can conveniently pound at once, add about two drachms of salt to about a dozen oysters; pound them, and rub them through the back of a hair sieve, and put them into a mortar again, with a pinch of sugar (previously thoroughly dried) and will roll them into a paste; roll this paste out several times, and finally, beat it, and roll it out the thickness of a half-penny, and cut it into small squares, lay them on a Dutch oven, where they will dry as evenly as you can get them; turn them every half hour, and when

they begin to dry crumble them. They will take about four hours to dry. Pound them, sift them, and put them into dry bottles; cork and seal them. Three dozen of natives require seven ounces and a half of flour to make them into a paste weighing eleven ounces, and when dried six and a-half ounces. To make half a pint of sauce, put one ounce of butter into a stewpan with three drachms of oyster powder, and six tablespoonfuls of milk; set it on a slow fire, stir it till it boils, and season it with salt. As a sauce, it is excellent for fish, fowls, or mutton steaks. Sprinkled on bread and butter, it makes a good sandwich.

320. CHARCOAL AS A DISINFECTANT.—The great efficacy of wood and animal charcoal in absorbing effluvia and the greater number of gases and vapours has long been known.

Charcoal powder has also, during many centuries, been advantageously employed as a filter for putrid water, the object in view being to deprive the water of numerous organic impurities diffused through it, which exert injurious effects on the animal economy.

It is somewhat remarkable that the very obvious application of a perfectly similar operation to the still rarer fluid in which we live—namely, the air, which not unfrequently contains even more noxious organic impurities floating in it than those present in water—should have, up till February last, been so unaccountably overlooked.

Charcoal not only absorbs effluvia and gaseous bodies; but, especially when in contact with atmospheric air, oxidizes and destroys many of the easily alterable ones, by resolving them into the simplest combinations they are capable of forming, which are chiefly water and carbonic acid.

It is on this oxidizing property of charcoal as well as on its absorbent power, that its efficacy as a deodorizing and disinfecting agent chiefly depends. Effluvia and miasmata are usually regarded as highly organised, nitro-

gases, as is alterable bodies. When these are absorbed by charcoal, they come in contact with highly condensed oxygen gas, which exists within the pores of all charcoal, which has been exposed to the air, even for a few minutes; in this way they are oxidized and destroyed. My attention has been especially directed for nearly a twelve months to the deodorizing and disinfecting properties of charcoal, and I have made an immense number of experiments on this subject.

On the 22nd of February last, I brought the subject before the Society of Arts, and on that occasion exhibited a specimen of a charcoal respirator and the mode of employing it. I likewise dwelt at some length on the utility of charcoal powder as a means of preventing the escape of noxious effluvia from churchyards, and from dead bodies on board ship and in other situations.

On the 9th of June last I also, in a letter to the Society of Arts, proposed to employ charcoal ventilators, consisting of a thin layer of charcoal enclosed between two thin sheets of wire gauze, to purify the foul air which is apt to accumulate in water-closets, in the close wards of hospitals, and in the impure atmospheres of many of the back courts and mews-lanes of large cities, all the impurities being absorbed and retained by the charcoal, while a current of pure air alone is admitted into the neighbouring apartments.

In this way pure air is obtained from exceedingly impure sources. Such an arrangement as this, carried out on a pretty large scale, would be especially useful to persons necessitated to live in pestiferous districts within the tropics, where the miasmata of ague, yellow fever, and similar diseases are prevalent.

The proper amount of air required by houses in such situations might be admitted through sheets of wire gauze or coarse canvas, containing a thin layer of coarse charcoal powder.

Under such circumstances, beds, pillows stuffed with powdered charcoal, and bed covers having the same

material quilted into them, could not fail to prove highly beneficial.

A tolerably thick charcoal ventilator, such as I have just described, could be very advantageously applied to the gully-holes of our common sewers, and to the sinks in private dwellings, the foul water in both cases being carried into the drains by means of tolerably wide syphon pipes, retaining always about a couple of inches of water.

Such an arrangement would effectually prevent the escape of any effluvia, would be easy of construction, and not likely to get soon out of order.

The charcoal respirators to which I have already referred, and to which I should wish to draw especial attention, are of three kinds.

The first form of the respirator is constructed for the mouth alone, and does not differ in appearance from an ordinary respirator, but is only half its weight, and about one-fifth of its price.

It is made to pass through a quarter of an inch of coarsely powdered charcoal, retained in its place by two sheets of silvered wire gauze covered over with thin woollen cloth, by which means the temperature is greatly increased. The charcoal respirator possesses several advantages over the respirators ordinarily in use.

1st Where the breath is at all fetid, which is usually the case in diseases of the chest, under many forms of dyspepsia, &c., the disagreeable effluvia are absorbed by the charcoal, so that comparatively pure air is alone inspired. This, I think, may occasionally exert a beneficial influence on diseases of the throat and lungs.

2ndly. The charcoal respirator for the mouth alone will certainly prove highly useful in poisonous atmospheres, where miasmata abound, if the simple precaution is only observed of inspiring the air by the mouth and expiring it by the nostrils.

The second form of respirator is constructed—that is, embracing both the mouth and the nose. It is only very slightly larger than the one already described.

method, and does not cover the nose as the ordinary animal respirator does, but merely touches the lower extremity, so which it is adapted, by means of a piece of flexible gauze covered with cotton-wool. When this respirator is worn, so air enters the lungs without first passing through the charcoal, and any effluvia or miasmata contained in the atmosphere are absorbed and oxidized by the charcoal. This form of the respirator, therefore, is peculiarly adapted for protecting the wearer against fever and other infectious diseases.

The third form of the respirator is also original, but is much larger, and therefore more cumbersome than the preceding variety. It is intended chiefly for use in chemical works, common sewers, &c., to protect the workmen from the noxious effects of the deleterious gases to which they are frequently exposed.

I think it but justice to myself to state that I have no pecuniary interest in any of these respirators. Though strongly urged to do so, I refused from among them by patent, on the ground that inventions for the prevention of death and disease ought to be sold at the lowest possible price, and should not, therefore, be encumbered with the expense and restrictions dependent upon patent rights. These respirators have been very successfully manufactured by Mr. W. B. Root, of 8, William-street, Kentish Town, who sells the one for the mouth alone at 6s.; the small or-nasal at 8s.; and the large or-nasal at 10s. each.

I am aware that some persons, who admit the deodorizing properties of charcoal deny that it acts as a disinfectant. I would direct the attention of such persons to the following statement of facts:—About a year ago the father of a full grown son, and two sons were placed in open pains, and covered by two inches of powdered charcoal. The sons having died during all that time in my laboratory, and though it is generally very warm, but the slightest

small has ever been verifiable, nor have any infectious diseases long experienced by any of the nine or ten persons by whom the laboratory is daily frequented.

Now, had the bodies of these animals been left to rotify under ordinary circumstances, not only would the stench emitted have been intolerable, but some of the persons would certainly have been struck down by fever or other malignant disorders. Within the last few months charcoal powder has been most successfully employed both at St. Mary's and St. Bartholomew's hospitals, to arrest the progress of gangrene and other putrid sores. The charcoal does not require to be put immediately in contact with the sores, but is placed above the dressings, not unfrequently quilted loosely in a little cotton wool. In many cases patients who were rapidly sinking have been restored to health.

In the instance of hospital gangrene, we have to deal not only with the effluvia, but also with real miasmata; for, as is well known, the poisonous gases emitted by gangrenous sores not only effect the individual with whom the mischief has originated, but readily infect the perfectly healthy wounds of any individual who may happen to be in its vicinity. So that in this way gangrene has been known to spread not only through one ward, but through several wards of the same hospital.

Within the last few weeks, the dissecting-rooms at St. Bartholomew's hospital have been perfectly deodorized by means of a few trays filled with a thin layer of freshly-bested wood charcoal. A similar arrangement will, in all probability, be likewise soon applied to the wards of St. Bartholomew's, and every other well-conducted hospital.

From these and other considerations, therefore, I feel perfectly confident that charcoal will prove by far the cheapest and best disinfectant.

Unlike many other disinfectants it evolves no disagreeable vapours, and if heated in closed vessels will always act,

however long it has been in use, quite as effectively as at first.

If our soldiers and sailors, therefore, when placed in unhealthy situations, were furnished with charcoal respirators, such as the second form above described, and if the floors of the tents and the lower decks of the ships were covered by a thin layer of freshly burnt wood charcoal, I think we could have little in future to apprehend from the ravages of cholera, yellow fever, and similar diseases by which our forces have of late been decimated. If found more convenient, the charcoal powder might be covered with coarse canvas, without its disinfectant properties being materially impaired.

The efficiency of the charcoal may be greatly increased, by making it red-hot before using it. This can easily be done by heating it in an iron saucepan covered with an iron lid.

When the charcoal is to be applied to inflammable substances, such as wooden floors, &c., of course it must be allowed to cool in close vessels before being used.—[We have deemed these remarks by Dr. John Stenhouse, F.R.S., lecturer on chemistry at St. Bartholomew's Hospital, to be of great importance; we have, therefore, printed them in extenso.] (See 357.)

**321. LEMON SPONGE.**—For a quart mould—dissolve two ounces of sugar in a pint and three quarters of water; strain it, and add three quarters of a pound of sifted loaf sugar, the juice of six lemons and the rind of one; boil the whole a few minutes, strain it again, and let it stand till quite cold and just beginning to stiffen; then beat the whites of two eggs, and put them to it, and whisk till it is quite white; put it into a mould, which must be first wetted with cold water, or salad oil is a much better substitute for turning out jelly, blancmange, &c., great care being taken not to pour it into the mould till quite cool, or the oil will float on the top, and after it is turned out it must be carefully wiped

over with a clean cloth. This recipe only requires to be tested, and will be invariably adopted.

**322. TO KILL SLUGS.**—Take a quantity of cabbage-leaves, and either put these into a warm oven, or heat them before the fire till they get quite soft; then rub them with unsalted butter, or any kind of fresh dripping, and lay them in places infested with slugs. In a few hours the leaves will be found covered with snails and slugs, which may then, of course, be destroyed in any way the gardener may think fit.

**323. HOW TO WASH KID GLOVES.**—Have ready a little new milk in one saucer, and a piece of brown soap in another, and a clean cloth or towel folded three or four times. On the cloth, spread out the glove smooth and neat. Take a piece of flannel, dip it in the milk, then rub off a good quantity of soap to the wetted flannel, and commence to rub the glove downwards towards the fingers, holding it firmly with the left hand. Continue this process until the glove, if white, looks of a dingy yellow, though clean, if coloured, till it looks dark and spoiled. Lay it to dry; and old gloves will soon look nearly new. They will be soft, glossy, smooth, supple, and elastic.

**324. DYEING THE HAIR.**—It may be stated once for all that this practice is decidedly injurious. It may fail altogether in producing the desired result; it is never unattended by a certain amount of unpleasant circumstances, and frequently with evil results.

In the first place, the alteration of the abnormal colour, so far as the general aspect of the face is concerned, has an effect the very reverse of that which was intended. Every eccentric part of man tends to make the human machine one harmonious whole. The figure, the stature, the skin, the hair, the gait, &c.

Fair hair is associated with a sanguineous and lymphatic temperament, a fair and white skin, blue eyes, and a

soft and mild expression. Black hair, on the contrary, is generally associated with a bilious habit of body, a muscular and nervous temperament, a dark and yellowish skin, lively black eyes, and a bold, proud air. Red hair is associated with a peculiar constitution, although closely approaching to the fair type. In this variety the skin is transparent, fresh, and presents a peculiar limpidity, which belongs exclusively to the colour of hair mentioned.

To what absurd contrasts, then, are those persons not exposed, who, from idle vanity, attempt to break the bond of union which exists between the hair and the rest of the body? If, then, from the impression that red hair is a disfigurement, it is dyed black, what relation can exist between this new colour, and the soft blue eye, and a skin so fine and so susceptible, that the sun's rays seem to penetrate it, in the form of those lentiginous spots commonly called freckles?

These objections do not apply with equal force to those cases where the object is merely to disguise partial discolouration of the hair; but, at the same time, it is not always easy to produce the exact shade of the original colour, and when the hair begins to grow this partial discolouration reappears and discloses the dye.

Finally, when this discolouration is widely diffused over the head, and requires an extensive application of the dye, in the case of an old man for example, the hair will then present a lustre, brilliancy, and that, in melancholy contradistinction with the faded and wrinkled skin, dull leaden eye, furrowed cheek, and broken and tottering gait.

Besides, experience has sufficiently established the fact, that the ingredients of which the dyes are composed, are far from being free from danger or inconvenience. The texture of the hair itself is deteriorated by them.

Compounded, as they are generally, of very active remedies, they burn the

hair, alter the piliferous capsule, arrest the natural secretion of the hair, and favour the production of baldness. They also frequently produce inflammation of the scalp. I have met with many cases in which females, who had been in the habit of using those dyes, were reduced to the sad alternative of maintaining a disagreeable and painful eruption, the result of the ingredients employed, or to abandon the disguise they were intended to produce.

Since we cannot hope to prohibit altogether the use of compositions for dyeing the hair, it only remains to point out those that are the least injurious, and most likely to answer the purpose sought for.

From the earliest time the following substances have been employed to blacken the hair:—The oil of cade, gall nuts, the lie of vine branches, preparations of lead; ravens' eggs have been extolled, probably because the colour of that bird is the most perfect black; putrified swallows, colocynth, &c. However, experience has shown that a certain number of preparations possess more or less efficacy, the principal of which I shall here point out.

Preparations of silver are used in various forms; as, for example, a pomade composed of nitrate of silver, cream of tartar, ammoniac, and prepared lard.

This pomade is to be applied to the hair by the aid of the brush and comb. They are also used in the form of paste:—Nitrate of silver, proto-nitrate of mercury, and distilled water. Dissolve—strain, and wash the residue with sufficient water to make a paste.

A clear paste is made of this solution and a sufficient quantity of starch, which is then carefully applied to the hair in the evening. The head is covered with a cap of gummed taffeta during the night, and the following morning the paste is washed off, and the hair anointed with any simple ointment.—*Dr. T. H. Burgess on the Diseases of the Hair.* (See 270, 271.)

## 325. COOKING COLD BUTCHERS MEAT.

**326. BEEF MASHED.**—Cut into small dice remains of cold beef; and gravy reserved from it on the first day of its being served should be put in the stew-pan with the addition of warm water, some mace, sliced eschalot, salt, and black pepper. Let the whole simmer gently for an hour. A few minutes before it is served, take out the meat and dish it; add to the gravy some walnut catsup, and a little lemon juice or walnut pickle. Boil up the gravy once more, and, when hot, pour it over the meat. Serve it with bread sippets.

**327. BEEF (WITH MASHED POTATOES).**—Mash some potatoes with hot milk, the yolk of an egg, some butter and salt. Slice the cold beef and lay it at the bottom of a pie dish, adding to it some sliced eschalot, pepper, salt, and a little beef gravy; cover the whole with a thick paste of potatoes, making the crust to rise in the centre above the edges of the dish. Score the potato crust with the point of a knife in squares of equal sizes. Put the dish before a fire in a Dutch oven, and brown it on all sides; by the time it is coloured, the meat and potatoes will be sufficiently done.

**328. BEEF BUBBLE AND SQUEAK.**—Cut into pieces, convenient for frying cold roast or boiled beef; pepper, salt, and fry them; when done, lay them on a hot drainer, and while the meat is draining from the fat used in frying them, have in readiness a cabbage already boiled in two waters; chop it small, and put it in the frying-pan with some butter, add a little pepper and keep stirring it, that all of it may be equally done. When taken from the fire, sprinkle over the cabbage a very little vinegar, only enough to give it a slight acid taste. Place the cabbage in the centre of the dish, and arrange the slices of meat neatly around it.

**329. BEEF OR MUTTON LUNCONS.**—Mince, not too finely, some cold roast beef or mutton. Chop the bones, and put them in a saucepan with six potatoes

peeled and sliced, one onion, also sliced some pepper and salt; of these make a gravy. When the potatoes are completely incorporated with the gravy, take out the bones, and put in the meat; stew the whole together for an hour before it is to be served.

**330. BEEF RISOLLS.**—Mince and season cold beef, and flavour it with mushrooms or walnut catsup. Make of beef dripping a very thin paste, roll it out in thin pieces, about four inches square; enclose in each piece some of the mince, in the same way as for puffs, cutting each neatly all round; fry them in dripping of a very light brown. The paste can scarcely be rolled out too thin.

**331. VEAL MINCED.**—Cut veal from the fillet or shoulder into very small dice; put into veal or mutton broth with a little mace, white pepper, salt, some lemon-peel grated, and a table-spoonful of mushroom catsup or mushroom powder, rubbed smooth into the gravy. Take out some of the gravy when nearly done, and when cool enough thicken it with flour, cream, and a little butter; boil it up with the rest of the gravy, and pour it over the meat when done. Garnish with bread sippets. A little lemon-juice added to the gravy improves its flavour.

**332. VEAL DRESSED WITH WHITE SAUCE.**—Boil milk or cream with a thickening of flour and butter; put into it thin slices of cold veal, and simmer it in the gravy till it is made hot without boiling. When nearly done, beat up the yolk of an egg, with a little anchovy and white sauce; pour it gently to the rest, stirring it all the time; simmer again the whole together, and serve it with sippets of bread and curled bacon alternately.

**333. VEAL RISOLLS.**—Mince and pound veal extremely fine; grate into it some remains of cooked ham. Mix these well together with white sauce, flavoured with mushrooms; form this mixture into balls, and enclose each in pastry. Fry them in butter of a nice brown. The same mince may be fried

in balls without pastry, being first cemented together with egg and bread-crumbs.

**334. MUTTON HASHED.**—Cut cold mutton into thin slices, fat and lean together; make gravy with the bones whence the meat has been taken, boiling them long enough in water, with onion, pepper, and salt; strain the gravy and water, but not boil, the mutton in it. Then take out some of the gravy to thicken it with flour and butter, and flavour it with mushroom catsup. Pour in the thickening and boil it up, having before taken out the meat, and placed it neatly on the dish in which it is to go to the table. Pour over it the boiling gravy, and add nibbets of bread.

**335. LAMBS.**—Fry slices or chops of lamb in butter till they are slightly browned. Serve them on a purée of cucumbers, or on a dish of spinach; or dip the slices in bread-crumbs, chopped parsley, and yolk of an egg; some grated lemon and a little nutmeg may be added. Fry them, and pour a little new gravy over them when served.

**336. PORK.**—Slices of cold pork, fried and laid on apple sauce, form an excellent side or corner dish. Boiled pork may also be made into rissoles, minced very fine like sausage meat, and seasoned sufficiently, but not over much.

**337. TO CLEAN WHITE SATIN AND FLOWERED SILKS.**—1. Mix sifted stale bread crumbs with powder blue, and rub it thoroughly all over, then shake it well, and dust it with clean soft cloths. Afterwards, where there are any gold or silver flowers, take a piece of crimson Ingrain velvet, rub the flowers with it, which will restore them to their original lustre.—2. Pass them through a solution of fine hard soap, at a hand heat, drawing them through the hand. Rinse in lukewarm water, dry and finish by pinning out. Brush the heavy or bright side with a clean dry brush, the way of the nap. Finish off by dipping a sponge into a clean tepid soapy lather in water, and rub the wrong side. Rinse out a

second time, and brush, and dry near a fire or in a warm room. Silk may be treated in the same way, but not brushed. (See 42.)

**338. POTTED BEEF.**—Take three or four pounds, or any smaller quantity, of lean beef, free from sinews, and rub them well with a mixture made of a handful of salt, one ounce of saltpetre, and one ounce of coarse sugar; let the meat lie in the salt for two days, turning and rubbing it twice a day. Put it into a stone jar with a little beef gravy, and cover it with a paste to keep it close. Bake it for several hours in a very slow oven, till the meat is tender; then pour off the gravy, which should be in a very small quantity, or the juice of the meat will be lost, pound the meat, when cold, in a marble mortar till it is reduced to a smooth paste, adding by degrees a little fresh butter melted. Season it as you proceed with pepper, allspice, nutmeg, pounded in ice, and cloves, or such of these spices as are thought agreeable. Some flavour with anchovy, ham, shallots, mustard, wine, flavoured vinegar, ragout powder, curry powder, &c., according to taste. When it is thoroughly beaten and mingled together, press it closely into small shallow pots, nearly full, and fill them up with a layer a quarter of an inch thick of clarified butter, and tie them up with a bladder, or sheet of India rubber. They should be kept in a cool place.

**339. CAKE OF MIXED FRUITS.**—Extract the juice from red currants by simmering them very gently for a few minutes over a slow fire; strain it through a folded muslin, and to one pound of it add a pound and a half of muscades or of freshly gathered apples, pared, and rather deeply cored, that the fibrous part may be avoided. Boil these quite slowly until the mixture is perfectly smooth; then, to evaporate part of the moisture, let the boiling be quickened. In from twenty-five to thirty minutes, draw the pan from the fire, and throw in gradually a pound and a quarter of sugar in five

powder; mix it well with the fruit, and when it is dissolved, continue the boiling rapidly for twenty minutes longer, keeping the mixture constantly stirred; put it into a mould and store it, when cold, for winter use, or serve it for dessert, or for the second course; in the latter case, decorate it with spikes of almonds blanched, and heap solid whipped cream round it, or pour it outward into the dish. For dessert, it may be garnished with dice of the sweet apple-jelly.—Juice of red currants, one pound; apples (pared and cored), one pound and a half—twenty-five to thirty minutes. Sugar one pound and a half—twenty minutes.

### 340 THE FAMILY CIRCLE.—

Under this title, a series of friendly parties have been instituted by a group of acquaintances in London. The following form of invitation and the rules of the Family Circle will be found interesting, probably useful —

Will you do me the favour of meeting here, as a guest on ——— next, at seven precisely, a few friends who have kindly joined in an attempt to commence occasional, pleasant, and social parties, at which the spirit and instant will be better understood by the perusal of the few annexed remarks and rules from

Yours sincerely,

They manage it better in France, is a remark to be often applied with reference to social life in England, and the writer fancies that the prevalence here of a few bad customs, easily changed, causes the disadvantageous difference between ourselves and our more courteous and agreeable neighbours.

1st. Worldly appearance; the phænomenon leading many to suppose that wealth is the standard of worth—in the minds of friends, a notion equally degrading to both parties.

2nd. Overdress, causing unnecessary expense and waste of time.

3rd. Expensive entertainments, as regards refreshments.

4th. Late hours.

The following brief rules are suggested, in a hope to show the way to a more, constant easy, and friendly in-

tercourse amongst friends, the writer feeling convinced that society is equally beneficial and requisite—in fact, that mankind in seclusion, like the sword in the scabbard, often loses polish, and gradually rusts.

**Rule 1.** That meetings be held in rotation, at each member's house, for the enjoyment of conversation; music, games and gay; dancing, gay only, and card-playing at limited sittings.

**Rule 2.** That such meetings commence at seven and end about or after twelve, and that members and guests be requested to remember that punctuality has been called the politeness of kings.

**Rule 3.** That as gentlemen are allowed for the whole season to appear, like the raven, in civil suits, ladies are to have the like privilege, and that no lady be allowed to quiz or notice the habits of another lady; and that demi-toilette in dress be considered the better taste in the family circle—not that the writer wishes to raise or lower the proper standard of ladies' dress, which ought to be neither too high nor too low, but at a happy medium.

**Rule 4.** That any lady infringing the last rule be liable to reproof by the oldest lady present at the meeting. If the oldest lady, like the oldest inhabitant, can be discovered.

**Rule 5.** That every member or guest be requested to bring with them their own vocal, instrumental, or dance music, and take it away with them, if possible, to avoid loss and confusion.

**Rule 6.** That no member or guest able to sing, play, or dance, refuse, unless excused by medical certificate, and that no cold or sore throat be allowed to last more than a week.

**Rule 7.** That as every member or guest known to be able to sing, play, or dance, is bound to do so if requested, the performer (especially if timid) is to be kindly criticised and encouraged, it being a fact well known that the greatest masters of an art are always the most lenient critics, from their deep knowledge of the feeling, intelligence, and perseverance required to at all approach perfection.

**Rule 8.** That gentlemen present do pay every attention to ladies, especially visitors, but such attention is to be general, and not particular—for instance, no gentleman is to dance more than three times with one lady during the evening, except in the case of lovers, privileged to do odd things during their temporary lunacy, and also married couples,

who are expected to dance together at least once during the evening, and stranger if they please.

**RULE 9.** That, to avoid unnecessary expense, the refreshments be limited to cold meat, sandwiches, bread, cheese, butter, vegetables, fruits, tea, coffee, negus, punch, malt liquors, &c. &c.

**RULE 10.** That all personal or face-to-face laudatory speeches (commonly called toasts, or, as may be, roasts) be for the future forbidden, without permission or enquiry, for reasons following:—That as the family circle includes bachelors and spinsters, and he, she, or they may be secretly engaged, it will be therefore cruel to excite hopes that may be disappointed, and that as some well-informed Benedict of long experience may after supper advise the bachelor to find the way to woman's heart—*rice versa*, some deep-feeling wife or widow, by "pity moved," may perhaps after supper advise the spinster the other way, which in public is an impropriety manifestly to be avoided.

**RULE 11** (*suggested by a lady*). That any lady, after supper, may (if she please) ask any gentleman apparently diffident, or requiring encouragement, to dance with her, and that no gentleman can of course refuse so kind a request.

**RULE 12.** That no gentleman be expected to escort any lady home on foot beyond a distance of three miles, unless the gentleman be positive and the lady agreeable.

**RULE THE LAST.** That as the foregoing remarks and rules are intended, in perfect good faith and spirit, to be considered general and not personal, no umbrage is to be taken, and the reader is to bear in mind the common and homely saying—

"Always at trifles scorn to take offence,

It shows great pride and very little sense."

**P.S.**—To save trouble to both parties, this invitation be deemed accepted, without the necessity to reply, unless refused within twenty-four hours.

**341. RICE BREAD.**—Take one pound and a half of rice, and boil it gently over a slow fire in three quarts of water about five hours, stirring it, and afterwards beating it up into a smooth paste. Mix this while warm into two gallons, or four pounds of flour, adding at the same time the usual quantity of yeast. Allow the dough to work a short time near the fire, after

which divide it into loaves, and it will be found, when baked, to produce twenty-eight or thirty pounds of excellent white bread.

### 342. MISCHIEF-MAKERS.

Oh! could there in this world be found  
Some little spot of happy ground,  
Where village pleasures might go round  
Without the village tattling!  
How doubly blest that place would be,  
Where all might dwell in liberty,  
Free from the bitter misery  
Of gossip's endless prattling.

If such a spot were really known,  
Dame Peace might claim it as her own:  
And in it she might fix her throne,  
For ever and for ever:  
There, like a queen, might reign and live,  
While every one would soon forgive  
The little slights they might receive,  
And he offended never.

'Tis mischief-makers that remove  
Far from our hearts the warmth of love,  
And lead us all to disapprove  
What gives another pleasure,  
They seem to take one's part—but when  
They've heard our cares, unkindly then  
They soon retell them all again,  
Mix'd with their poisonous measure.

And then they're such a cunning way,  
Of telling ill-meant tales they say,  
"Don't mention what I've said, I pray,  
I would not tell another;"  
Straight to your neighbour's house they go  
Narrating everything they know;  
And break the peace of high and low,  
Wife, husband, friend, and brother.

Oh! that the mischief-making crew  
Were all reduced to one or two,  
And they were painted red or blue,  
That every one might know them  
Then would our villages forget  
To rage and quarrel, fume and fret,  
And fall into an angry pet,  
With things so much below them

For 'tis a sad, degrading part  
To make another's bosom smart,  
And plant a dagger in the heart  
We ought to love and cherish  
Then let us evermore be found  
In quietness with all around,  
While friendship, joy, and peace abound  
And angry feelings perish.

## 343. GLORIOUS INTELLIGENCE!

ANOTHER DREADFUL SORTIE  
REPULSED!

## LORD DUNDONALD OUTDONE!

THE above were the exclamations with which a gentleman rushed into the office of "ENQUIRE WITHIN" a few days ago. "What's the matter?" we asked; "any news from the Crimea?" "The Crimea! No. But you just put this piece of information in your work, and thousands will thank you for it. We have been for a long time troubled with bugs, and never could get rid of them by any clean, inoffensive, and expeditious method, until a friend of ours told us to suspend a small bag of camphor to the bed, just in the centre, overhead. We did so, and the enemy was most effectually repulsed, and has not made his appearance since—not even for a reconnaissance!" We therefore give the information upon this method of getting rid of bugs, our informant being most confident of its success in every case.

**344. TO WASH A WHITE LACE VEIL.**—Put the veil into a strong lather of white soap and very clear water, and let it simmer slowly for a quarter of an hour. Take it out and squeeze it well, but be sure not to rub it. Rinse it in two cold waters, with a drop or two of liquid blue in the last. Have ready some very clear weak gum arabic water, or some thin starch, or rice-water. Pass the veil through it, and clear it by clapping. Then stretch it out even, and pin it to dry on a linen cloth, making the edge as straight as possible, opening out all the scallops, and fastening each with pins. When dry, lay a piece of thin muslin smoothly over it, and iron it on the wrong side.

**345. HONEY SOAP.**—Cut thin two pounds of yellow soap into a double saucepan, occasionally stirring it till it is melted, which will be in a few minutes if the water is kept boiling around it; then add a quarter of a pound of

palm oil, quarter of a pound of honey, three pennyworth of true oil of cinnamon; let all boil together another six or eight minutes; pour out and stand it by till next day, it is then fit for immediate use. If made as these directions it will be found to be a very superior soap.

**346. TO DISTINGUISH MUSH-  
ROOMS FROM POISONOUS FUNGI.**

—1. Sprinkle a little salt on the spongy part or gills of the sample to be tried. If they turn yellow, they are poisonous, —if black, they are wholesome. Allow the salt to act before you decide on the question. 2. False mushrooms have a warty cap, or else fragments of membrane, adhering to the upper surface, are heavy, and emerge from a vulva or bag; they grow in tufts or clusters in woods, on the stumps of trees, &c., whereas the true mushrooms grow in pastures. 3. False mushrooms have an astringent, styptic, and disagreeable taste. 4. When cut they turn blue. 5. They are moist on the surface and generally. 6. Of a rose or orange color. 7. The gills of the true mushroom are of a pinky red, changing to a liver colour. 8. The flesh is white. 9. The stem is white, solid, and cylindrical.

**347. LAVENDER SCENT BAG.**—Take of lavender flowers free from stalk half a pound; dried thyme and mint of each half an ounce; ground cloves and caraways of each, a quarter of an ounce; common salt, dried, one ounce; mix the whole well together, and put the product into silk or cambric bags. In this way it will perfume the drawers and linen very nicely.

**348. WARMING COLD SWEET  
DISHERS.**

**349. RICE PUDDING.**—Over the cold rice pudding pour a custard; and add a few lumps of jelly or preserved fruit. Remember to remove the baked coating of the pudding before the custard is poured over it.

**350. APPLE TART.**—Cut into triangular pieces the remains of a cold apple tart; arrange the pieces around the sides of a glass or china bowl, and leave

space in the centre for a custard to be poured in.

**351. PLUM PUDDING.**—Cut into thin round slices cold plum pudding and fry them in butter. Fry also Spanish fritters, and place them high in the centre of the dish, and the fried pudding all round the heaped-up fritters. Powder all with lump sugar, and serve them with wine sauce in a tureen.

**352. APPLES IN SYRUP FOR IMMEDIATE USE.**—Pare and core some hard round apples, and throw them into a basin of water; as they are done, clarify as much loaf sugar as will cover them; put the apples in along with the juice and rind of a lemon, and let them simmer till they are quite clear; great care must be taken not to break them. Place them on the dish they are to appear upon at table, and pour the syrup over.

**353. TO PRESERVE CUCUMBERS.**—Take large and fresh-gathered cucumbers,—split them down and take out all the seeds, lay them in salt and water that will bear an egg three days: set them on a fire with cold water, and a small lump of alum, and boil them a few minutes, or till tender;—drain them, and pour on them a thin syrup:—let them lie two days, boil the syrup again, and put it over the cucumbers, repeat it twice more, then have ready some fresh clarified sugar, boiled to a blow (which may be known by dipping the skimmer into the sugar, and blowing strongly through the holes of it; if little bladders appear, it has attained that degree); put in the cucumbers, and simmer it five minutes:—set it by till next day;—boil the syrup and cucumbers again, and set them in glasses for use.

**354. BAKED PEARS.**—Take twelve pears, baking pears,—pare and cut them in halves, leaving on the stem about half an inch long; take out the core with the point of a knife, and place them close together in a block-tin saucepan, the inside of which is quite bright, with the cover to fit quite close,—put

to them the rind of a lemon cut thin, with half its juice; a small stick of cinnamon, and twenty grains of aleppo; cover them with spring-water, and allow one pound of loaf-sugar to a pint and a half of water:—cover them up close, and bake them for six hours in a very slow oven:—they will be quite tender, and of a bright colour. Prepared cochineal is generally used for colouring the pears; but if the above is strictly attended to, it will be found to answer best.

**355. SORE THROAT.**—I have been subject to sore throat, and have invariably found the following preparation (simple and cheap) highly efficacious when used in the early stage: Pour a pint of boiling-water upon twenty-five or thirty leaves of common sage; let the infusion stand for half an hour. Add vinegar sufficient to make it moderately acid, and honey according to the taste. This combination of the astringent and the emollient principle seldom fails to produce the desired effect. The infusion must be used as a gargle several times a day. It has this advantage over many gargles—it is pleasant to the taste, and may be swallowed occasionally, not only without danger, but with advantage.

**356. BELVIDERE CAKES, FOR BREAKFAST OR TEA.**—Take a quart of flour, four eggs, a piece of butter the size of an egg, a piece of lard the same size; mix the butter and lard well in the flour; beat the eggs light in a pint bowl, and fill it up with cold milk; then pour it gradually into the flour; add a teaspoonful of salt; work it for eight or ten minutes only; cut the dough with a knife the size you wish it; roll them into cakes about the size of a breakfast plate, and bake in a quick oven.

**357. CHARCOAL.**—All sorts of glass vessels and other utensils may be purified from long-retained smells of every kind, in the easiest and most perfect manner, by rinsing them out well with charcoal powder, after the grosser impurities have been removed

off with sand and potash. Rubbing the teeth, and washing out the mouth with fine charcoal powder, will render the teeth beautifully white, and the breath perfectly sweet, where an offensive breath has been owing to a scorbutic disposition of the gums. Putrid water is immediately deprived of its bad smell by charcoal. When meat, fish, &c., from intense heat, or long keeping, are likely to pass into a state of corruption, a simple and pure mode of keeping them sound and healthful is, by putting a few pieces of charcoal, each the size of an egg, into the pot or saucepan wherein the fish or flesh is to be boiled. Among others, an experiment of this kind was tried upon a turbot, which appeared to be too far gone to be eatable; the cook, as advised, put three or four pieces of charcoal, each the size of an egg, under the strainer, in the fish kettle: after boiling the proper time, the turbot came to the table sweet and firm. (See 320.)

358. STAINING.—GENERAL OBSERVATIONS.—When *alabaster*, *marble*, and other *stones*, are coloured, and the stain is required to be deep, it should be poured on boiling-hot, and brushed equally over every part if made with water; if with spirit, it should be applied cold, otherwise the evaporation, being too rapid, would leave the colouring matter on the surface, without any, or very little, being able to penetrate. In greyish or brownish stones, the stain will be wanting in brightness, because the natural colour combines with the stain; therefore, if the stone be a pure colour, the result will be a combination of the colour and stain. In staining *bone* or *ivory*, the colours will take better before than after polishing; and if any dark spots appear, they should be rubbed with chalk, and the article dyed again to produce uniformity of shade. On removal from the boiling-hot-dye-bath, the bone should be immediately plunged into cold water, to prevent cracks from the heat. If *paper* or *parchment* is stained, a broad-varnish brush should be employed to lay the

colouring on evenly. When the stains for wood are required to be very strong, it is better to soak and not brush them; therefore, if for inlaying or fine work, the wood should be previously split or sawn into proper thicknesses; and when directed to be brushed several times over with the stains, it should be allowed to dry between each coating. When it is wished to render any of the stains more durable and beautiful, the work should be well rubbed with Dutch or common rushes, after it is coloured, and then varnished with seed-lac varnish, or if a better appearance is desired, with three coats of the same or shellac varnish. Common work only requires frequent rubbing with linseed oil and woollen rag. The remainder, with the exception of *glass*, will be treated of in this paper.

359. ALABASTER, MARBLE, and STONE, may be stained of a yellow, red, green, blue, purple, black, or any of the compound colours, by the stains used for wood.

360. BONE and IVORY. *Black*.—1. Lay the article for several hours in a strong solution of nitrate of silver, and expose to the light. 2. Boil the article for some time in a strained decoction of logwood, and then steep it in a solution of per-sulphate or acetate of iron. 3. Immerse frequently in ink, until of sufficient depth of colour.

361. *Blue*.—1. Immerse for some time in a dilute solution of sulphate of indigo—partly saturated with potash—and it will be fully stained. 2. Steep in a strong solution of sulphate of copper.

362. *Green*.—1. Dip blue-stained articles for a short time in nitro-hydrochlorate of tin, and then in a hot decoction of fustic. 2. Boil in a solution of verdigris in vinegar until the desired colour is obtained.

363. *Red*.—1. Dip the articles first in the tin mordant used in dyeing, and then plunge into a hot decoction of Brazil wood—half a pound to a gallon of water—or cochineal. 2. Steep in red ink until sufficiently stained.

364. *Scarlet*.—Use lac-dye instead of the preceding.

365. *Violet*.—Dip in the tin mordant, and then immerse in a decoction of logwood.

366. *Yellow*.—1. Impregnate with nitro-hydro-chlorate of tin, and then digest with heat in a strained decoction of fustic. 2. Steep for twenty-four hours in a strong solution of the neutral chromate of potash, and then plunge for some time in a boiling solution of acetate of lead. 3. Boil the articles in a solution of alum—a pound to half a gallon—and then immerse for half an hour in the following mixture:—Take half a pound of turmeric, and a quarter of a pound of pearl-ash; boil in a gallon of water. When taken from this, the bone must be again dipped in the alum solution.

367. Horn must be treated in the same manner as bone and ivory for the various colours given under that heading.

368. *In imitation of Tortoise-shell*.—First steam and then press the horn into proper shapes, and afterwards lay the following mixture on with a small brush, in imitation of the mottle of tortoise-shell:—Take equal parts of quick-lime and litharge, and mix with strong soap lees; let this remain until it is thoroughly dry, brush off, and repeat two or three times, if necessary. Such parts as are required to be of a reddish brown should be covered with a mixture of whitening and the stain.

369. *Iron. Black, for ships' guns, shot, &c.*—To one gallon of vinegar add a quarter of a pound of iron-rust, let it stand for a week; then add a pound of dry lamp-black, and three quarters of a pound of copperas; stir it up for a couple of days. Lay five or six coats on the gun, &c., with a sponge, allowing it to dry well between each. Polish with linseed oil and soft woollen rag; and it will look like ebony.

370. *PAPER AND PARQUET. Blue*.—1. Stain it green with the verdigris stain given below, and brush over with a solution of new-lash—two ounces to

the pint—till it becomes blue. 2. Use the blue stain for wood.

371. *Green and Red*.—The same as for wood.

372. *Orange*.—Brush over with a tincture of turmeric, formed by infusing an ounce of the root in a pint of spirit of wine; let this dry, and give another coat of pearl-ash solution, made by dissolving two ounces of the salt in a quart of water.

373. *Purple*.—1. Brush over with the expressed juice of ripe privet berries. 2. The same as for wood.

374. *Yellow*.—1. Brush over with tincture of turmeric. 2. Add annatto or dragon's-blood to the tincture of turmeric, and brush over as usual.

375. *Wood. Black*.—1. Drop a little sulphuric acid into a small quantity of water, brush over the wood and hold to the fire; it will be a fine black, and receive a good polish. 2. Take half a gallon of vinegar, an ounce of bruised nut-galls, of logwood chips and copperas each half a pound—boil well; add half an ounce of the tincture of sesquichloride of iron, formerly called the muriated tincture, and brush on hot. 3. Use the stain given for ships' guns. 4. Take half a gallon of vinegar, half a pound of dry lamp-black, and three pounds of iron-rust sifted. Mix, and let stand for a week. Lay three coats of this on hot, and then rub with linseed oil, and you will have a fine deep black. 5. Add to the above stain an ounce of nut-galls, half a pound of logwood chips, and a quarter of a pound of copperas; lay on three coats, oil well, and you will have a black stain that will stand any kind of weather, and one that is well suited for ships' cumbings, &c. 6. Take a pound of logwood chips, a quarter of a pound of Brazil wood, and boil for an hour and a half in a gallon of water. Brush the wood several times with this decoction while hot. Make a decoction of nut-galls by simmering gently for three or four days a quarter of a pound of the galls in two quarts of water; give the wood three coats of this, and while wet

lay on a solution of sulphate of iron (two ounces to a quart); and when dry oil or varnish. 7. Give three coats with a solution of copper filings in aquafortis, and repeatedly brush over with the logwood decoction, until the greenness of the copper is destroyed. 8. Boil half a pound of logwood chips in two quarts of water, add an ounce of pearl-ash, and apply hot with a brush. Then take two quarts of the logwood decoction, and half an ounce of verdigris, and the same of copperas; strain, and throw in half a pound of iron rust. Brush the work well with this, and oil.

376. *Blue*.—1. Dissolve copper filings in aquafortis, brush the wood with it, and then go over the work with a hot solution of pearl-ash (two ounces to a pint of water), till it assumes a perfectly blue colour. 2. Boil a pound of indigo, two pounds of woad, and three ounces of alum in a gallon of water; brush well over until thoroughly stained.

377. *In imitation of Botany-Bay Wood*.—Boil half a pound of French berries (the unripe berries of the *rhamnus infectiorius*), in two quarts of water till of a deep yellow, and while boiling hot give two or three coats to the work. If a deeper colour is desired, give a coat of logwood decoction over the yellow. When nearly dry, form the grain with No. 8 *black stain*, used hot, and when dry rust and varnish.

378. *Green*.—Dissolve verdigris in vinegar, and brush over with the hot solution until of a proper colour.

379. *Mahogany Colour*.—*Dark*. 1. Boil half a pound of madder and two ounces of logwood chips in a gallon of water, and brush well over while hot; when dry, go over the whole with pearl-ash solution, two drachms to the quart. 2. Put two ounces of dragon's-blood, bruised, into a quart of oil of turpentine; let the bottle stand in a warm place, shake frequently, and, when dissolved, steep the work in the mixture.

380. *Light Red Brown*.—Boil half a pound of madder and a quarter of a

pound of fustic in a gallon of water; brush over the work when boiling-hot, until properly stained. 2. The surface of the work being quite smooth, brush over with a weak solution of aquafortis, half an ounce to the pint, and then finish with the following:—Put four ounces and a half of dragon's-blood and an ounce of soda, both well bruised, to three pints of spirit of wine, let it stand in a warm place, shake frequently, strain, and lay on with a soft brush, repeating until of a proper colour; polish with linseed oil or varnish.

381. *Purple*.—Brush the work several times with the logwood decoction used for No. 6 *black*, and when dry give a coat of pearl-ash solution, one drachm to a quart, taking care to lay it on evenly.

382. *Red*.—1. Boil a pound of Brazil wood and an ounce of pearl-ash in a gallon of water, and while hot brush over the work until of a proper colour. Dissolve two ounces of alum in a quart of water, and brush the solution over the work before it dries. 2. Take a gallon of the above stain, add two more ounces of pearl-ash; use hot, and brush often with the alum solution. 3. Use a cold infusion of archil, and brush over with the pearl-ash solution used for No. 1 *dark mahogany*.

383. *In imitation of Rosewood*.—1. Boil half a pound of logwood in three pints of water till it is of a very dark red, add half an ounce of salt of tartar; stain the work with the liquor while boiling hot, giving three coats; then with a painter's graining brush, form streaks with No. 8 *black stain*; let dry, and varnish. 2. Brush over with the logwood decoction used for No. 6 *black*, three or four times; put half a pound of iron filings into two quarts of vinegar; then with a graining brush or cane, bruised at the end, apply the iron-filing solution in the form required, and polish with bees-wax and turpentine when dry, or varnish.

384. *Yellow*.—1. Brush over with the tincture of turmeric. 2. Warm the work, and brush over with weak aquafortis,

then hold to the fire. Varnish or oil as usual.

**385. CURE OF WARTS.**—Mr. Lawrence, surgeon, of St. Bartholomew's, says, the easiest way to get rid of warts is to pare off the thickened skin which covers the prominent wart; cut it off by successive layers; shave it till you come to the surface of the skin, and till you draw blood in two or three places. When you have thus denuded the surface of the skin, rub the part thoroughly over with *lunar caustic*, and one effective operation of this kind will generally destroy the wart; if not, you cut off the black spot which has been occasioned by the caustic, and apply it again; or you may apply *acetic acid*, and thus you will get rid of it.

**386. TO REMOVE FRECKLES.**—Dissolve, in half an ounce of lemon-juice, one ounce of Venice soap, and add a quarter of an ounce each of oil of bitter almonds, and deliquated oil of tartar. Place this mixture in the sun till it acquires the consistency of ointment. When in this state add three drops of the oil of rhodium, and keep it for use. Apply it to the face and hands in the manner following: Wash the parts at night with elder-flower water, then anoint with the ointment. In the morning cleanse the skin from its oily adhesion by washing it copiously in rose-water.

**387. DIRECTIONS FOR PUTTING ON GUTTA PERCHA SOLES.**—Dry the old sole, and rough it well with a rasp, after which, put on a thin coat of warm solution with the finger, rub it well in; let it dry, then hold it to the fire, and, whilst warm, put on a second coat of solution thicker than the first, let it dry. Then take the gutta-percha sole, and put it in hot water until it is soft; take it out, wipe it, and hold the sole in one hand and the shoe in the other to the fire, and they will become sticky; immediately lay the sole on, beginning at the toe, and proceed gradually. In half an hour, take a knife and pare it. The solution should be warmed by putting as much as you

want to use in a cup, and placing it in hot water, taking care that no water mixes with the solution.

**388. COD LIVER OIL.**—Cod-liver oil is neither more nor less than cod-oil clarified; and consequently two-thirds of its medicinal qualities are abstracted thereby. Cod-oil can be purchased pure at any wholesale oil warehouse, at about one-thirtieth part of the price charged for the so-called cod-liver oil. Many persons who have used cod-oil pure, as imported, have found it to answer much better than the cod-liver oil purchased of a druggist. The best vehicle for taking cod-liver oil in is new milk, and the disagreeable flavour of the drug can easily be covered by the addition of one drachm of orange-peel to every eight ounces of the oil.

**389. TO BOTTLE FRUITS.**—Burn a match in a bottle to exhaust all air, then place in the fruit to be preserved, quite dry, and without blemish; sprinkle sugar between each layer, put in the bung, and tie the bladder over, setting the bottles bung downwards, in a large stew-pan of cold water, with hay between to prevent breaking. When the skin is just cracking, take them out. All preserves require exclusion from the air; place a piece of paper dipped in sweet oil over the top of the fruit; prepare thin paper, immersed in gum-water, and, while wet, press it over and around the top of the jar; as it dries, it will become quite firm and tight.

**390. TO CLEAN CANE-BOTTOM CHAIRS.**—Turn up the chair bottom, &c., and with hot water and a sponge wash the cane-work well, so that it may become completely soaked. Should it be very dirty you must add soap. Let it dry in the open air, if possible, or in a place where there is a thorough draught, and it will become as tight and firm as when new, providing that it has not been broken.

**391. TEETHING.**—Young children whilst cutting their first set of teeth often suffer severe constitutional disturbance. At first there is restlessness and peevishness, with slight fever, but

not unfrequently these are followed by convulsive fits, as they are commonly called, which depend on the brain becoming irritated; and sometimes under this condition the child is either cut off suddenly, or the foundation of serious mischief to the brain is laid. The remedy, or rather the safeguard, against these frightful consequences is trifling, safe, and almost certain, and consists merely in lancing the gum covering the tooth which is making its way through. When teething is about it may be known by the spittle constantly drivelling from the mouth and wetting the frock. The child has its fingers often in its mouth, and bites hard any substance it can get hold of. If the gums be carefully looked at, the part where the tooth is pressing up is swollen and redder than usual; and if the finger be pressed on it the child shrinks and cries, showing that the gum is tender. When these symptoms occur, the gum should be lanced, and sometimes the tooth comes through the next day, if near the surface; but if not so far advanced the cut heals and a scar forms, which is thought by some objectionable, as rendering the passage of the tooth more difficult. This, however, is untrue, for the scar will give way much more easily than the uncut gum. If the tooth do not come through after two or three days, the lancing may be repeated; and this is more especially needed if the child be very fractious, and seem in much pain. Lancing the gums is further advantageous, because it empties the inflamed part of its blood, and so relieves the pain and inflammation. The relief children experience in the course of two or three hours from the operation is often very remarkable, as they almost immediately become lively and cheerful.

**392. TO MAKE BRITISH ANCHOVIES.**—To a peck of sprats put two pounds of salt, three ounces of bay salt, one pound of saltpetre, two ounces of prunella, and a few grains of cochineal; pound them all in a mortar, then put into a stone pan or anchovy-barrel, first

a layer of sprats, and then one of the compound, and so on alternately to the top. Press them down hard, cover them close for six months, and they will be fit for use, and will readily produce a most excellent flavoured sauce. A large trade is done in this article, especially for making anchovy paste or sauce, when a little more colouring is added.

**393. EYELASHES.**—The mode adopted by the beauties of the East to increase the length and strength of their eyelashes is simply to clip the split ends with a pair of scissors about once a month. Mothers perform the operation on their children, both male and female, when they are mere infants, watching the opportunity whilst they sleep; the practice never fails to produce the desired effect. We recommend it to the attention of our fair readers, as a safe and innocent means of enhancing the charms which so many of them, no doubt, already possess.

**394. APPLE MARMALADE.**—Peel and core two pounds sub-acid apples and put them in an enamelled saucepan with one pint of sweet cider, or half a pint of pure wine, and one pound of crushed sugar, and cook them by a gentle heat three hours, or longer, until the fruit is very soft, and then squeeze it first through a colander and then through a sieve. If not sufficiently sweet, add powdered sugar to suit your taste, and put away in jars made airtight by a piece of wet bladder. It is delicious when eaten with milk, and still better with cream.

**395. CHEAP FUEL.**—One bushel of small coal or sawdust, or both mixed together, two bushels of sand, one bushel and a half of clay. Let these be mixed together with common water, like ordinary mortar; the more they are stirred and mixed together the better; then make them into balls, or with a small mould make them in the shape of bricks, pile them in a dry place, and when they are hard and sufficiently dry, they may be used. A fire cannot be lighted with them, but

when the fire is quite lighted, put them on behind, with a coal or two in front, and they will be found to keep up a stronger fire than any fuel of the common kind.

**396. DOMESTIC YEAST.**—Ladies who are in the habit (and a most laudable and comfortable habit it is) of making domestic bread, cake, &c., are informed that they can easily manufacture their own yeast by attending to the following directions:—Boil one pound of good flour, a quarter of a pound of brown sugar, and a little salt, in two gallons of water, for one hour. When milk warm, bottle it, and cork it close. It will be fit for use in twenty-four hours. One pint of this yeast will make 18 lbs. of bread.

**397. COLD PARTRIDGE PIE.**—Bone partridges, the number according to the size the pie is wanted, make some good force, and fill the partridges with it; put a whole raw truffle in each partridge (let the truffle be peeled), raise the pie, lay a few slices of veal in the bottom, and a thick layer of force; then the partridges, and four truffles to each partridge; then cover the partridges and truffles over with sheets of bacon, cover the pie in and finish it. It will take four hours baking. Cut two pounds of lean ham (if eight partridges are in the pie) into very thin slices, put it in a stewpan along with the bones and giblets of the partridges, and any other loose giblets that are at hand, an old fowl, a faggot of thyme and parsley, a little mace, and about twenty-four shallots; add about a pint of stock. Set the stewpan on a stove to draw down for half an hour, then put three quarts of good stock; let it boil for two hours, then strain it off, and reduce the liquid to one pint; add sherry wine to it, and put aside till the pie is baked. When the pie has been out of the oven for half an hour, boil what was strained from the bones, &c. of the partridges, and stir it into the pie. Let it stand for twenty-four hours before it is eaten. —N.B. Do not take any of the fat from the pie, as that is what preserves it. A

pie made in this manner will be eatable for three months after it is cut; in short, it cannot spoil in any reasonable time. All cold pies are made in this manner. Either poultry or game that is put into a raised crust, and intended not to be eaten until cold, should be boned, and the liquor that is to fill up the pie made from the bones, &c.

**398. TO EXTINGUISH A FIRE IN A CHIMNEY.**—So many serious fires have been caused by chimneys catching fire, and not being quickly extinguished, that the following method of doing this should be made generally known.—Throw some powdered brimstone on the fire in the grate, or ignite some on the hob, and then put a board or something in the front of the fireplace, to prevent the fumes descending into the room. The vapour of the brimstone ascending the chimney, will then effectually extinguish the soot on fire. (See 28.)

**399. SUPERFLUOUS HAIR.**—Any remedy is doubtful; many of those commonly used are dangerous. The safest plan is as follows:—The hairs should be perseveringly plucked up by the roots, and the skin, having been washed twice a day with warm soft water, without soap, should be treated with the following wash, commonly called MILK OF ROSES.—Beat four ounces of sweet almonds in a mortar, and add half an ounce of white sugar during the process; reduce the whole to a paste by pounding; then add, in small quantities at a time, eight ounces of rose water. The emulsion thus formed, should be strained through a fine cloth, and the residue again pounded, while the strained fluid should be bottled in a large stopped vial. To the pasty mass in the mortar add half an ounce of sugar, and eight ounces of rose water, and strain again. This process must be repeated three times. To the thirty-two ounces of fluid, add twenty grains of the bichloride of mercury, dissolved in two ounces of alcohol, and shake the mixture for five minutes. The fluid should be applied

with a towel, immediately after washing, and the skin gently rubbed with a dry cloth till perfectly dry. Wilson, in his work on *Healthy Skin*, writes as follows:—"Substances are sold by the perfumers called depilatories, which are represented as having the power of removing hair. But the hair is not destroyed by these means, the root and that part of the shaft implanted within the skin still remain, and are ready to shoot up with increased vigour as soon as the depilatory is withdrawn. The effect of the depilatory is the same, in this respect, as that of a razor, and the latter is, unquestionably, the better remedy. It must not, however, be imagined that depilatories are negative remedies, and that, if they do no permanent good, they are, at least, harmless; that is not the fact; they are violent irritants, and require to be used with the utmost caution. \* \* \* \* After all, the safest depilatory is a pair of tweezers and patience."

400. DISINFECTING LIQUID.—In a wine bottle of cold water, dissolve two ounces acetate of lead, (sugar of lead;) and then add two (fluid) ounces of strong nitric acid (aqua fortis). Shake the mixture and it will be ready for use.—A very small quantity of the liquid, in its strongest form, should be used for cleansing all kinds of chamber utensils. For removing offensive odours, clean cloths thoroughly moistened with the liquid, diluted with eight or ten parts of water, should be suspended at various parts of the room.—In this case the offensive and deleterious gases are neutralized by chemical action. Fumigation in the usual way is only the substitution of one odour for another. In using the above, or any other disinfectant, let it never be forgotten that *fresh air*—and plenty of it, is cheaper and more effective than any other material.

401. CLEANLINESS.—"I have more than once expressed my conviction that the humanizing influence of habits of cleanliness and of those decent observations which imply self-respect—the

best, indeed the only foundation of respect for others—has never been sufficiently acted on. A clean, fresh, and well-ordered house exercises over its inmates a moral no less than a physical influence, and has a direct tendency to make the members of a family sober, peaceable, and considerate of the feelings and happiness of each other; nor is it difficult to trace a connexion between habitual feelings of this sort and the formation of habits of respect for property, for the laws in general, and even for those higher duties and obligations the observance of which no laws can enforce."—*Dr. Southwood Smith.* (See 231.)

402. DYING.—The filaments from which stuffs of all kinds are fabricated, are derived either from the animal or vegetable kingdom. We recognise the former by the property they possess of liberating ammonia on being treated with potass; while the latter afford a liquor having an acid reaction under the same treatment. The animal kingdom furnishes three varieties—silk, wool, and the furs, &c., of various animals; the vegetable kingdom also three—flax, hemp, and cotton: all of which require certain preliminary preparations to render them fit for the dyer, which do not come within our province, our space only admitting of a rapid glance at the production of the various colours.

403. GENERAL OBSERVATIONS.—The various shades produced by colouring matters may be classed in one or other of the following groups:—

- |                     |                   |
|---------------------|-------------------|
| 1. Blues            | } <i>Simple.</i>  |
| 2. Reds             |                   |
| 3. Yellows          |                   |
| 4. Violets          |                   |
| 5. Orange colours   | } <i>Binary.</i>  |
| 6. Greens           |                   |
| 7. Compound colours | } <i>Ternary.</i> |
| 8. Black.           |                   |

Some colours adhere at once to the stuff, and are called *substantial colours*; while others require that the material to be dyed should undergo some previous preparation in order to render it

permanent. The substances used to fix the colouring matters are called *mordants*, which should possess four qualifications:—1. They should possess an equal affinity for the fibre of the material and the colouring matter. 2. They should be incapable of injuring or destroying either by prolonged action. 3. They should form, with the colour, a compound capable of resisting the action of air and water. 4. They should be capable of readily conforming to the various operations of the dyer.

404. *THE MORDANTS*.—For the reasons just given, the acetate or tartrate of iron is preferable to the sulphate; and the acetate or tartrate of alumina to alum.

405. *For reds, yellows, greens, and pinks*.—Aluminous mordants are to be used.

406. *For blacks, browns, puce, and violets*.—The acetate or tartrate of iron must be employed.

407. *For scarlets*, use a tin mordant, made by dissolving in strong nitric acid one-eighth of its weight of sal-ammoniac; then adding by degrees one-eighth of its weight of tin, and diluting the solution with one-fourth of its weight of water.

408. *CALICO, LINEN, AND MUSLIN. Blue*.—Wash well to remove dressing, and dry; then dip in a strong solution of sulphate of indigo—partly saturated with potash—and hang up. Dry a piece to see if the colour is deep enough, if not, dip again.

409. *Saxon Blue*.—Boil the article in alum, and then dip in a strong solution of chemic blue.

410. *Buff*.—Boil an ounce of anatto in three quarts of water, add two ounces of potash, stir well, and put in the calico while boiling, and stir well for five minutes; remove and plunge into cold pump water, hang up the articles without wringing, and when almost dry, fold.

411. *Pink*.—Immerse in the acetate of alumina mordant, and then in the colouring matter of a pink saucer.

412. *Green*.—Boil the article in an

alum mordant, and then in a solution of indigo mixed with any of the yellow dyes, until the proper colour is obtained.

413. *Yellow*.—1. Cut potatoe tops when in flower, and express the juice; steep articles in this for forty-eight hours. 2. Dip in a strong solution of weld after boiling in an aluminous mordant. Turmeric, fustic, anatto, &c., will answer the same as weld.

414. *CLOTH. Black*.—Impregnate the material with the acetate of iron mordant, and then boil in a decoction of madder and logwood.

415. *Madder red*.—Boil the cloth in a weak solution of pearl-ash—an ounce to a gallon of water—wash, dry, and then steep in a decoction of bruised nutgalls. After drying, it is to be stepped twice in warm alum water, then dried and boiled in a decoction made of three quarters of a pound of madder to every pound of the article. It should then be taken out and dried, and steeped in a second bath in the same manner. When dyed, the articles should be washed in warm soap and water, to remove a dun-coloured matter given out by the madder.

416. *Scarlet*.—Three quarters of a pint of a tin mordant, made by dissolving three pounds of tin in sixty pounds of hydrochloric acid, is added to every pound of lac dye, and digested for six hours. To dye twenty-five pounds of cloth, a tin boiler of seventy-five gallons capacity should be filled nearly full with water, and a fire kindled under it. When the heat is 150 deg. Fahr., half a handful of bran and two ounces of tin mordant are to be thrown into it. The froth which arises is skimmed off, the liquor is made to boil, and two pounds and three quarters of lac dye, previously mixed with a pound and three quarters of the solvent, and fourteen ounces of the tin solvent are added. Immediately afterwards two pounds and three quarters of tartar, and a pound of ground sumach, both tied up in a linen bag, are to be added and suspended in the bath for five minutes. The fire being

withdrawn, five gallons of cold water, and two pints and three quarters of the mordant being poured into the bath, the cloth is immersed in it. The fire is then replaced, and the liquid made to boil rapidly for an hour, when the cloth is removed and washed in pure water.

417. *Yellow*.—Use No. 2. for calico. Quercitron and weld produce a solid yellow; fustic, a very brilliant tint; white turmeric yields a less solid yellow.

418. *FEATHERS. Black*.—Use the same as for cloth.

419. *Blue*.—Every shade may be given by indigo—or dip in silk dye.

420. *Crimson*.—Dip in acetate of alumina mordant, then in a boiling-hot decoction of Brazil wood—and, last of all, pass through a bath of cudbear.

421. *Pink, or Rose colour*, is given by safflower and lemon juice.

422. *Deep red*.—Proceed as for crimson, omitting the cudbear bath.

423. *Yellow*.—Mordant with acetate of alumina, and dip in a bath of turmeric, or weld.

424. *HAIR. Black*.—As the object in view is simply to dye the hair without tinging the skin, the following will be found the best:—Take equal parts of litharge and lime; mix well, and form into a paste with water, if a black is desired; with milk, if brown. Clean the head with a small-tooth comb, and then well wash the hair with soda and water to free it from grease; then lay on the paste pretty thick, and cover the head with oil-skin, or a cabbage-leaf: after which go to bed. Next morning the powder should be carefully brushed away, and the hair oiled. (See 270, 271.)

425. *LEATHER. Black*.—Use No. 4 *Black stain*, and polish with oil.

426. *Gloves, Nankkeen*.—Steep saffron in boiling hot soft water for about twelve hours; sew up the tops of the gloves, to prevent the dye staining the insides, wet them over with a sponge dipped in the liquid. A tea-cupful of dye will do a pair of gloves.

427. *Gloves, Purple*.—Boil four ounces of logwood, and two ounces of roche

alum, in three pints of soft water, till half wasted; strain, and let it cool. Sew up the tops, go over the outside with a brush or sponge twine; then rub off the loose dye with a coarse cloth. Beat up the white of an egg, and rub it over the leather with a sponge. Vinegar will remove the stain from the hands.

428. *SILK. Black*.—Use the same as for cloth, but black dyeing is difficult.

429. *Blue*.—1. Wash quite clean, rinse well, and then dip in a hot solution of sulphate of iron, after a short time take it out and rinse again. Have ready in another vessel a hot solution of prussiate of potash, to which a small quantity of sulphuric acid has been added. Dip the silk in this liquid; on removal rinse in clean water, and expose to the air to dry. 2. Wash well, rinse, wring out, and then dip in the following:—Boil a pound of indigo, two pounds of woad, and three ounces of alum in a gallon of water. When the silk is of a proper colour, remove, rinse, and dry.

430. *Carnation*.—Boil two gallons of wheat and an ounce of alum in four gallons of water, strain through a fine sieve; dissolve half a pound more of alum and white tartar; add three pounds of madder, then put in the silk at a moderate heat.

431. *Madder Red*.—Use the dye for cloth.

432. *Yellow*.—Take clear wheat bran liquor fifteen pounds, in which dissolve three quarters of a pound of alum; boil the silk in this for two hours, and afterwards take half a pound of weld, and boil it till the colour is good. Nitre used with alum and water in the first boiling fixes the colour.

433. *Wool. Blue*.—Boil in a decoction of logwood, and sulphate or acetate of copper.

434. *Brown*.—Steep in an infusion of green walnut-peels.

435. *Drab*.—Impregnate with brown oxide of iron, and then dip in a bath of quercitron bark. If sumach is added, it will make the colour a dark brown.

436. *Green*.—First imbue with the blue, and then with the yellow dye.

437. *Orange*.—Dye first with the red dye for cloth, and then with a yellow.

438. *Red*.—Take four and a half pounds of cream of tartar, four and a quarter pounds of alum; boil the wool gently for two hours; let it cool, and wash the following day in pure water. Infuse twelve pounds of madder for half an hour with a pound of chloride of tin in lukewarm water, filter through canvas, remove the dye from the canvas, and put in the bath, which is to be heated to 100 deg. Fahr.; add two ounces of aluminous mordant, put the wool in, and raise to boiling heat. Remove the wool, wash, and soak for a quarter of an hour in a solution of white soap in water.

439. *Yellow*.—Dye with that used for calico, &c.

440. *CALF'S HEAD PIE*.—Boil the head an hour and a half, or rather more. After dining from it, cut the remaining meat off in slices. Boil the bones in a little of the liquor for three hours; then strain it off, and let it remain till next day; then take off the fat. *To make the Pie*.—Boil two eggs for five minutes; let them get cold, then lay them in slices at the bottom of a pie-dish, and put alternate layers of meat and jelly, with pepper and chopped lemon also alternately, till the dish is full; cover with a crust and bake it. Next day turn the pie out upside down.

441. *CARPETS*.—If the corner of a carpet gets loose and prevents the door opening, or trips every one up that enters the room, nail it down at once. A dog-eared carpet marks the sloven as well as the dog-eared book. An English gentleman, travelling some years ago in Ireland, took a hammer and tacks with him, because he found dog-eared carpets at all the inns where he rested. At one of these inns he tacked down the carpet which, as usual, was loose near the door, and soon afterwards rang for his dinner. While the carpet was loose the door

could not be opened without a hard push; so when the waiter came up, he just unlatched the door, and then going back a couple of yards, he rushed against it, as his habit was, with a sudden spring to force it open. But the wrinkles of the carpet were no longer there to stop it, and not meeting with the expected resistance, the unfortunate waiter fell full sprawl into the room. It had never entered his head that so much trouble might be saved by means of a hammer and half-a-dozen tacks, until his fall taught him that make-shift is a very unprofitable kind of shift. There are a good many houses in England where a similar practical lesson might be of service.—*House Furnishing.*

442. *MINCE MEAT*.—Take seven pounds of currants well picked and cleaned; of finely chopped beef suet, the lean of a sirloin of beef minced raw, and finely chopped apples (Kentish or Golden Pippins), each three and a half pounds; citron, lemon peel, and orange peel cut small, each half a pound; fine moist sugar, two pounds; mixed spice, an ounce; the rind of four lemons and four Seville oranges; mix well, and put in a deep pan. Mix a bottle of brandy and white wine, the juice of the lemons and oranges that have been grated, together in a basin; pour half over, and press down tight with the hand, then add the other half and cover closely. Some families make one year to use the next.

443. *ELEGANT BREAD PUD-DING*.—Take light white bread, and cut in thin slices. Put into a pudding-shape a layer of any sort of preserve, then a slice of bread, and repeat until the mould is almost full. Pour over all a pint of warm milk, in which four beaten eggs have been mixed; cover the mould with a piece of linen, place it in a saucepan with a little boiling water, let it boil twenty minutes, and serve with pudding sauce.

444. *CRAB, MOCK*.—Take any required quantity of good fat mellow cheese, pound it well in a mortar,

incorporating made mustard, salad oil, vinegar, pepper (cayenne is the best), and salt sufficient to season and render it about the consistence of the cream of a crab. Add and mix well half a pint or more of pickled shrimps, and serve in a crab-shell, or on a dish, garnished with slices of lemon.

**445. CURRIED BEEF, MADRAS WAY.**—Take about two ounces of butter, and place it in a saucepan, with two small onions cut up into slices, and let them fry until they are a light brown; then add a table-spoonful and a half of curry powder, and mix it up well. Now put in the beef cut into pieces about an inch square; pour in from a quarter to a third of a pint of milk, and let it simmer for thirty minutes; then take it off, and place it in a dish, with a little lemon juice. Whilst cooking stir constantly, to prevent it burning. Send to table with a wall of mashed potatoes or boiled rice round it. It greatly improves any curry to add with the milk a quarter of a cocoa-nut, scraped very small, and squeezed through muslin with a little water; this softens the taste of the curry, and, indeed, no curry should be made without it.

**446. CHOICE OF FRIENDS.**—We should ever have it fixed in our memories, that *by the character of those whom we choose for our friends, our own is likely to be formed*, and will certainly be judged of by the world. We ought, therefore, to be slow and cautious in contracting intimacy; but when a virtuous friendship is once established, we must ever consider it as a sacred engagement.—*Dr. Blair.*

**447. STRASBURG POTTED MEAT.**—Take a pound and a half of the rump of beef, cut into dice, and put it in an earthen jar, with a quarter of a pound of butter at the bottom, tie the jar close up with paper, and set over a pot to boil: when nearly done, add cloves, mace, allspice, nutmeg, salt, and cayenne pepper to taste; then boil till tender, and let it get cold. Pound the meat, with four anchovies washed and boned;

add a quarter of a pound of oiled butter, work it well together with the gravy, warm a little, and add cochineal to colour. Then press into small pots, and pour melted mutton suet over the top of each.

**448. HAMS, TONGUES, &c., GLAZING FOR.**—Boil a shin of beef twelve hours in eight or ten quarts of water; draw the gravy from a knuckle of veal in the same manner; put the same herbs and spices as if for soup, and add the whole to the shin of beef. It must be boiled till reduced to a quart. It will keep good for a year; and when wanted for use, warm a little, and spread over the ham, tongue, &c., with a feather.

**449. BOLOGNA SAUSAGES.**—Take equal quantities of bacon, fat and lean, beef, veal, pork, and beef suet; chop them small, season with pepper, salt, &c., sweet herbs, and sage rubbed fine. Have a well-washed intestine, fill, and prick it; boil gently for an hour, and lay on straw to dry. They may be smoked the same as hams.

**450. FRUIT STAINS IN LINEN.**—To remove them, rub the part on each side with yellow soap, then tie up a piece of pearlsh in the cloth, &c., and soak well in hot water, or boil; afterwards expose the stained part to the sun and air until removed.

**451. PRESERVING THE COLOUR OF DRESSES.**—The colours of merinos, mousseline-de-laines, ginghams, chintzes, printed lawns, &c., may be preserved by using water that is only milk-warm; making a lather with white soap, before you put in the dress, instead of rubbing it on the material; and stirring into a first and second tub of water a large table-spoonful of ox-gall. The gall can be obtained from the butcher, and a bottle of it should always be kept in every house. No coloured articles should be allowed to remain long in the water. They must be washed fast, and then rinsed through two cold waters. Into each rinsing water, stir a tea-spoonful of vinegar, which will help to brighten the colours; and after rinsing,

hang them out immediately. When *ironing-dry* (or still a little damp), bring them in; have irons ready heated, and iron them at once, as it injures the colours to allow them to remain damp too long, or to sprinkle and roll them up in a covering for ironing next day. If they cannot be conveniently ironed immediately, let them hang till they are quite dry; and then damp and fold them on the following day, a quarter of an hour before ironing. The best way is not to do coloured dresses on the day of the general wash, but to give them a morning by themselves. They should only be undertaken in clear bright weather. If allowed to freeze, the colours will be irreparably injured. We need scarcely say that no coloured articles should ever be boiled or scalded. If you get from a shop a slip for testing the durability of colours, give it a fair trial by washing it as above; afterwards, pinning it to the edge of a towel, and hanging it to dry. Some colours (especially pinks and light-greens), though they may stand perfectly well in washing, will change as soon as a warm iron is applied to them; the pink turning purplish, and the green bluish. No coloured article should be smoothed with a *hot iron*. (See 27, 42, 115.)

#### 452. SWEET BAGS FOR LINEN.

—These may be composed of any mixtures of the following articles:—flowers dried and pounded; powdered cloves, mace, nutmeg, cinnamon; leaves:—dried and pounded—of mint, balm, dragon-wort, southern-wood, ground-ivy, laurel, hyssop, sweet marjorum, origanum, rosemary; woods, such as cassia, juniper, rhodium, sandal-wood, and rose-wood; roots of angelica, zedoary, orris; all the fragrant balsams; ambergris, musk, and civet. These latter should be carefully used on linen.

453. WEDDING-RINGS. —The custom of wearing wedding-rings, appears to have taken its rise among the Romans. Before the celebration of their nuptials, there was a meeting of friends at the house of the lady's father, to settle articles of the marriage con-

tract, when it was agreed that the dowry should be paid down on the wedding-day or soon after. On this occasion there was commonly a feast, at the conclusion of which the man gave to the woman, as a pledge, a ring, which she put on the fourth finger of her left hand, because it was believed that a nerve reached thence to the heart, and a day was then named for the marriage. (See 259.)

#### 454. TO AVOID CATCHING COLD.

—Accustom yourself to the use of sponging with cold water every morning on first getting out of bed. It should be followed with a good deal of rubbing with a wet towel. It has considerable effect in giving tone to the skin, and maintaining a proper action in it, and thus proves a safeguard to the injurious influence of cold and sudden changes of temperature. Sir Astley Cooper said, "The methods by which I have preserved my own health are—temperance, early rising, and sponging the body every morning with cold water, immediately after getting out of bed; a practice which I have adopted for thirty years without ever catching cold."

455. CLEANING JAPANED WAITERS, URNS, &c.—Rub on with a sponge a little white soap and some lukewarm water, and wash the waiter or urn quite clean. Never use hot water, as it will cause the japan to scale off. Having wiped it dry, sprinkle a little flour over it; let it rest a while, and then rub it with a soft dry cloth, and finish with a silk handkerchief. If there are white heat marks on the waiters, they will be difficult to remove. But you may try rubbing them with a flannel dipped in sweet oil, and afterwards in spirits of wine. Waiters and other articles of *papier maché* should be washed with a sponge and cold water, without soap, dredged with flour while damp; and after a while wiped off, and then polished with a silk handkerchief.

456. CEREMONIES.—All ceremonies are in themselves very silly things; but yet a man of the world should

know them. They are the outworks of manners and decency, which would be too often broken in upon, if it were not for that defence which keeps the enemy at a proper distance. It is for that reason I always treat fools and cock-combs with great ceremony, true good-breeding not being a sufficient barrier against them.

**457. TO CLEAN LOOKING-GLASSES, MIRRORS, &c.**—If they should be hung so high that they cannot be conveniently reached, have a pair of steps to stand upon; but mind that they stand steady. Then take a piece of soft sponge, well washed and cleaned from everything gritty, just dip it into water and squeeze it out again, and then dip it into some spirits of wine. Rub it over the glass; dust it over with some powder blue, or whiting sifted through muslin; rub it lightly and quickly off again, with a cloth; then take a clean cloth, and rub it well again, and finish by rubbing it with a silk handkerchief. If the glass be very large, clean one half at a time, as otherwise the spirit of wine will dry before it can be rubbed off. If the frames are not varnished, the greatest care is necessary to keep them quite dry, so as not to touch them with the sponge, as this will discolour or take off the gilding. To clean the frames, take a little raw cotton in the state of wool, and rub the frames with it; this will take off all the dust and dirt without injuring the gilding. If the frames are well varnished, rub them with spirit of wine, which will take out all spots, and give them a fine polish. Varnished doors may be done in the same manner. Never use any cloth to frames or drawings, or unvarnished oil paintings, when cleaning and dusting them.

**458. SCONES.**—Flour, two pounds; bi-carbonate of soda, quarter of an ounce; salt, quarter of an ounce; sour buttermilk, one pint, more or less. Mix to the consistence of light dough, and roll out about half an inch thick, and cut them out to any shape you please, and bake on a *girdle* over a clear fire about ten

or fifteen minutes; turning them to brown on both sides—or they may be done on a hot plate, or toasting-stove. A *girdle* is a thin plate of cast iron about twelve or fourteen inches in diameter, with a handle attached to hang it up by.—These scones are excellent for tea, and may be eaten either cold or hot, buttered, or with cheese.

**459. UNFERMENTED CAKES, &c.** The retail price of soda is 8d. per pound avoirdupois; and the acid, known under the more common name of spirits of salts, is 4d. per pound avoirdupois. The price of the acid and soda by the ounce is 1d. each.

**460. TEA CAKES.**—Take of flour, one pound; sugar, one ounce; butter, one ounce; muriatic acid, two drachms; bi-carbonate of soda, two drachms; milk, six ounces; water, six ounces. Rub the butter into the flour; dissolve the sugar and soda in the milk, and the acid in the water. First add the milk, &c. to the flour, and partially mix; then the water and acid, and mix well together; divide into three portions, and bake twenty-five minutes. Flat round tins or earthen pans are the best to bake them in. If the above is made with baking powder, a teaspoonful may be substituted for the acid and soda in the above receipt, and all the other directions carried out as stated above. If buttermilk is used, the acid, milk, and water, must be left out.

**461. UNFERMENTED CAKE.**—Take of flour, one pound and a-half; bi-carbonate of soda, three drachms; muriatic acid, three drachms; sugar, one ounce and a-half; butter, one ounce and a-half; milk, twenty ounces; currants, six ounces, more or less. Mix the soda and butter into the flour by rubbing them together; next dissolve the sugar in the milk, and diffuse the acid through it by stirring; then mix the whole intimately, adding fruit at discretion; and bake in a tin or earthen pan.

**462. LUNCHEON CAKE.**—Take of flour, one pound; muriatic acid, two

drachms; bi-carbonate of soda, two drachms; sugar, three ounces; butter, three ounces; currants, four ounces; milk one pint or twenty ounces; bake one hour in a quick oven.

463. NICE PLUM CAKE.—Take of flour, one pound; bi-carbonate of soda, quarter of an ounce; butter, six ounces; loaf sugar, six ounces; currants, six ounces; three eggs; milk, about four ounces; bake one hour and a half in a tin or pan.

464. LEMON BUNS.—Take of flour, one pound; bi-carbonate of soda, three drachms; muriatic acid, three drachms; butter, four ounces; loaf sugar, four ounces; one egg; essence of lemon, six or eight drops; make into twenty buns and bake in a quick oven fifteen minutes.

465. SODA CAKE.—Take of flour half a pound; bi-carbonate of soda, two drachms; tartaric acid, two drachms; butter four ounces; white sugar, two ounces; currants, four ounces; two eggs; warm milk, half a teacupful.

466. EXCELLENT BISCUITS.—Take of flour two pounds; carbonate of ammonia, three drachms, in fine powder; white sugar, four ounces; arrowroot, one ounce; butter, four ounces; one egg; mix into stiff paste with new milk, and beat them well with a rolling-pin for half an hour; roll out thin, and cut them out with a docker, and bake in a quick oven for fifteen minutes.

467. WINE BISCUITS.—Take of flour half a pound; butter, four ounces; sugar, four ounces; two eggs; carbonate of ammonia, one drachm; white wine enough to mix a proper consistence, and cut out with a glass.

468. PLAIN SUET PUDDING.—Take of flour, one pound and a half; bi-carbonate of soda, three drachms; muriatic acid, three drachms; beef-suet, four ounces; powdered ginger, half a drachm; water or milk one pint. Mix according to the directions given for the tea-cake, and boil or steam for two hours.

469. PLUM PUDDING.—Take of flour, one pound; bi-carbonate of soda, two drachms; muriatic acid, two drachms;

beef-suet, eight ounces; currants, eight ounces; nutmeg and orange-peel, grated fine, quarter of an ounce; three eggs. To be boiled or steamed four hours.

470. BATTER PUDDING.—Take of flour, four ounces; bi-carbonate of soda, two drachms; a little sugar, and one egg. Mix with milk to a thin batter, and bake in a well-buttered tin, in a brisk oven half an hour. A few currants may be strowed in the bottom of the tin if preferred.

471. PASTRY FOR TARTS, &c.—Take of flour one pound; bi-carbonate of soda, two drachms; muriatic acid, two drachms; butter, six ounces. Water enough to bring it to the consistence required.

472. BREAD PUDDING.—Unfermented brown bread, two ounces; milk, half a pint; one egg; sugar, quarter of an ounce. Cut the bread into slices, and pour the milk over it boiling hot; let it stand till well soaked, and stir in the egg and sugar, well beaten, with a little grated nutmeg; and bake or steam for one hour.

473. SUGAR-BISCUITS.—Cut the butter into the flour. Add the sugar and carraway seeds. Pour in the brandy, and then the milk. Lastly, put in the pearl-ash. Stir all well with a knife, and mix it thoroughly, till it becomes a lump of dough. Flour your paste-board, and lay the dough on it. Knead it very well. Divide it into eight or ten pieces, and knead each piece separately. Then put them all together, and knead them very well into one lump. Cut the dough in half, and roll it out into sheets, about half an inch thick. Beat the sheets of dough very hard on both sides with the rolling-pin. Cut them out into round cakes with the edge of a tumbler. Butter iron pans, and lay the cakes in them. Bake them of a very pale brown. If done too much, they will lose their taste. Let the oven be hotter at the top than at the bottom. These cakes kept in a stone jar, closely covered from the air, will continue perfectly good for several months.

#### 474. BALLS AND EVENING PARTIES.

475. An invitation to a ball should be given *at least* a week beforehand.

476. Upon entering, first address the lady of the house; and after her, the nearest acquaintances you may recognise in the house.

477. If you introduce a friend, make him acquainted with the names of the chief persons present. But first present him to the lady of the house; and to the host.

478. Appear in full dress.

479. Always wear gloves.

480. Do not wear rings on the outside of your gloves.

481. Avoid an excess of jewellery.

482. Do not select the same partner frequently.

483. Distribute your attentions as much as possible.

484. Pay respectful attention to elderly persons.

485. Be cordial when serving refreshments, but not importunate.

486. If there are more dancers than the room will accommodate, do not join in every dance.

487. In leaving a large party it is unnecessary to bid farewell, and improper to do so before the guests.

488. A Paris card of invitation to an evening party usually implies that you are invited for the season.

489. In balls and large parties there should be a table for cards, and two packs of cards placed upon each table.

490. Chess and all unsociable games should be avoided.

491. Although many persons do not like to play at cards except for a stake, the stakes agreed to at parties should be very trifling, so as not to create excitement or discussion.

492. The host and hostess should look after their guests, and not confine their attentions. They should, in fact, assist those chiefly who are the least known in the room.

493. Avoid political and religious discussions. If you have a "hobby," keep it to yourself.

494. After dancing, conduct your partner to a seat.

495. Resign her as soon as her next partner advances.

(For the *Figures of Dances*, consult the *Index*.—See 864.)

496. TO PREVENT THE SMOKING OF A LAMP.—Soak the wick in strong vinegar, and well dry it before you use it.

497. EGGS MAY BE PRESERVED by applying with a brush a solution of gum-arabic to the shells, and afterwards packing them in dry charcoal dust.

498. TO RENDER SHOES WATER-PROOF.—Warm a little bee's-wax and mutton suet until it is liquid, and rub some of it slightly over the edges of the sole where the stitches are. (See 70.)

499. TO CLEAN CANE CHAIRS.—Sponge them until soaked, with soap and hot water.

500. MARBLE MAY BE CLEANED by mixing up a quantity of the strongest soap-les with quick-lime, to the consistence of milk, and laying it on the marble for twenty-four hours; clean it afterwards with soap and water.

501. A GREEN PAINT FOR GARDEN-STANDS, &c., may be obtained by mixing a quantity of mineral green and white lead, ground in turpentine, with a small portion of turpentine varnish for the first coat; for the second put as much varnish in the colour as will produce a good gloss.

502. INK-SPOTS may be taken out of mahogany by applying spirits of salt.

503. STAINS may be removed from the hands by washing them in a small quantity of oil of vitriol and cold water without soap.

504. WAX may be taken out of cloth by holding a red-hot iron within an inch or two of the marks, and afterwards rubbing them with a soft clean rag.

505. SILK ARTICLES should not be kept folded in white papers, as the chlorido of lime used in bleaching the paper will impair the colour of the silk.

506. MILDEWED LINEN may be restored by soaping the spots, while

wet, 'covering them with fine chalk scraped to powder, and well rubbed in.

**507. TO TAKE INK-STAINS OUT OF A COLOURED TABLE-COVER.**—Dissolve a teaspoonful of oxalic acid in a tea-cup of hot water; rub the stained part well with the solution.

**508. BURN.**—The first application to a burn should be sweet oil, putting it on immediately, till other remedies can be prepared.

**509. A HALF-WORN CARPET** may be made to last longer by ripping it apart, and transposing the breadths.

**510. MEDICINE STAINS** may be removed from silver spoons by rubbing them with a rag dipped in sulphuric acid, and washing it off with soap-suds.

**511. PAPIER-MÂCHÉ** articles should be washed with a sponge and cold water without soap, dredged with flour while damp, and polished with a flannel.

**512. TO LOOSEN A GLASS STOPPER.**—Pour round it a little sweet oil close to the mouth of the bottle, and lay it near the fire; afterwards wrap a thick cloth round the end of a stick and strike the stopper gently. (See 254.)

**513. GLASS** should be washed in cold water, which gives it a brighter and clearer look than when cleansed with warm water.

**514. IRON WIPERS.**—Old soft towels, or pieces of old sheets or table-cloths, make excellent iron wipers.

**515. TO BLEACH A FADED DRESS.**—Wash it well in hot suds, and boil it until the colour seems to be gone, then wash, and rinse, and dry it in the sun; if still not quite white repeat the boiling.

**516. FLANNEL** should always be washed with white soap, and in warm but not boiling water.

**517. A HAT** should be brushed every day with a hat-brush, and twice a-day in dusty weather.

**518. RINGS** that have stones in them should always be taken off the finger when the hands are washed, else they become discoloured.

**519. COLD GREEN TEA,** very

strong, and sweetened with sugar, will, when set about in saucers, attract flies and destroy them.

**520. CLOTHES CLOSETS** that have become infested with moths should be well rubbed with a strong decoction of tobacco, and repeatedly sprinkled with spirits of camphor.

**521. THE STING OF A NETTLE** may be cured by rubbing the part with rosemary, mint, or sage leaves.

**522. CHARCOAL FUMES.**—The usual remedies for persons overcome with the fumes of charcoal in a close apartment are, to throw cold water on the head and to bleed immediately; also apply mustard or hartshorn to the soles of the feet.

**523. AN EVER-DIRTY HEARTH,** and a grate always choked with cinders and ashes, are infallible evidences of bad house-keeping.

**524. TO EXTINGUISH A FIRE** in the chimney, besides any water at hand, throw on it salt, or a handful of flour of sulphur as soon as you can obtain it; keep all the doors and windows tightly shut, and hold before the fire-place a blanket or some woollen article to exclude the air. (See 695.)

**525. READING IN BED** at night should be avoided, as, besides the danger of an accident, it never fails to injure the eyes.

**526. IN ESCAPING FROM A FIRE,** creep or crawl along the room with your face close to the ground. Children should be early taught how to press out a spark when it happens to reach any part of their dress, and also that running into the air will cause it to blaze immediately. (See 695.)

**527. LIME WATER** beaten up with sweet oil is an excellent ointment for burns.

**528. PAPER FIRE-SCREENS** should be coated with transparent varnish, otherwise they will soon become soiled and discoloured.

**529. THE BEST LAMP-OIL** is that which is clear and nearly colourless, like water.

**530. OIL-GREAS** may be removed

from an hearth by covering it immediately with thick hot ashes, or with burning coals.

531. **CANDLES** improve by keeping a few months. If wax candles become discoloured or soiled, they may be restored by rubbing them over with a clean flannel slightly dipped in spirits of wine.

532. **IN LIGHTING CANDLES** always hold the match to the side of the wick, and not over the top.

533. **IN CHOOSING PAPER FOR A ROOM**, avoid that which has a variety of colours, or a large showy figure, as no furniture can appear to advantage with such. Large figured papering makes a small room look smaller.

534. **FOR KEEPING A DOOR OPEN**, place a large brick covered neatly with a piece of carpeting against the door.

535. A **STAIR-CARPET** should never be swept down with a long broom, but always with a short-handled brush, and a dust-pan held closely under each step of the stairs.

536. **OIL-CLOTH** should never be scrubbed with a brush, but, after being first swept, it should be cleansed by washing with a large soft cloth and lukewarm or cold water. On no account use soap or hot water, as either will bring off the paint.

537. **STRAW-MATTING** may be cleaned with a large coarse cloth dipped in salt and water, and then wiped dry: the salt prevents the matting from turning yellow.

538. **OIL-PAINTINGS** hung over the mantle-piece are liable to wrinkle with the heat.

539. **OTTOMANS** and **SOFAS**, whether covered with cloth, damask, or chintz, will look much the better for being cleaned occasionally with bran and flannel.

540. **FURNITURE** made in the winter, and brought from a cold warehouse into a warm apartment, is very liable to crack.

541. **ROSEWOOD FURNITURE** should be rubbed gently, every day

with a clean soft cloth to keep it in order.

542. **DINING-TABLES** may be polished by rubbing them for some time with a soft cloth and a little cold-drawn linseed oil.

543. **IRON-STAINS** may be removed from marble by wetting the spots with oil of vitriol, or with lemon-juice, or with oxalic acid diluted in spirits of wine, and, after a quarter of an hour, rubbing them dry with a soft linen cloth.

544. **SILVER** and **PLATED WARE** should be washed with a sponge and warm soapsuds every day after using, and wiped dry with a clean soft towel.

545. **CHINA TEA-POTS** are the safest, and, in many respects, the most pleasant. Wedgwood ware is very apt, after a time, to acquire a disagreeable taste.

546. **JAPPANED URNS, WAITERS, &c.**, should be cleaned with a sponge and cold water, finishing with a soft dry cloth.

547. **TO CLEAN LOOKING-GLASSES**.—First wash the glass all over with lukewarm soap-suds and a sponge. When dry, rub it bright with a buckskin and a little prepared chalk finely powdered.

548. A **MAHOGANY FRAME** should be first well dusted, and then cleaned with a flannel dipped in sweet oil.

549. **BRONZED CHANDELIERS, LAMPS, &c.**, should be merely dusted with a feather-brush, or with a soft cloth, as washing them will take off the bronzing.

550. **TO CLEAN KNIVES AND FORKS**.—Wash the blades in warm (but not hot) water, and afterwards rub them lightly over with powdered rottenstone wet to a paste with a little cold water, then polish them with a clean cloth.

551. **BLACKING FOR STOVES** may be made with half a pound of black lead finely powdered, and (to make it stick) mix with it the whites of three eggs well beaten; then dilute it with sour beer or porter till it becomes as

thin as shoe-blackening; after stirring it, set it over hot coals to simmer for twenty minutes; when cold it may be kept for use.

552. FOR CLEANING BRASSES belonging to mahogany furniture either powdered whiting or scraped rotten-stone mixed with sweet-oil and rubbed on with a buckskin is good.

553. THE BEST COVERING FOR A KITCHEN FLOOR is a thick unfigured oil-cloth, of one colour.

554. MEAT may be kept several days in the height of summer, sweet and good, by lightly covering it with bran, and hanging it in some high or windy room, or in a passage where there is a current of air.

555. WHEN VELVET GETS PLUSHED from pressure, hold the parts over a basin of hot water, with the lining of the dress next the water; the pile will soon rise and assume its original beauty.

556. A TIGHT BOOT OR SHOE goes on easier when thoroughly warmed by turning the soles next to the fire.

557. GLASS VESSELS, and other utensils, may be purified and cleaned by rinsing them out with powdered charcoal.

558. HOUSEHOLDERS would exercise a wise precaution against fires by directing that the last person up should perambulate the premises previous to going to bed, to ascertain that all fires are safe and lights extinguished.

559. SHOULD A FIRE BREAK OUT in a chimney, a wetted blanket should be nailed to the upper ends of the mantel piece, so as to cover the opening entirely, when the fire will go out of itself. (See 524.)

560. ALL FLANNELS should be soaked before they are made up, first in cold then in hot water, in order to shrink them.

561. WORSTED AND LAMBS'-WOOL STOCKINGS should never be mended with worsted or lambs'-wool, because the latter being new it shrinks more than the stockings, and draws them up till the toes become short and

narrow, and the heels have no shape left.

562. PRESERVED GINGER is made by scalding the young roots till they become tender, then peeling them in cold water, frequently changing the water; and after this they are put into a thin syrup, from which, in a few days, they are removed to the jars, and a rich syrup poured over them.

563. WHEN MUCH PASTRY IS MADE in a house, a good quantity of fine flour should be kept on hand, in dry jars, and quite secured from the air, as it makes lighter pastry and bread when kept a short time, than when quite fresh ground.

564. TO SOFTEN HARD WATER, or purify river water, simply boil it, and then leave it to atmospheric exposure.

565. WHERE PAINTED WAINSCOT, or other wood-work requires cleaning, fuller's earth will be found cheap and useful; and, on wood not painted, it forms an excellent substitute for soap.

566. TO DESTROY FLIES in a room, take half a tea-spoonful of black pepper in powder, one tea-spoonful of brown sugar, and one table-spoonful of cream, mix them well together, and place them in the room on a plate, where the flies are troublesome, and they will soon disappear.

567. WHERE A CHIMNEY SMOKEs only when a fire is first lighted, it may be guarded against by allowing the fire to kindle gradually.

568. WHENEVER OIL IS USED for the purpose of artificial light, it should be kept free from all exposure to atmospheric air; as it is apt to absorb considerable quantities of oxygen. If oil is very coarse or tenacious, a very small quantity of oil of turpentine may be added.

569. FAMILY CLOCKS ought only to be oiled with the very purest oil, purified by a quart of lime-water to a gallon of oil, in which it has been well shaken, and suffered to stand for three or four days, when it may be drawn off.

570. **TO HEAT A BED** at a moment's notice, throw a little salt into the warming-pan and suffer it to burn for a minute previous to use.

571. **TO ASCERTAIN WHETHER A BED BE AIRED.**—Introduce a glass goblet between the sheets for a minute or two, just when the warming-pan is taken out; if the bed be dry, there will only be a slight cloudy appearance on the glass, but if not, the damp of the bed will assume the more formidable appearance of drops, the warning of danger.

572. **FLOWERS** and shrubs should be excluded from a bed-chamber.

573. **WATER** of every kind, except rain water, will speedily cover the inside of a tea-kettle with an unpleasant crust; this may easily be guarded against by placing a clean oyster-shell in the tea-kettle, which will always keep in good order, by attracting the particles of earth or of stone.

574. **IN PREPARING TEA** a good economist will be careful to have the best water, that is, the softest and least impregnated with foreign mixture; for if tea be infused in hard and in soft water, the latter will always yield the greatest quantity of the tanning matter, and will strike the deepest black, with sulphate of iron in solution.

575. **IN MAKING COFFEE**, observe that the broader the bottom and the smaller the top of the vessel, the better it will be.

576. **TO DRIVE AWAY MOTHS** from clothes, wrap up some yellow or turpentine soap in paper; or place an open bottle containing spirits of turpentine in the wardrobe.

577. **THE WHITE OF AN EGG**, well beaten with quicklime, and a small quantity of very old cheese, forms an excellent substitute for cement, when wanted in a hurry, either for broken china or old ornamental glass ware.

578. **COOKS** should be cautioned against the use of charcoal in any quantity, except where there is a free current of air; for charcoal is highly prejudicial in a state of ignition, although it may

be rendered even actively beneficial when boiled, as a small quantity of it, if boiled with meat on the turn, will effectually cure the unpleasant taint.

579. **THE HOUSEWIFE** who is anxious to dress no more meat than will suffice for the meal, should know that beef loses about one pound in four in boiling, but in roasting, loses in the proportion of one pound five ounces, and in baking about two ounces less, or one pound three ounces; mutton loses in boiling about fourteen ounces in four pounds; in roasting, one pound six ounces.

580. **THE ENGLISH**, generally speaking, are very deficient in the practice of culinary economy; a French family would live well on what is often wasted in an English kitchen: the bones, drippings, pot-liquor, remains of fish, vegetables, &c., which are too often consigned to the grease-pot or the dust-heap, might, by a very trifling degree of management on the part of the cook, or mistress of a family, be converted into sources of daily support and comfort, at least to some poor pensioner or other, at an expense that even the miser could scarcely grudge.

581. **IF YOU ARE ABOUT TO FURNISH A HOUSE**, do not spend all your money, be it much or little. Do not let the beauty of this thing, and the cheapness of that, tempt you to buy unnecessary articles. Doctor Franklin's maxim was a wise one—"Nothing is cheap that we do not want." Buy merely enough to get along with at first. It is only by experience that you can tell what will be the wants of your family. If you spend all your money, you will find you have purchased many things you do not want, and have no means left to get many things which you do want. If you have enough, and more than enough, to get everything suitable to your situation, do not think you must spend it all, merely because you happen to have it. Begin humbly. As riches increase, it is easy and pleasant to increase in comforts; but it is

always painful and inconvenient to decrease. After all, these things are viewed in their proper light by the truly judicious and respectable. Neatness, tastefulness, and good sense may be shown in the management of a small household, and the arrangement of a little furniture, as well as upon a larger scale; and these qualities are always praised, and always treated with respect and attention. The consideration which many purchase by living beyond their income, and, of course, living upon others, is not worth the trouble it costs. The glare there is about this false and wicked parade is deceptive; it does not, in fact, procure a man valuable friends, or extensive influence.

582. IF A LARDER BY ITS POSITION, will not admit of opposite windows, then a current of air must be admitted by means of a flue from the outside.

583. THE BENEFICIAL EFFECTS OF CHARCOAL in stopping putrefaction are now well ascertained; fish or meat may be restored by boiling charcoal with them. (See 320.)

584. "MORNING'S MILK" says an eminent German philosopher, "commonly yields some hundredths more cream than the evening's at the same temperature. That milked at noon furnishes the least; it would therefore be of advantage in making butter and cheese, to employ the morning's milk, and to keep the evening's for domestic use."

585. BREAD contains eighty nutritious parts in 100; meal thirty-four in 100; French beans ninety-two in 100; common beans, eighty-nine in 100; peas, ninety-three in 100; lentils, ninety-four in 100; cabbages and turnips, the most aqueous of all the vegetables compared, produce only eight pounds of solid matter in 100 pounds; carrots and spinach produce fourteen in the same quantity; whilst 100 pounds of potatoes contain twenty-five pounds of dry substance. From a general estimate it results, that one pound of good bread

is equal to two pounds and a half or three pounds of potatoes; that seventy-five pounds of bread and thirty of meat may be substituted for 300 pounds of potatoes. The other substances bear the following proportions: four parts of cabbage to one of potatoes; three parts of turnips to one of potatoes; two parts of carrots and spinach to one of potatoes; and about three parts and a half of potatoes to one of, rice, lentils, beans, French-beans, and dry peas.

586. TO TEST FLOUR, people in the trade generally knead a small quantity by way of experiment; if good, the flour immediately forms an adhesive, elastic paste, which will readily assume any form that may be given to it, without danger of breaking. Pure and unadulterated flour may likewise be easily distinguished by other methods: seize a handful briskly, and squeeze it half a minute; it preserves the form of the cavity of the hand in one piece, although it may be rudely placed on the table; not so that which contains foreign substances, it breaks in pieces more or less; that mixed with whiting being the most adhesive, but still dividing and falling down in a little time.

587. A GREAT INCREASE ON HOME-MADE BREAD, even equal to one-fifth, may be produced by using bran water for kneading the dough. The proportion is three pounds of bran for every twenty-eight pounds of flour, to be boiled for an hour, and then strained through a hair-sieve.

588. EXCELLENT PASTE for fruit or meat pies may be made with two-thirds of wheat flour, one-third of the flour of boiled potatoes, and some butter or dripping; the whole being brought to a proper consistence with warm water, and a small quantity of yeast added when lightness is desired. This will also make very pleasant cakes for breakfast, and may be made with or without spices, fruits, &c.

589. POTATOES.—There are few articles in families more subject to

waste, both in paring, boiling, and being actually thrown away, than potatoes; and there are few oaks but what boil twice as many potatoes every day as are wanted, and fewer still that do not throw the residue away, as totally unfit in any shape for the next day's meal; yet if they would take the trouble to heat up the despised cold potatoes with an equal quantity of flour, they would find them produce a much lighter dumpling or pudding than they can make with flour alone; and by the aid of a few spoonfuls of good gravy, they will provide a cheap and agreeable appendage to the dinner-table. (See 122.)

590. BOILING.—This most simple of culinary processes is not often performed in perfection; it does not require quite so much nicety and attendance as roasting; to skim your pot well, and keep it really boiling (the slower the better) all the while—to know how long is required for doing the joint, &c., and to take it up at the critical moment when it is done enough—comprehends almost the whole art and mystery. This, however, demands a patient and perpetual vigilance, of which few persons are, unhappily, capable. The cook must take especial care that the water really boils all the while she is cooking, or she will be deceived in the time; and make up a sufficient fire (a frugal cook will manage with much less fire for boiling than she uses for roasting) at first, to last all the time, without much mending or stirring, and thereby save much trouble. When the pot is coming to a boil, there will always, from the cleanest meat and clearest water, rise a scum to the top of it; proceeding partly from the foulness of the meat, and partly from the water: this must be carefully taken off, as soon as it rises. On this depends the good appearance of all boiled things, an essential matter. When you have skimmed well, put in some cold water, which will throw up the rest of the scum. The oftener it is skimmed, and the cleaner the top of the water is kept,

the clearer will be the meat. If let alone, it soon boils down and sticks to the meat; which, instead of looking delicately white and nice, will have that coarse and filthy appearance we have too often to complain of, and the butcher and poulterer be blamed for the carelessness of the cook in not skimming her pot with due diligence. Many put in milk, to make what they boil look white, but this does more harm than good: others wrap it up in a cloth; but these are needless precautions; if the scum be attentively removed, meat will have a much more delicate colour and finer flavour than it has when muffled up. This may give rather more trouble—but those who wish to excel in their art, must only consider how the processes of it can be most perfectly performed: a cook who has a proper pride and pleasure in her business, will make this her maxim and rule on all occasions. Put your meat into cold water, in the proportion of about a quart of water to a pound of meat; it should be covered with water during the whole of the process of boiling, but not drowned in it; the less water, provided the meat be covered with it, the more savoury will be the meat, and the better will be the broth in every respect. The water should be heated gradually, according to the thickness, &c., of the article boiled; for instance, a leg of mutton of ten pounds weight should be placed over a moderate fire, which will gradually make the water hot, without causing it to boil for about forty minutes; if the water boils much sooner, the meat will be hardened, and shrink up as if it was scorched—by keeping the water a certain time heating without boiling, its fibres are dilated, and it yields a quantity of scum, which must be taken off as soon as it rises, for the reasons already mentioned. "If a vessel containing water be placed over a steady fire, the water will grow continually hotter, till it reaches the limit of boiling; after which, the regular accessions of heat are wholly spent in converting

it into steam; the water remains at the same pitch of temperature, however fiercely it boils. The only difference is, that with a strong fire it sooner comes to boil, and more quickly boils away, and is converted into steam." Such are the opinions stated by Buchanan in his "Economy of Fuel." There was placed a thermometer in water in that state which cooks call gentle simmering—the heat was  $212^{\circ}$ , i. e., the same degree as the strongest boiling. Two mutton chops were covered with cold water, and one boiled fiercely, and the other simmered gently, for three-quarters of an hour; the flavour of the chop which was simmered was decidedly superior to that which was boiled; the liquor which boiled fast, was in like proportion more savoury, and, when cold, had much more fat on its surface; this explains why quick boiling renders meat hard, &c.—because its juices are extracted in a greater degree. (See 239).

591. RECKON THE TIME for its first coming to a boil. The old rule of fifteen minutes to a pound of meat, we think rather too little; the slower it boils, the tenderer, the plumper, and whiter it will be. For those who choose their food thoroughly cooked (which all will who have any regard for their stomachs), twenty minutes to a pound will not be found too much for gentle simmering by the side of the fire; allowing more or less time, according to the thickness of the joint, and the coldness of the weather; always remembering, the slower it boils the better. Without some practice it is difficult to teach any art; and cooks seem to suppose they must be right, if they put meat into a pot, and set it over the fire for a certain time—making no allowance, whether it simmers without a bubble, or boils a gallop.

592. FRESH KILLED MEAT will take much longer time boiling than that which has been kept till it is what the butchers call ripe, and longer in cold than in warm weather; if it be frozen, it must be thawed before boiling as before roasting; if it be fresh killed, it

will be tough and hard, if you stew it ever so long, and ever so gently. In cold weather, the night before you dress it, bring it into a place of which the temperature is not less than forty-five degrees of Fahrenheit's thermometer. The size of the boiling pots should be adapted to what they are to contain; the larger the saucepan the more room it takes upon the fire; and a larger quantity of water requires a proportionate increase of fire to boil it. In small families, we recommend block tin saucepans, &c., as lightest and safest; if proper care is taken of them, and they are well dried after they are cleansed, they are by far the cheapest; the purchase of a new tin saucepan being little more than the expense of tinning a copper one. Take care that the covers of your boiling pots fit close, not only to prevent unnecessary evaporation of the water, but that the smoke may not insinuate itself under the edge of the lid, and give the meat a bad taste.

593. IF YOU LET MEAT OR POULTRY REMAIN IN THE WATER after it is done enough, it will become sodden and lose its flavour.

594. BEEF AND MUTTON a little underdone (especially very large joints, which will make the better hash or broil) is not a great fault—by some people it is preferred; but lamb, pork, and veal, are uneatable if not thoroughly boiled—but do not overdo them. A trivet, or fish-drainer, put on the bottom of the boiling pot, raising the contents about an inch and a-half from the bottom, will prevent that side of the meat which comes next the bottom from being done too much—and the lower part of the meat will be as delicately done as the other part; and this will enable you to take out the contents of the pot without sticking a fork, &c., into it. If you have not a trivet, use four skewers, or a soup-plate laid the wrong side upwards.

\*595. TAKE CARE OF THE LIQUOR you have boiled poultry or meat in; in five minutes you may make it into soup.

596. **THE GOOD HOUSEWIFE** never boils a joint without converting the broth into some sort of soup.

597. **IF THE LIQUOR BE TOO SALT**, only use half the quantity, and the rest water; wash salted meat well with cold water before you put it into the boiler.

598. **ROASTING.—BEEF.**—The noble sirloin of about fifteen pounds (if much thicker the outside will be done too much before the inside is enough), will require to be before the fire about three and a-half or four hours. Take care to spit it evenly, that it may not be heavier on one side than the other; put a little clean dripping into the dripping-pan (tie a sheet of paper over it to preserve the fat), baste it well as soon as it is put down, and every quarter-of-an-hour all the time it is roasting, till the last half-hour; then take off the paper and make some gravy for it, stir the fire and make it clear; to brown and froth it, sprinkle a little salt over it, baste it with butter, and dredge it with flour; let it go a few minutes longer, till the froth rises, take it up, put it on the dish, &c. Garnish it with hidlocks of horse-radish, scraped as fine as possible with a very sharp knife.

599. **A YORKSHIRE PUDDING** is an excellent accompaniment.

600. **RIBS OF BEEF.**—The three first ribs, of fifteen or twenty pounds, will take three hours, or three and a-half: the fourth and fifth ribs will take as long, managed in the same way as the sirloin. Paper the fat and the thin part, or it will be done too much, before the thick part is done enough.

601. **RIBS OF BEEF BONED AND ROLLED.**—When you have kept two or three ribs of beef till quite tender, take out the bones, and skewer it as round as possible (like a fillet of veal); before they roll it, some cooks egg it, and sprinkle it with veal stuffing. As the meat is more in a solid mass, it will require more time at the fire than in the preceding receipt: a piece of ten or twelve pounds weight will not be well

and thoroughly roasted in less than four and a half or five hours. For the first half-hour it should not be less than twelve inches from the fire, that it may get gradually warm to the centre; the last half-hour before it will be finished, sprinkle a little salt over it, and if you wish to froth it, flour it, &c.

602. **MUTTON.**—As beef requires a large sound fire, mutton must have a brisk and sharp one; if you wish to have mutton tender it should be hung as long as it will keep, and then good eight-tooth, i. e. four years' old mutton, is as good eating as venison.

603. **THE LEG, HAUNCH, AND SADDLE**, will be the better for being hung up in a cool airy place for four or five days at least; in temperate weather a week; in cold weather, ten days. A leg of eight pounds will take about two hours; let it be well basted.

604. **A CHINE OR SADDLE**—i. e., the two loins, of ten or eleven pounds—two hours and a half. It is the business of the butcher to take off the skin and skewer it on again, to defend the meat from extreme heat, and preserve its succulence. If this is neglected, tie a sheet of paper over it; baste the strings you tie it on with directly, or they will burn. About a quarter of an hour before you think it will be done, take off the skin or paper, that it may get a pale brown colour, and then baste it, and flour it lightly to froth it.

605. **A SHOULDER**, of seven pounds, an hour and a half. Put the spit in close to the shank-bone, and run it along the blade-bone.

606. **A LOIN OF MUTTON**, from an hour and a half to an hour and three-quarters. The most elegant way of carving this is to cut it lengthwise, as you do a saddle. A neck about the same time as a loin. It must be carefully jointed, or it is very difficult to carve.

607. **THE NECK AND BREAST** are, in small families, commonly roasted together. The cook will then crack the bones across the middle before they

are put down to roast. If this is not done carefully they are very troublesome to carve. A breast, an hour and a quarter.

608. A **HAUNCH**—i. e., the leg and part of the loin of mutton. Send up two sauce-boats with it; one of rich drawn mutton gravy, made without spice or herbs, and the other of sweet sauce. It generally weighs about fifteen pounds, and requires about three hours and a half to roast it.

609. **MUTTON** (venison fashion).—Take a neck of good four or five-year-old South-down wether mutton, cut long in the bones; let it hang, in temperate weather, at least a week. Two days before you dress it, take allspice and black pepper, ground and pounded fine, a quarter of an ounce each, rub them together, and then rub your mutton well with this mixture twice a day. When you dress it, wash off the spice with warm water, and roast it in paste.

610. **VEAL** requires particular care to roast it a nice brown: Let the fire be the same as for beef; a sound large fire for a large joint, and a brisker for a smaller: put it at some distance from the fire to soak thoroughly, and then draw it nearer to finish it brown. When first laid down it is to be basted; baste it again occasionally. When the veal is on the dish pour over it half-a-pint of melted butter: if you have a little brown gravy by you, add that to the butter. With those joints which are not stuffed, send up forcemeat in balls, or rolled into sausages, as garnish to the dish, or fried pork sausages: bacon and greens are always expected with veal.

611. **FILLET OF VEAL** of from twelve to sixteen pounds, will require from four to five hours at a good fire; make some stuffing or forcemeat, and put it under the flap, that there may be some left to eat cold, or to season a hash: brown it, and pour good melted butter over it. Garnish with thin slices of lemon, and cakes or balls of stuffing, or duck stuffing, or fried pork sausages, curry sauce, bacon and greens, &c.

612. A **LOIN** is the best part of the calf, and will take about three hours roasting. Paper the kidney fat, and the back: some cooks send it up on a toast, which is eaten with the kidney and the fat of this part, which is more delicate than any marrow, &c. If there is more of it than you think will be eaten with the veal, before you roast it cut it out, it will make an excellent suet pudding: take care to have your fire long enough to brown the ends. (See 239).

613. A **SHOULDER OF VEAL** from three hours to three hours and a half: stuff it with the forcemeat ordered for the fillet of veal, in the under side.

614. **NECK**, best end, will take two hours. The scrap part is best made into a pie or broth. Breast, from an hour and a half to two hours. Let the caul remain till it is almost done, then take it off, to brown it; baste, flour, and froth it.

615. **VEAL SWEETBREAD**.—Trim a fine sweetbread, it cannot be too fresh; parboil it for five minutes, and throw it into a basin of cold water; roast it plain, or beat up the yolk of an egg, and prepare some fine bread crumbs. When the sweetbread is cold, dry it thoroughly in a cloth, run a lark spit or a skewer through it, and tie it on the ordinary spit; egg it with a paste brush, powder it well with bread crumbs, and roast it. For sauce, fried bread crumbs round it, and melted butter with a little mushroom catsup and lemon juice, or serve them on buttered toast, garnished with egg sauce, or with gravy.

616. **LAMB** is a delicate, and commonly considered tender meat, but those who talk of tender lamb, while they are thinking of the age of the animal, forget that even a chicken must be kept a proper time after it has been killed, or it will be tough picking. Woeful experience has warned us to beware of accepting an invitation to dinner on Easter Sunday; and unless commanded by a thorough-bred gourmand, our incisors, molars, and principal viscera, have protested against the imprudence of encountering young

tough stringy mutton under the misnomer of grass-lamb. To the usual accompaniments of roasted meat, green mint sauce or a salad is commonly added; and some cooks, about five minutes before it is done, sprinkle it with a little minced parsley.

617. GRASS-LAMB is in season from Easter to Michaelmas.

618. HOUSE-LAMB from Christmas to Lady-day.

619. WHEN GREEN MINT cannot be got, mint vinegar is an acceptable substitute for it.

620. HIND-QUARTER of eight pounds will take from an hour and three-quarters to two hours; baste and froth it.

621. FORE-QUARTER of ten pounds, about two hours.

622. IT IS A PRETTY GENERAL CUSTOM, when you take off the shoulder from the ribs, to squeeze a Seville orange over them, and sprinkle them with a little pepper and salt.

623. LEG of five pounds, from an hour to an hour and a-half.

624. SHOULDER, with a quick fire, an hour.

625. RIBS, about an hour to an hour and a-quarter; joint it nicely; crack the ribs across, and bend them up to make it easy to carve.

626. LOIN, an hour and a-quarter. Neck, an hour. Breast, three-quarters of an hour.

627. PREPARATION OF VEGETABLES.—There is nothing in which the difference between an elegant and an ordinary table is more seen, than in the dressing of vegetables, more especially of greens: they may be equally as fine at first, at once placed as at another, but their look and taste are afterwards very different, entirely from the careless way in which they have been cooked. They are in greatest perfection when in greatest plenty, i.e., when in full season. By season, we do not mean those early days, that luxury in the buyers, and avarice in the sellers about London, force the various vegetables: but the time of the year in which by nature and common culture, and the mere

operation of the sun and climate, they are in most plenty and perfection.

628. POTATOES and peas are seldom worth eating before Midsummer.

629. UNRIPE VEGETABLES are as in acid and unwholesome as unripe fruits.

630. AS TO THE QUALITY OF VEGETABLES the middle size are preferred to the largest, or the smallest; they are more tender, juicy, and full of flavour, just before they are quite full grown; freshness is their chief value and excellence, and I should as soon think of roasting an animal alive, as of boiling a vegetable after it is dead. The eye easily discovers if they have been kept too long; they soon lose their beauty in all respects.

631. ROOTS, GREENS, SALADS, &c., and the various productions of the garden, when first gathered, are plump and firm, and have a fragrant freshness no art can give them again; though it will refresh them a little to put them into cold spring water for some time before they are dressed.

632. TO BOIL THEM in soft water will preserve the colour best of such as are green; if you have only hard water put to it a teaspoonful of carbonate of potash.

633. TAKE CARE TO WASH AND CLEANSE THEM thoroughly from dust, dirt, and insects,—this requires great attention—pick off all the outside leaves, trim them nicely, and if they are not quite fresh-gathered and have become flaccid, it is absolutely necessary to restore their crispness before cooking them, or they will be tough and unpleasant; lay them in a pan of clean water, with a handful of salt in it, for an hour before you dress them. Most vegetables being more or less succulent, their full proportion of fluids is necessary for their retaining that state of crispness and plumpness which they have when growing.

634. ON BRING OUT OR GATHERED, the exhalation from their surface continues, while from the open vessels of the cut surface there is often great exudation or evaporation, and thus

their natural moisture is diminished; the tender leaves become flaccid, and the thicker masses or roots lose their plumpness. This is not only less pleasant to the eye, but is a real injury to the nutritious powers of the vegetable; for in this flaccid and shrivelled state its fibres are less easily divided in chewing, and the water which exists in vegetable substances, in the form of their respective natural juices, is directly nutritious.

635. THE FIRST CARE IN THE PRESERVATION OF SUCCOLENT VEGETABLES, therefore, it is to prevent them from losing their natural moisture. They should always be boiled in a saucepan by themselves, and have plenty of water: if meat is boiled with them in the same pot, they will spoil the look and taste of each other.

636. TO HAVE VEGETABLES DELICATELY CLEAN, put on your pot, make it boil, put a little salt in and skim it perfectly clean before you put in the greens, &c., which should not be put in till the water boils briskly; the quicker they boil the greener they will be.

637. WHEN THE VEGETABLES SINK, they are generally done enough, if the water has been kept constantly boiling. Take them up immediately, or they will lose their colour and goodness. Drain the water from them thoroughly before you send them to table. This branch of cookery requires the most vigilant attention.

638. IF VEGETABLES are a minute or two too long over the fire, they lose all their beauty and flavour.

639. IF NOT THOROUGHLY BOILED TENDER, they are tremendously indigestible, and much more troublesome during their residence in the stomach than under-done meats.

640. TO PRESERVE OR GIVE COLOUR in cookery many good dishes are spoiled; but the rational epicure who makes nourishment the main end of eating, will be content to sacrifice the shadow to enjoy the substance. Once for all, take care your vegetables are fresh; for as the fishmonger often

suffers for the sins of the cook, so the cook often gets undeservedly blamed instead of the green-grocer.

641. PRESERVING FRUIT.—The grand secret of preserving is to deprive the fruit of its water of vegetation in the shortest time possible; for which purpose the fruit ought to be gathered just at the point of proper maturity. An ingenious French writer considers fruit of all kinds as having four distinct periods of maturity—the maturity of vegetation, the honeyfication, of expectation, and of election.

642. THE first of these he considers as the period when, having gone through the vegetable processes up to the ripening, it appears ready to drop spontaneously. This, however, is a period which arrives sooner in the warm climate of France than in the colder orchards of England; but its absolute presence may be ascertained by the general filling out of the rind, by the bloom, by the smell, and by the facility with which it may be plucked from the branch. But even in France, as generally practised in England, this period may be hastened, either by cutting circularly through the outer rind at the foot of the branch, so as to prevent the return of the sap, or by bending the branch to a horizontal position on an espalier, which answers the same purpose.

643. THE SECOND PERIOD, or that of honeyfication, consists in the ripeness and flavour which fruits of all kinds acquire if plucked a few days before arriving at their first maturity, and preserved under a proper degree of temperature. Apples may acquire or arrive at this second degree of maturity upon the tree, but it too often happens that the flavour of the fruit is thus lost, for fruit over ripe is always found to have parted with a portion of its flavour.

644. THE THIRD STAGE, or of expectation, as the theorist quaintly terms it, is that which is acquired by pulpy fruits, which, though sufficiently ripe to

drop off the tree are even then hard and sour. This is the case with several kinds both of apples and pears, not to mention other fruits, which always improve after keeping in the confectionery, — but with respect to the medlar and the quince this maturity of expectation is absolutely necessary.

645. THE FOURTH DEGREE of maturity, or of coction, is completely artificial, and is nothing more nor less than the change produced upon fruit by the aid of culinary heat.

646. WE have already pointed out the first object necessary in the preservation of fruit, its maturity of vegetation; and we may apply the same principle to flowers or leaves which may be gathered for use.

647. THE FLOWERS ought to be gathered a day or two before the petals are ready to drop off spontaneously on the setting of the fruit; and the leaves must be plucked before the season has begun to rob them of their vegetable juices. The degree of heat necessary for the purpose of drying must next be considered, as it differs considerably with respect to different substances.

648. FLOWERS OR AROMATIC PLANTS require the smallest increase of heat beyond the temperature of the season, provided that season be genial: something more for rinds or roots, and a greater heat for fruits; but this heat must not be carried to excess.

649. PHILOSOPHIC CONFECTIONERS may avail themselves of the thermometer; but practice forms the best guide in this case, and therefore we shall say, without speaking of degrees of Fahrenheit or Reaumur, that if the necessary heat for flowers is one, that for rinds and roots must be one and a quarter, that for fruits one and three quarters, or nearly double of what one may be above the freezing-point.

650. BATHING.—If to preserve health be to save medical expenses, without even reckoning upon time and comfort, there is no part of the house-

hold arrangement so important to the domestic economist as cheap convenience for personal ablution. For this purpose baths upon a large and expensive scale are by no means necessary; but though temporary or tin baths may be extremely useful upon pressing occasions, it will be found to be finally as cheap, and much more readily convenient, to have a permanent bath constructed, which may be done in any dwelling-house of moderate size, without interfering with other general purposes. As the object of these remarks is not to present essays, but merely useful economic hints, it is unnecessary to expatiate upon the architectural arrangement of the bath, or, more properly speaking, the bathing-place, which may be fitted up for the most retired establishment, differing in size or shape agreeable to the spare room that may be appropriated to it, and serving to exercise both the fancy and the judgment in its preparation. Nor is it particularly necessary to notice the salubrious effects resulting from the bath, beyond the two points of its being so conducive both to health and cleanliness, in keeping up a free circulation of the blood, without any violent muscular exertion, thereby really affording a saving of strength, and producing its effects without any expense either to the body or to the purse.

651. WHOEVER FITS UP A BATH in a house already built must be guided by circumstances; but it will always be proper to place it as near the kitchen fire-place as possible, because from thence it may be heated, or at least have its temperature preserved by means of hot air through tubes, or by steam prepared by the culinary fire-place, without interfering with its ordinary uses.

652. A SMALL BOILER may be erected at a very small expense, in the bath-room, where circumstances do not permit these arrangements. Whenever a bath is wanted at a short warning, to boil the water necessary will always be the shortest mode; but where it is in

general daily use, the heating the water by steam will be found the cheapest and most convenient method.

653. AS A GUIDE FOR PRACTICE, we may observe it has been proved by experiment that a bath with five feet water at the freezing point, may be raised to the temperature of blood heat, or 98 degrees, by 304 gallons of water turned into steam, at an expense of 50lbs. of Newcastle coal; but if the door be kept closed, it will not lose above four degrees of temperature in twenty-four hours, by a daily supply of 3lbs. of coal. This is upon a scale of a bath of 5,000 gallons of water.

654. WASHING. — The most important department of domestic economy naturally includes the wash-house, into which philosophy has found its way for the application of many useful principles, and much useful practice.

655. WHEN WATER IS HARD, and will not readily unite with soap, it will always be proper to boil it before use; which will be found sufficiently efficacious, if the hardness depends solely upon the impregnation of lime, in the form of what modern chemistry designates as a subcarbonate. The philosophical reason for this is, that the lime, by some secret process of nature, is united to a portion of carbonic acid, which causes it to be suspended in the water; but, in the process of boiling, the carbonic acid unites with the acquired caloric, and is carried off with it into the atmosphere. Even exposure to the atmosphere will produce this effect in a great degree upon spring water so impregnated, leaving it much fitter for lavatory purposes. In both cases the water ought to be carefully poured off from the sediment, as the neutralised lime, when freed from its extra quantity of carbonic acid, falls to the bottom by its own gravity. Boiling, however, has no effect, when the hardness of the water proceeds from lime united with the sulphuric acid, or sulphate of lime of the modern

chemistry; and it must be neutralised, or brought to its proper state, by the application of common wood ashes from the kitchen grate, or of barilla, now called soda, or the Dantzic ashes, or pearl-ash; or by the more scientific process of dropping in a solution of subcarbonate of potash. Each of these unite with the sulphuric acid, and separate it from the lime, which gravitates, as in the former case, to the bottom. Having thus philosophically explained the arcana of the washing-tub, we may offer a saving hint in order to economise the use of soap, which is, to put any quantity of pearl-ash into a large jar, covered from the dust; in a few days the alkali will become liquid, which must be diluted in double its quantity of soft water with its equal quantity of new-slacked lime. Boil it half-an-hour, frequently stirring it; adding as much more hot water, and drawing off the liquor, when the residuum may be boiled afresh, and drained, until it ceases to feel acrid to the tongue.

656. SOAP AND LABOUR MAY BE SAVED by dissolving alum and chalk in brun-water, in which the linen ought to be boiled, then well rinsed out, and exposed to the usual process of bleaching.

657. SOAP MAY BE DISUSED, or nearly so, in the getting up of muslins and chintzes, which should always be treated agreeably to the oriental manner; that is, to wash them in plain water, and then boil them in congee, or rice water: after which they ought not to be submitted to the operation of the smoothing iron, but rubbed smooth with a polished stone.

658. THE ECONOMY which must result from these processes renders their consideration important to every private family, in addition to which, we must state that the improvements in philosophy extend to the laundry as well as to the wash-house.

659. EXERCISE.—Three principal points in the manner of taking exercise are necessary to be attended to:—1. The

kind of exercise. 2. The proper time for exercise. 3. The duration of it. With respect to the kinds of exercise, the various species of it may be divided into active and passive. Among the first, which admit of being considerably diversified, may be enumerated walking, running, leaping, swimming, riding, fencing, the military exercise, different sorts of athletic games, &c. Among the latter, or passive kinds of exercise, may be comprised riding in a carriage, sailing, friction, swinging, &c.

660. THE FIRST, or active exercises, are more beneficial to youth, to the middle-aged, to the robust in general, and particularly to the corpulent and the plethoric.

661. THE SECOND, or passive kinds of exercise, on the contrary, are better calculated for children; old, dry, and emaciated persons of a delicate and debilitated constitution; and particularly to the asthmatic and consumptive.

662. THE TIME at which exercise is most proper, depends on such a variety of concurrent circumstances, that it does not admit of being regulated by any general rules, and must therefore be collected from the observations made on the effects of air, food, drink, &c.

663. WITH RESPECT TO THE DURATION OF EXERCISE, there are other particulars, relative to a greater or less degree of fatigue attending the different species, and utility of it in certain states of the mind and body, which must determine this consideration as well as the preceding.

664. THAT EXERCISE IS TO BE PREFERRED which, with a view to brace and strengthen the body, we are most accustomed to, as any unusual one may be attended with a contrary effect.

665. EXERCISE SHOULD BE BEGUN and finished gradually, never abruptly.

666. EXERCISE IN THE OPEN AIR has many advantages over that used within doors.

667. TO CONTINUE EXERCISE until a profuse perspiration or a great degree of weariness takes place, is far from being wholesome.

668. IN THE FORENOON, when the stomach is not too much distended, muscular motion is both agreeable and healthful; it strengthens digestion, and heats the body less than with a full stomach; and a good appetite after it is a proof that it has not been carried to excess.

669. BUT, at the same time, it should be understood, that it is not advisable to take violent exercise immediately before a meal, as digestion might thereby be retarded.

670. NEITHER should we sit down to a substantial dinner or supper immediately on returning from a fatiguing walk, at a time when the blood is heated, and the body in a state of perspiration from previous exertion, as the worst consequences may arise, especially where cooling dishes, salad, or a glass of cold drink is begun with.

671. EXERCISE IS ALWAYS HURTFUL AFTER MEALS, from its impeding digestion, by propelling those fluids too much towards the surface of the body which are designed for the solution of the food in the stomach.

672. CARPETS.—In buying a carpet, as in everything else, those of the best quality are cheapest in the end. As it is extremely desirable that they should look as clean as possible, avoid buying carpet that has any white in it. Even a very small portion of white interspersed through the pattern will in a short time give a dirty appearance to the whole; and certainly no carpet can be worse for use than one with a white ground.

673. A CARPET IN WHICH ALL THE COLOURS ARE LIGHT, never has a clean, bright effect, from the want of dark tints to contrast and set off the light ones.

674. FOR A SIMILAR REASON, carpets whose colours are all of what artists call middle tint (neither dark nor light), cannot fail to look dull and dingy, even when quite new.

675. THE CAPRICES OF FASHION at times bring these ill-coloured carpets

into vogue; but in apartments where elegance is desirable, they always have a bad effect.

676. FOR A CARPET TO BE REALLY BEAUTIFUL and in good taste, there should be, as in a picture, a judicious disposal of light and shadow, with a gradation of very bright and of very dark tints; some almost white, and others almost or quite black.

677. THE MOST TRULY ORNATE, rich, and elegant carpets are those where the pattern is formed by one colour only, but arranged in every variety of shade. For instance, we have seen a Brussels carpet entirely red; the pattern formed by shades or tints, varying from the deepest crimson (almost a black), to the palest pink (almost a white). Also one of green only, shaded from the darkest bottle-green, in some parts of the figure, to the lightest pea-green in others. Another, in which there was no colour but brown, in all its various gradations, some of the shades being nearly black, others of a light buff. All these carpets had much the look of rich cut velvet.

678. THE CURTAINS, SOFAS, &c., of course, were of corresponding colours, and the effect of the whole was noble and elegant.

679. CARPETS of many gaudy colours are much less in demand than formerly. Two colours only, with the dark and light shades of each, will make a very handsome carpet.

680. A VERY LIGHT BLUE GROUND, with the figure of shaded crimson or purple, looks extremely well; so does a salmon-colour or buff ground, with a deep green figure; or a light yellow ground, with a shaded blue figure.

681. IF YOU CANNOT OBTAIN A HEARTH-RUG that exactly corresponds with the carpet, get one entirely different; for a decided contrast looks better than a bad match.

682. WE HAVE SEEN VERY HANDSOME HEARTH-RUGS with a rich, black, velvet-looking ground, and the figure of shaded blue, or of various tints of yellow and orange.

683. No CARPET decidedly light-coloured throughout, has a good effect on the floor, or continues long to look clean.

684. CLEANSING OF FURNITURE. — The cleansing of furniture forms an important part of domestic economy, not only in regard to neatness, but also in point of expense.

685. THE READIEST MODE indeed consists in good manual rubbing, or the essence of elbows, as it is whimsically termed; but our finest cabinet work requires something more, where brilliancy of polish is of importance.

686. THE ITALIAN CABINET-WORK in this respect excels that of any other country. To produce this effect, the workmen first saturate the surface with olive oil, and then apply a solution of gum arabic in boiling alcohol. This mode of varnishing is equally brilliant, if not superior, to that employed by the French in their most elaborate works.

687. BUT ANOTHER MODE may be substituted, which has less the appearance of a hard varnish, and may always be applied so as to restore the pristine beauty of the furniture by a little manual labour. Heat a gallon of water, in which dissolve one pound and a-half of potash; add a pound of virgin wax, boiling the whole for half-an-hour, then suffering it to cool, when the wax will float on the surface. Put the wax into a mortar, and triturate it with a marble pestle, adding soft water to it until it forms a soft paste, which laid neatly on furniture, or even on paintings, and carefully rubbed when dry, with a woollen rag, gives a polish of great brilliancy without the harshness of the drier varnishes.

688. MARBLE CHIMNEY-PIECES may also be rubbed with it, after cleaning with diluted muriatic acid, or warm soap and vinegar; but the iron or brass work connected with them requires other processes.

689. POLISHED IRON WORK may be preserved from rust by a mixture not very expensive, consisting of equal var-

wish intimately mixed with as much olive-oil as will give it a degree of greasiness, adding thereto nearly as much spirit of turpentine as of varnish.

690. CAST-IRON WORK is best preserved by the common method of rubbing with black lead.

691. IF RUST HAS MADE ITS APPEARANCE on grates or fire-irons, apply a mixture of tripoli, with half its quantity of sulphur, intimately mingled on a marble slab, and laid on with a piece of soft leather. Or emery and oil may be applied with excellent effect; not laid on in the usual slovenly way, but with a spongy piece of the fig-tree fully saturated with the mixture. This will not only clean but polish, and render the use of whitening unnecessary.

692. BRASS ORNAMENTS, when not gilt or lackered, may be cleaned the same way, and a fine colour given to them by two simple processes.

693. The FIRST is to beat sal ammoniac into a fine powder, then to moisten it with soft water, rubbing it on the ornaments, which must be heated over charcoal, and rubbed dry with bran and whitening.

694. The SECOND is to wash the brass work with roche alum boiled in strong ley, in proportion of an ounce to a pint; when dry, it must be rubbed with fine tripoli. Either of these processes will give to brass the brilliancy of gold.

695. PRECAUTIONS IN CASE OF FIRE. — The following precautions should be impressed upon the memories of all our readers:

696. SHOULD a fire break out, send off to the nearest engine or police-station.

697. FILL BUCKETS WITH WATER, carry them as near the fire as possible, dip a mop into the water, and throw it in showers on the fire, until assistance arrives.

698. IF A FIRE IS VIOLENT, wet a blanket, and throw it on the part which is in flames.

699. SHOULD A FIRE BREAK OUT IN THE KITCHEN CHIMNEY, or any other, a blan-

ket wetted should be nailed to the upper ends of the mantel-piece, so as to cover the opening entirely, the fire will then go out of itself; for this purpose two knobs should be permanently fixed in the upper ends of the mantel-piece on which the blanket may be hitched.

700. SHOULD the bed or window-curtains be on fire, lay hold of any woollen-garment, and beat it on the flames until extinguished.

701. AVOID LEAVING DOOR OR WINDOW OPEN in the room where the fire has broken out, as the current of air increases the force of the fire.

702. SHOULD THE STAIRCASE BE BURNING so as to cut off all communications, endeavour to escape by means of a trap-door in the roof, a ladder leading to which should always be at hand.

703. AVOID HURRY AND CONFUSION; no person except a fire-policeman, friend, or neighbour, should be admitted.

704. IF A LADY'S DRESS TAKES FIRE she should endeavour to roll herself in a rug, carpet, or the first woollen garment she meets with.

705. IT IS A GOOD PRECAUTION to have always at hand a large piece of baize, to throw over a female whose dress is burning, or to be wetted and thrown over a fire that has recently broken out.

706. A SOLUTION OF PEARLASH IN WATER, thrown upon a fire, extinguishes it instantly. The proportion is a quarter of a pound, dissolved in some hot water, and then poured into a bucket of common water.

707. IT IS RECOMMENDED TO HOUSEHOLDERS to have two or three fire-buckets, and a carriage-mop with a long handle near at hand; they will be found essentially useful in case of fire.

708. ALL HOUSEHOLDERS, but particularly hotel, tavern, and innkeepers, should exercise a wise precaution by directing that the last person up should perambulate the premises previous to going to rest, to ascertain that all fires are safe and lights extinguished.

## 709. A WINTER SALAD.

Two large potatoes, passed through kitchen-sieve,

Unwonted softness to the salad give,  
Of mordent mustard add a single spoon—  
Distrust the condiment which bites so soon;  
But deem it not, thou man of herbs, a fault  
To add a double quantity of salt;  
Three times the spoon with oil of Lucca crown,

And once with vinegar procured from town.  
True flavour needs it, and your poet begs,  
The pounded yellow of two well-bolled eggs.  
Let onion atoms lurk within the bowl,  
And, scarce suspected, animate the whole;  
And lastly on the favoured compound toss  
A magic teaspoon of anchovy sauce:  
Then, though green turtle fall, though venison's tough,

And ham and turkey are not boiled enough,  
Serenely full, the epicure may say—  
"Fate cannot harm me—I have dined to-day."

710. ECONOMY.—If you have a strip of land, do not throw away soap-suds. Both ashes and soap-suds are good manure for bushes and young plants.

711. WOOLLEN CLOTHES should be washed in very hot suds, and not rinsed. Lukewarm water shrinks them.

712. Do NOT let coffee and tea stand in tin.

713. SCALD your wooden-ware often, and keep your tin-ware dry.

714. PRESERVE the backs of old letters to write upon.

715. IF YOU HAVE CHILDREN who are learning to write, buy coarse white paper by the quantity, and keep it locked up, ready to be made into writing-books. It does not cost half so much as it does to buy them at the stationers.

716. SEE THAT NOTHING IS THROWN AWAY which might have served to nourish your own family or a poorer one.

717. AS FAR AS POSSIBLE, have bits of bread eaten up before they become hard; spread those that are not eaten, and let them dry, to be pounded for puddings, or soaked for brewis.

718. BREWIS is made of crusts and dry pieces of bread, soaked a good while

in hot milk, mashed up, and eaten with salt. Above all do not let crusts accumulate in such quantities that they cannot be used. With proper care, there is no need of losing a particle of bread.

719. ALL THE MENDING in the house should be done once a week if possible.

720. NEVER PUT OUT SEWING. If it be not possible to do it in your own family, hire some one into the house, and work with them.

721. A WARMING-PAN full of coals, or a shovel of coals, held over varnished furniture, will take out white spots. Care should be taken not to hold the clothes near enough to scorch; and the place should be rubbed with a flannel while warm.

722. SAL-VOLATILE or hartshorn will restore colours taken out by acid. It may be dropped upon any garment without doing harm.

723. NEW IRON should be very gradually heated at first. After it has become inured to the heat, it is not so likely to crack.

724. CLEAN A BRASS KETTLE, before using it for cooking, with salt and vinegar. The oftener carpets are shaken, the longer they wear; the dirt that collects under them grinds out the threads.

725. LINEN RAGS should be carefully saved, for they are extremely useful in sickness. If they have become dirty and worn by cleaning silver, &c., wash them and scrape them into lint.

726. IF YOU ARE TROUBLED TO GET SOFT WATER FOR WASHING, fill a tub or barrel half full of wood ashes, and fill it up with water, so that you may have ley whenever you want it. A gallon of strong ley, put into a great kettle of hard water, will make it as soft as rain water. Some people use pearlash, or potash; but this costs something, and is very apt to injure the texture of the cloth.

727. Do NOT LET KNIVES be dropped into hot dish-water. It is a good plan to have a large tin pot to wash them in,

just high enough to wash the blades *without wetting the handles.*

728. IT IS BETTER to accomplish perfectly a *very small* amount of work, than to half do ten times as much.

729. CHARCOAL POWDER will be found a *very good* thing to give knives a first-rate polish.

730. A BONNET AND TRIMMINGS may be worn a much longer time, if the dust be brushed well off after walking.

731. MUCH KNOWLEDGE may be obtained by the good housewife observing how things are managed in well-regulated families.

732. APPLES intended for dumplings should not have the core taken out of them, as the pips impart a delicious flavour to the dumpling.

733. A RICE PUDDING is most excellent without either eggs or sugar, if baked gently; it keeps better without eggs.

734. "WILFUL WASTE MAKES WOFUL WANT."—Do not cook a fresh joint whilst any of the last remains uneaten—hash it up, and with gravy and a little management eke out another day's dinner.

735. THE SHANKS OF MUTTON make a good stock for nearly any kind of gravy—and they are very cheap—a dozen may be had for a penny, enough to make a quart of delicious soup.

736. THICK CURTAINS, closely drawn around the bed, are very injurious, because they not only confine the effluvia thrown off from our bodies whilst in bed, but interrupt the current of pure air.

737. REGULARITY in the payment of accounts is essential to housekeeping. All tradesmen's bills should be paid weekly, for then any errors can be detected whilst the transactions are fresh in the memory.

738. ALLOWING CHILDREN TO TALK incessantly is a mistaken intelligence; we do not mean to say that they should be restricted from talking in proper seasons, but they should be learnt to know when it would be proper for them to *cease.*

739. RULES OF THE GAME OF DRAUGHTS.—The nine laws for regulating the game of draughts are as follows:—

740. Each player takes the first move alternately, whether the last game be won or drawn.

741. Any action which prevents the adversary from having a full view of the men is not allowed.

742. The player who touches a man must play him.

743. In case of standing the huff, which means omitting to take a man when an opportunity for so doing occurred, the other party may either take the man, or insist upon his man, which has been so omitted by his adversary, being taken.

744. If either party, when it is his turn to move, hesitate above three minutes, the other may call upon him to play; and if, after that, he delay above five minutes longer, then he loses the game.

745. In the losing game, the player can insist upon his adversary taking all the men, in case opportunities should present themselves for their being so taken.

746. To prevent unnecessary delay, if one colour have no pieces, but two kings on the board, and the other no piece but one king, the latter can call upon the former to win the game in twenty moves; if he does not finish it within that number of moves, the game to be relinquished as drawn.

747. If there are three kings to two on the board, the subsequent moves are not to exceed forty.

748. SEA PIE.—Make a thick pudding crust, line a dish with it, or what is better, a cake tin, put a layer of sliced onions, then a layer of salt beef cut in slices, a layer of sliced potatoes, a layer of pork, and another of onions, strew pepper over all, cover with a crust, and tie down tightly with a cloth previously dipped in boiling water and floured. Boil for two hours, and serve hot in a dish.

# 749. THE YOUNG LADY'S TOILETTE.

750. *Self-Knowledge—The Enchanting Mirror.*  
This curious glass will bring your faults to light,  
And make your virtues shine both strong and bright.

751. *Contentment—Wash to smooth Wrinkles.*  
A daily portion of this essence use,  
'Twill smooth the brow, and tranquillity infuse.

752. *Truth—Fine Lip-salve.*  
Use daily for your lips this precious dye,  
They'll redden, and breathe the sweet melody.

753. *Prayer—Mixture, giving Sweetness to the Voice.*  
At morning, noon, and night, this mixture take,  
Your tones improved, will richer music make.

754. *Compassion—Best Eye-water.*  
These drops will add great lustre to the eye;  
When more you need, the poor will you supply.

755. *Wisdom—Solutions to prevent Eruptions.*  
It calms the temper, beautifies the face,  
And gives to woman dignity and grace.

756. *Attention and Obedience—Matchless Pair of Ear-rings.*  
With these clear drops appended to the ear,  
Attentive lessons you will gladly hear.

757. *Neatness and Industry—Indispensable Pair of Bracelets.*  
Clasp them on carefully each day you live,  
To good designs they efficacy give.

758. *Patience—An Elastic Girdle.*  
The more you use the brighter it will grow,  
Though its least merit is external show.

759. *Principle—Ring of Tried Gold.*  
Yield not this golden bracelet while you live,  
'Twill sin restrain and peace of conscience give.

760. *Resignation—Necklace of Purest Pearl.*  
This ornament embellishes the fair,  
And teaches all the ills of life to bear.

761. *Love—Diamond Breast-pin.*  
Adorn your bosom with this precious pin,  
It shines without, and warms the heart within.

762. *Politeness—A Graceful Bandeau.*  
The forehead neatly circled with this band,  
Will admiration and respect command.

763. *Pity—A Precious Diadem.*  
Whoe'er this precious diadem shall own,  
Secures herself an everlasting crown.

764. *Good Temper—Universal Beautifier.*  
With this choice liquid gently touch the mouth,  
It spreads o'er all the face the charms of youth.

765. **CAMP COOKERY.**—The following seven receipts are from our personal friend, A. Sayer, forwarded from the Barrack Hospital, at Scutari:—

766. **STEWED SALT BEEF AND PORK A LA OMAR PASHA.**—Put into a canteen saucepan about 2lb. of well soaked beef, cut in eight pieces; half-pound of salt pork, divided in two, and also soaked; half-pound of rice, or six tablespoonfuls; quarter-of-a-pound of onions, or four middle-sized ones, peeled and sliced; two ounces of brown sugar, or one large tablespoonful; a quarter of an ounce of pepper, and five pints of water; simmer gently for three hours, remove the fat from the top and serve. The first time I made the above was in Sir John Campbell's camp kitchen, situated on the top of his rocky cavern, facing Sebastopol, near Cathcart's-hill, and among the distinguished pupils I had upon the occasion were Colonel Wyndham, Sir John Campbell, and Dr. Hall, Inspector-General of the army in the Crimea, and other officers. This dish was much approved at dinner, and is enough for six people, and, if the receipt be closely followed, you cannot fail to have an excellent food. The London salt meat will require only a four hours' soaking, having been only lightly pickled.

767. **MUTTON SOUP.**—Put the rations of six into a pan ( $\frac{1}{2}$ lb. of mutton will make a pint of good family soup), 6lb. of mutton, cut in four or six pieces;  $\frac{1}{2}$ lb. of mixed vegetables, or 8oz. of preserved, as compressed vegetables are daily given to the troops;  $\frac{3}{4}$  teaspoonful of salt; 1 teaspoonful of sugar, and  $\frac{1}{2}$  teaspoonful of pepper, if handy; 6oz. of barley or rice, or 5 tablespoonful of either; 8 pints of water; let it simmer gently for three hours and a-half, remove the fat, and serve. Bread and biscuit may be added in small quantities.

**768. PLAIN PEA SOUP.**—Put in a pan 6lb. of pork, well soaked and cut into eight pieces; pour six quarts of water over; 1lb. of split peas; 1 teaspoonful of sugar;  $\frac{1}{2}$  teaspoonful of pepper; 4oz. of fresh vegetables, or 2oz. of preserved, if handy; let it boil gently for two hours, or until the peas are tender. When the pork is rather fat, as is generally the case, wash it only;  $\frac{1}{2}$ lb. of broken biscuit may be used for the soup. Salt beef, when rather fat and soaked, may be used for pea-soup.

**769. FRENCH BEEF SOUP, OR POT-AU-FEU (CAMP FASHION).**—Put in the kettle six pounds of beef, cut into two or three pieces, bone included; one pound of mixed green vegetables, or half-a-pound of preserved, in cakes; four teaspoonful of salt; if handy, one teaspoonful of pepper, one of sugar, and three cloves; and eight pints of water. Let it boil gently three hours; remove some of the fat, and serve. The addition of a pound and a-half of bread, cut into slices, or one pound of broken biscuits, well soaked, will make a very nutritious soup. Skimming is not required.

The three above receipts are applicable to hospitals.

**770. HOW TO STEW FRESH BEEF, PORK, MUTTON, AND VEAL.**—Cut or chop two pounds of fresh beef into ten or twelve pieces; put these into a saucepan with one and a half teaspoonful of salt, one teaspoonful of sugar, half a teaspoonful of pepper, two middle-sized onions sliced, half-a-pint of water. Set on the fire for ten minutes until forming a thick gravy. Add a good tablespoonful of flour, stir on the fire a few minutes; add a quart and a half of water; let the whole simmer until the meat is tender. Beef will take from two hours and a half to three hours; mutton and pork, about two hours; veal, one hour and a quarter to one hour and a half; onions, sugar, and pepper, if not to be had, must be omitted; it will even then make a good dish; half-a-pound of sliced potatoes or two ounces of preserved potatoes; ration vegetables may be added, also a small dumpling.

**771.—PLAIN BOILED BEEF.**—For six rations, put in a saucepan 6lb. of well-soaked beef, cut in two, with three quarts of cold water; simmer gently three hours, and serve. About a pound of either carrots, turnips, parsnips, greens or cabbages, or dumplings may be boiled with it.

**772. COSSACK'S PLUMPUDDING.**—Put into a basin 1lb. of flour,  $\frac{1}{2}$ lb. of raisins (stoned, if time be allowed),  $\frac{1}{2}$ lb. of the fat of salt pork (well washed, cut into small dice, or chopped), two tablespoonfuls of sugar or treacle; and a half pint of water; mix all together; put into a cloth tied tightly; boil for four hours, and serve. If time will not admit, boil only two hours, though four are preferable. How to spoil the above:—Add anything to it.

**773. EARLY RISING.**—The difference between rising every morning at six and at eight, in the course of forty years, amounts to 29,200 hours, or three years one hundred and twenty-one days and sixteen hours, which are equal to eight hours a day for exactly ten years. So that rising at six will be the same as if ten years of life (a weighty consideration) were added, wherein we may command eight hours every day for the cultivation of our minds and the despatch of business.

**774. COMPOSITION.**—If you would write to any purpose, you must be perfectly free from without, in the first place, and yet more free from within. Give yourself the natural rein; think on no pattern, no patron, no paper, no press, no public; think on nothing, but follow your own impulses. Give yourself as you are, what you are, and how you see it. Every man sees with his own eyes, or does not see at all. This is incontrovertibly true. Bring out what you have. If you have nothing, be an honest beggar rather than a respectable thief. Great care and attention should be devoted to epistolary correspondence; as nothing exhibits want of taste and judgment so much as a

slovenly letter. Since the establishment of the penny postage it is recognised as a rule that all letters should be prepaid; indeed, many persons make a point of never taking in an unpaid letter. The following hints may be worthy of attention:—

775. ALWAYS PUT A STAMP on your envelope at the top of the right hand corner.

776. LET THE DIRECTION be written very plain; this will save the postman trouble, and facilitate business by preventing mistakes.

777. AT THE HEAD OF YOUR LETTER, in the right-hand corner, put your address in full, with the day of the month underneath; do not omit this, though you may be writing to your most intimate friend three or four times a day.

778. WHAT YOU HAVE TO SAY IN YOUR LETTER, say as plainly as possible, as if you were speaking: this is the best rule; do not revert three or four times to one circumstance, but finish up as you go on.

779. LET YOUR SIGNATURE be written as plainly as possible, (many mistakes will be avoided, especially in writing to strangers) and without any flourishes, as they tend not to add in any way to the harmony of your letter. We have seen signatures that have been almost impossible to decipher, being a mere mass of strokes, without any form to indicate letters. This is done chiefly by the ignorant, and would lead one to suppose that they were ashamed of signing what they had written.

780. DO NOT CROSS YOUR LETTERS: surely paper is cheap enough now to admit of your using an extra half-sheet, in case of necessity. (This practice is chiefly prevalent amongst young ladies.)

781. IF YOU WRITE TO A STRANGER for information, or on your own business, fail not to send a stamped envelope with your address plainly written; this will not fail to procure you an answer.

782. IF YOU ARE NOT A GOOD WRITER it is advisable to use best ink, the best paper, and the best pens, as, though they may not alter the character of

your handwriting, yet they will assist to make your writing look better.

783. THE PAPER on which you write should be clean, and neatly folded.

784. THERE SHOULD NOT BE STAINS on the envelope; if otherwise, it is only an indication of your own slovenliness.

785. CARE must be taken in giving titled persons, to whom you write, their proper directions.

786. BITING THE NAILS.—This is a habit that should be immediately corrected in children, as, if persisted in for any length of time, it permanently deforms the nails. Dipping the finger-ends in some bitter tincture will generally prevent children from putting them to the mouth; but if this fails, as it sometimes will, each finger-end ought to be encased in a stall until the propensity is eradicated.

787. TO FILL A DECAYED TOOTH.—Procure a small piece of gutta serena, drop it into boiling water, then, with the thumb and finger, take off as much as you suppose will fill up the tooth nearly level, and while in this soft state press it into the tooth; then hold on that side of the mouth cold water two or three times, which will harden it.

788. TO RESTORE HAIR WHEN REMOVED BY ILL HEALTH OR AGE.—Onions rubbed frequently on the part requiring it. The stimulating powers of this vegetable are of service in restoring the tone of the skin, and assisting the capillary vessels in sending forth new hair; but it is not infallible. Should it succeed, however, the growth of these new hairs may be assisted by the oil of myrtle-berries, the repute of which, perhaps, is greater than its real efficacy. These applications are cheap and harmless, even where they do no good; a character which cannot be said of the numerous quack remedies that meet the eye in every direction.

789. BIRDS' EGGS.—In selecting eggs for a cabinet, always choose those which are newly laid; make a medium sized hole at the sharp end with a

pointed instrument; having made the hole at the sharp end, make one at the blunt, and let this last hole be as small as possible; this done, apply your mouth to the blunt end, and blow the contents through the sharp end. If the yolk will not come freely, run a pin or wire up into the egg, and stir the yoke well about; now get a cupful of water, and, immersing the sharp end of the shell into it, apply your mouth to the blunt end, and suck up some of the water into the empty shell; then put your finger and thumb upon the two holes, shake the water well within, and, after this, blow it out. The water will clear your egg of any remains of yolk, or of white, which may stay in after blowing. If one suck up of water will not suffice, make a second or third. An egg, immediately after it is produced, is very clear and fine; but by staying in the nest, and coming in contact with the feet of the bird, it soon assumes a dirty appearance. To remedy this, wash it well in soap and water, and use a nail-brush to get the dirt off. Your egg-shell is now as it ought to be, and nothing remains to be done but to prevent the thin white membrane (which is still inside) from corrupting; take a wine-glass and fill it with the solution of corrosive sublimate in alcohol, then immerse the sharp end of the egg-shell into it, keeping your finger and thumb, as you hold it, just clear of the solution; apply your mouth to the little hole at the blunt end, and suck up some of the solution into the shell; you need not be fearful of getting the liquor into your mouth, for, as soon as it rises in the shell, the cold will strike your finger and thumb, and then you cease sucking; shake the shell just as you did when the water was in it, and then blow the solution back into the glass. Your egg-shell is now beyond the reach of corruption; the membrane for ever retains its pristine whiteness, and no insect for the time to come will ever venture to prey upon it. If you wish your egg to appear extremely brilliant, give it a coat of mas-

tic varnish, put on very sparingly with a camel-hair pencil; green or blue eggs must be done with gum-arabic; the mastic varnish is apt to injure the colour.

790. PRESERVING EGGS.—The several modes recommended for preserving eggs any length of time are not always successful. The egg, to be preserved well, should be kept at a temperature so low that the air and fluids within its shell shall not be brought into a decomposing condition: and, at the same time, the air outside of its shell should be excluded, in order to prevent its action in any way upon the egg. The following mixture was patented several years ago by Mr. Jayne, of Sheffield. He alleged that by means of it he could keep eggs two years. A part of his composition is often made use of—perhaps the whole of it would be better. Put into a tub or vessel one bushel of quick-lime, two pounds of salt, half a pound of cream-of-tartar, and mix the same together, with as much water as will reduce the composition, or mixture, to that consistence that it will cause an egg put into it to swim with its top just above the liquid; then put and keep the eggs therein.

791. GOSSIPING.—If you wish to cultivate a gossiping, meddling, censorious spirit in your children, be sure when they come home from church, a visit, or any other place where you do not accompany them, to ply them with questions concerning what everybody wore, how everybody looked, and what everybody said and did; and if you find anything in this to censure, always do it in their hearing. You may rest assured, if you pursue a course of this kind, they will not return to you unladen with intelligence; and, rather than it should be uninteresting, they will by degrees learn to embellish, in such a manner as shall not fail to call forth remarks and expressions of wonder from you. You will, by this course, render the spirit of curiosity, which is so early visible in children, and which,

if rightly directed, may be made the instrument of enriching and enlarging their minds—a vehicle of mischief which shall serve only to narrow them.

792. WORDS. — Soft words soften the soul.—Angry words are fuel to the flame of wrath, and make it blaze more freely. Kind words make other people good-natured—cold words freeze people, and hot words scorch them, and bitter words make them bitter, and wrathful words make wrathful. There is such a rush of all other kinds of words in our days, that it seems desirable to give kind words a chance among them. There are vain words, and idle words, and hasty words, and spiteful words, and silly words, and empty words, and profane words, and boisterous words, and warlike words. Kind words also produce their own image on men's souls, and a beautiful image it is. They smooth, and quiet, and comfort the hearer. They shame him out of his sour, and morose, and unkind feelings. We have not yet begun to use kind words in such abundance as they ought to be used.

793. PICKLING. — Do not keep pickles in common earthen-ware, as the glazing contains lead, and combines with the vinegar. Vinegar for pickling should be sharp, though not the sharpest kind, as it injures the pickles. If you use copper, bell-metal, or brass vessels, for pickling, never allow the vinegar to cool in them, as it then is poisonous. Add a teaspoonful of alum, and a teacup of salt to each three gallons of vinegar, and tie up a bag with pepper, ginger-root, spices of all the different sorts in it, and you have vinegar prepared for any kind of pickling. Keep pickles only in wood or stone-ware. Anything that has held grease will spoil pickles. Stir pickles occasionally, and if there are soft ones take them out and scald the vinegar, and pour it hot over the pickles. Keep enough vinegar to cover them well. If it is weak, take fresh vinegar and pour on hot. Do not boil vinegar or spice above five minutes.

794. YULE CAKE. — Take one pound of fresh butter, one pound of sugar, one pound and a half of flour, two pounds of currants, a glass of brandy, one pound of sweetmeats, two ounces of sweet almonds, ten eggs, a quarter of an ounce of allspice, and a quarter of an ounce of cinnamon. Melt the butter to a cream, and put in the sugar. Stir it till quite light, adding the allspice and pounded cinnamon; in a quarter of an hour, take the yolks of the eggs, and work them two or three at a time; and the whites of the same must by this time be beaten into a strong snow, quite ready to work in. As the paste must not stand to chill the butter, or it will be heavy, work in the whites gradually, then add the orange-peel, lemon, and citron, cut in fine strips, and the currants, which must be mixed in well with the sweet almonds; then add the sifted flour and glass of brandy. Bake this cake in a tin hoop, in a hot oven, for three hours, and put twelve sheets of paper under it to keep it from burning.

795. TO WASH CHINA CRAPE SCARFS, &c.—If the fabric be good, these articles of dress can be washed as frequently as may be required, and no diminution of their beauty will be discoverable, even when the various shades of green have been employed among other colours in the patterns. In cleaning them, make a strong lather of boiling water; suffer it to cool; when cold, or nearly so, wash the scarf quickly and thoroughly, dip it immediately in cold hard water in which a little salt has been thrown (to preserve the colours), rinse, squeeze, and hang it out to dry in the open air; pin it at its extreme edge to the line, so that it may not in any part be folded together; the more rapidly it dries the clearer it will be.

#### 796. ADVICE TO YOUNG LADIES.

797. If you have blue eyes you need not languish.

798. If black eyes you need not stare.

799. If you have pretty feet there is no occasion to wear short petticoats.

800. If you are doubtful as to that point, there can be no harm in letting them be long.

801. If you have good teeth, do not laugh for the purpose of showing them.

802. If you have bad ones, do not laugh less than the occasion may justify.

803. If you have pretty hands and arms, there can be no objection to your playing on the harp if you play well.

804. If they are disposed to be clumsy, work tapestry.

805. If you have a bad voice rather speak in a low tone.

806. If you have the finest voice in the world, never speak in a high tone.

807. If you dance well, dance but seldom.

808. If you dance ill, never dance at all.

809. If you sing well, make no previous excuses.

810. If you sing indifferently, hesitate not a moment when you are asked, for few people are judges of singing, but every one is sensible of a desire to please.

811. If you would preserve beauty, rise early.

812. If you would preserve esteem, be gentle.

813. If you would obtain power, be condescending.

814. If you would live happy, endeavour to promote the happiness of others.

815. TO EXTRACT GREASE SPOTS FROM BOOKS OR PAPER.—Gently warm the greased or spotted part of the book or paper, and then press upon it pieces of blotting-paper, one after another, so as to absorb as much of the grease as possible. Have ready some fine clear essential oil of turpentine heated almost to a boiling state, warm the greased leaf a little, and then, with a soft clean brush; wet the heated turpentine both sides of the spotted part. By repeating this application, the grease

will be extracted. Lastly, with another brush, dipped in rectified spirits of wine, go over the place, and the grease will no longer appear, neither will the paper be discoloured.

816. TO PRESERVE MILK.—Provide bottles, which must be perfectly clean, sweet, and dry; draw the milk from the cow into the bottles, and as they are filled, immediately cork them well up, and fasten the corks with pack-thread or wire. Then spread a little straw at the bottom of a boiler, on which place bottles with straw between them, until the boiler contains a sufficient quantity. Fill it up with cold water; heat the water, and as soon as it begins to boil, draw the fire, and let the whole gradually cool. When quite cold, take out the bottles and pack them in saw-dust, in hampers, and stow them in the coolest part of the house. Milk preserved in this manner, and allowed to remain even eighteen months in the bottles, will be as sweet as when first milked from the cow.

817. GERMAN PASTE.—German paste for cage birds, which will be found of better quality and cheaper than what is sold in the shops.—Boil four eggs until quite hard, then throw them into cold water; remove the white, and grate or pound the yolks until quite fine, and add a pound of white peameal and a tablespoonful of olive oil. Mix the whole up together, and press the dough through a tin colander so as to form into small grains like shot. Fry them over a gentle fire, gradually stirring them until of a light brown colour, when they are fit for use.

818. FRENCH POLISH FOR BOOTS AND SHOES.—Mix together two pints of the best vinegar and one pint of soft-water; stir into it a quarter of a pound of glue, broken up, half a pound of logwood chips, a quarter of an ounce of finely powdered indigo, a quarter of an ounce of the best soft-soap, and a quarter of an ounce of isinglass. Put the mixture over the fire, and let it boil for ten minutes, or more. Then strain the liquid, and

bottle and cork it. When sold, it is fit for use. The polish should be applied with clean sponge.

812. DAMP WALLS.—The following method is recommended to prevent the effect of damp walls on paper in rooms:—Line the damp part of the wall with sheet lead, rolled very thin, and fastened up with small copper nails. It may be immediately covered with paper. The lead is not to be thicker than that which lines tea-chests.

820. TEA-MAKING.—Dr. Kitchenar recommends that all the water necessary should be poured in at once, as the second drawing is bad. When much tea is wanted, it is better to have two tea-pots instead of two drawings.

821. RICE-FLOUR CEMENT.—An excellent cement may be made from rice-flour, which is at present used for that purpose in China and Japan. It is only necessary to mix the rice-flour intimately with cold water, and gently simmer it over a fire, when it readily forms a delicate and durable cement, not only answering all the purposes of common paste, but admirably adapted for joining together vases, cards, &c., in forming the various beautiful and tasteful ornaments which afford much employment and amusement to the ladies. When made of the consistence of plaster clay, models, busts, bas-reliefs, &c., may be formed of it, and the articles, when dry, are susceptible of high polish, and very durable.

822. RULES OF CONDUCT.—We cannot do better than quote the valuable injunctions of that excellent woman, Mrs. Fry, who combined in her character and conduct all that is truly excellent in woman:—1. I never lose any time; I do not think that lost which is spent in amusement or recreation some time every day; but always be in the habit of being employed. 2. Never err the least in truth. 3. Never say an ill thing of a person when thou canst say a good thing of him; not only speak charitably, but feel so. 4. Never be irritable or unkind to anybody. 5.

Never indulge thyself in luxuries that are not necessary. 6. Do all things with consideration; and, when thy path to act right is most difficult, feel confidence in that Power alone which is able to assist thee, and exert thy own powers as far as they go.

823. FOOD OF BLACKBIRDS.—The natural food of the blackbird is berries, worms, insects, shelled snails, cherries, and other similar fruit; and its artificial food, lean fresh meat, cut very small, and mixed with bread, or German paste.

824. CRAMP IN BATHING.—For the cure of the cramp when swimming, Dr. Franklin recommends a vigorous and violent shock of the part affected, by suddenly and forcibly stretching out the leg, which should be darted out of the water into the air if possible.

825. TO EXTINGUISH A FIRE IN A CHIMNEY.—Throw some powdered brimstone on the fire in the grate, or ignite some on the hob, and then put a board or something in the front of the fire-place to prevent the fumes descending into the room. The vapour of the brimstone ascending the chimney will then effectually extinguish the soot on fire. (See 524, 695.)

826. TO GET RID OF A BAD SMELL IN A ROOM NEWLY PAINTED.—Place a vessel full of lighted charcoal in the middle of the room, and throw on it two or three handfuls of juniper-berries, shut the windows, the chimney, and the door close; twenty-four hours afterwards, the room may be opened, when it will be found that the sickly unwholesome smell will be entirely gone. The smoke of the juniper berry possesses this advantage, that should anything be left in the room, such as tapestry, &c., none of it will be spoiled.

827. RICE DUMPLINGS.—Pick and wash a pound of rice, and boil it gently in two quarts of water till it becomes dry—keeping the pot well covered, and not stirring it. Then take it off the fire, and spread it out to cool on the bottom of an inverted sieve;

loosening the graine lightly with a fork, that all the moisture may evaporate. Pare a dozen pippins, or some large juicy apples, and scoop out the core, then fill up the cavity with marmalade, or with lemon and sugar. Cover every apple all over with a thick coating of the boiled rice. Tie up each in a separate cloth, and put them into a pot of cold water. They will require about an hour and a quarter after they begin to boil, perhaps longer.

828. COUGHS.—It is said that a small piece of resin dipped in the water which is placed in a vessel on a stove (not an open fireplace), will add a peculiar property to the atmosphere of the room, which will give great relief to persons troubled with a cough. The heat of the stove is sufficient to throw off the aroma of the resin, and gives the same relief that is afforded by the combustion, because the evaporation is more durable. The same resin may be used for weeks.

829. METHOD OF ASCERTAINING THE STATE OF THE LUNGS.—Persons desirous of ascertaining the true state of their lungs, are directed to draw in as much breath as they conveniently can; they are then to count as far as they are able, in a slow and audible voice, without drawing in more breath. The number of seconds they can continue counting must be carefully observed; in a consumption the time does not exceed ten, and is frequently less than six seconds; in pleurisy and pneumonia it ranges from nine to four seconds. When the lungs are in a sound condition, the time will range as high as from twenty to thirty-five seconds.

830. TO PRESERVE STEEL GOODS FROM RUST.—After bright grates have been thoroughly cleaned, they should be dusted over with unslaked lime, and thus left until wanted. All the coils of piano wires are thus sprinkled, and will keep from rust for many years. Table-knives, which are not in constant use, ought to be put in a case in which sifted quicklime is

placed, about eight inches deep. They should be plunged to the top of the blades, but the lime should not touch the handles.

831. HOW TO GET SLEEP.—How to get sleep is to many persons a matter of high importance. Nervous persons, who are troubled with wakefulness and excitability, usually have a strong tendency of blood on the brain, with cold extremities. The pressure of the blood on the brain keeps it in a stimulated or wakeful state, and the pulsations in the head are often painful. Let such rise and chafe the body and extremities with a brush or towel, or rub smartly with the hands, to promote circulation, and withdraw the excessive amount of blood from the brain, and they will fall asleep in a few moments. A cold bath, or a sponge bath and rubbing, or a good run, or a rapid walk in the open air, or going up or down stairs a few times just before retiring, will aid in equalising circulation and promoting sleep. These rules are simple and easy of application in castle or cabin, and may minister to the comfort of thousands who would freely expend money for an anodyne to promote "Nature's sweet restorer, balmy sleep!"

832. TURKISH MODE OF MAKING COFFEE.—The Turkish way of making coffee produces a very different result from that to which we are accustomed. A small conical saucer, with a long handle, and calculated to hold about two table-spoonfuls of water, is the instrument used. The fresh roasted berry is pounded, not ground, and about a dessert-spoonful is put into the minute boiler; it is then nearly filled with water, and thrust among the embers. A few seconds suffice to make it boil, and the decoction, grounds and all, is poured out into a small cup, which fits into a brass socket, much like the cup of an acorn, and holding the china cup as that does the acorn itself. The Turks seem to drink this decoction boiling, and swallow the grounds with the liquid. We allow it to remain a minute, in order to leave

the sediment at the bottom. It is always taken plain; sugar or cream would be thought to spoil it; and Europeans, after a little practice—(longer, however, than we had)—are said to prefer it to the clear infusion drunk in France. In every hut you will see these coffee-boilers suspended, and the means for pounding the roasted berry will always be found ready at hand.

### 833. HOW TO TREAT A WIFE.

—First, get a wife; secondly, be patient. You may have great trials and perplexities in your business with the world, but do not carry to your home a clouded or contracted brow. Your wife may have many trials, which, though of less magnitude, may have been as hard to bear. A kind, conciliating word, a tender look, will do wonders in chasing from her brow all clouds of gloom. You encounter your difficulties in the open air, fanned by heaven's cool breezes; but your wife is often shut in from these healthful influences, and her health fails, and her spirits lose their elasticity. But oh! bear with her; she has trials and sorrows to which you are a stranger, but which your tenderness can deprive of all their anguish. Notice kindly her little attentions and efforts to promote your comfort. Do not treat her with indifference, if you would not sear and palsy her heart, which, watered by kindness, would, to the latest day of your existence, throb with sincere and constant affection. Sometimes yield your wishes to hers. She has preferences as strong as you, and it may be just as trying to yield her choice as to you. Do you find it hard to yield sometimes? Think you it is not difficult for her to give up always? If you never yield to her wishes, there is danger that she will think you are selfish, and care only for yourself, and with such feelings she cannot love as she might. Again, show yourself manly, so that your wife can look up at you and feel that you will act nobly, and that she can confide in your judgment. (See 191 to 202.)

### 834. TO REMOVE WATER STAINS FROM BLACK CRAPE.

When a drop of water falls on a black crape veil or collar, it leaves a conspicuous white mark. To obliterate this, spread the crape on a table, (laying on it a large book or a paper-weight to keep it steady), and place underneath the stain a piece of old black silk. With a large camel's hair brush dipped in common ink, go over the stain; and then wipe off the ink with a little bit of old soft silk. It will dry immediately, and the white mark will be seen no more.

835. CLEANLINESS, it is said, has a powerful influence on the health and preservation of the body. Cleanliness, as well in our garments as in our dwellings, prevents the pernicious effects of dampness, of bad smells, and of contagious vapours arising from substances abandoned to putrefy; cleanliness keeps up a free perspiration, renews the air, refreshes the blood, and even animates and enlivens the mind. Whence we see that persons attentive to the cleanliness of their persons and their habitations, are in general more healthy, and less exposed to diseases than those who live in filth and nastiness; and it may moreover be remarked, that cleanliness brings with it, throughout every part of domestic discipline, habits of order and arrangement, which are among the first and best methods and elements of happiness.

836. FIRST-WATCH STEW.—Cut pieces of salt beef and pork into dice, put them into a stew-pan with six whole peppercorns, two blades of mace, a few cloves, a tea-spoonful of celery-seeds, and a faggot of dried sweet herbs; cover with water, and stew gently for an hour, then add fragments of carrots, turnips, parsley, or any other vegetables at hand, with two sliced onions, and some vinegar to flavour; thicken with flour or rice, remove the herbs, and pour into the dish with toasted bread, or freshly baked biscuit broken small, and serve hot. When they can be procured, a few potatoes improve it very much.

**837. SEVEN-BELL PASTY.**—Shred a pound of suet fine, cut salt pork into dice, potatoes and onions small, rub a sprig of dried sage up fine, mix with some pepper, and place in the corner of a square piece of paste, turn over the other corner, pinch up the sides, and bake in a quick oven. If any bones, &c., remain from the meat, season with pepper and sage, place them with a gill of water in a pan, and bake with the pasty; when done, strain, and pour the gravy into the centre of the pasty.

**838. DIRECTIONS FOR TAKING LEAF IMPRESSIONS.**—Hold oiled paper in the smoke of a lamp, or of pitch, until it becomes coated with the smoke; to this paper apply the leaf of which you wish an impression, having previously warmed it between your hands, that it may be pliable. Place the lower surface of the leaf upon the blackened surface of the oil paper, that the numerous veins which are so prominent on this side may receive from the paper a portion of the smoke. Lay a paper over the leaf, and then press it gently upon the smoked paper, with the fingers, or with a small roller (covered with woollen cloth, or some like soft material), so that every part of the leaf may come in contact with the sooted oil-paper. A coating of the smoke will adhere to the leaf. Then remove the leaf carefully, and place the blackened surface on a sheet of white paper, not ruled, or in a book prepared for the purpose, covering the leaf with a clean slip of paper, and pressing upon it with the fingers, or roller, as before. Thus may be obtained the impression of a leaf, showing the perfect outlines, together with an accurate exhibition of the veins which extend in every direction through it, more correctly than the finest drawing. And this process is so simple, and the materials so easily obtained, that any person, with a little practice to enable him to apply the right quantity of smoke to the oil-paper, and give the leaf a proper pressure, can prepare beautiful leaf impressions, such as a

naturalist would be proud to possess. There is another, and we think a better method of taking *leaf impressions*, than the preceding one. The only difference in the process consists in the use of *printing ink*, instead of smoked oil-paper.

**839. LEAF PRINTING.**—After warming the leaf between the hands, apply printing ink, by means of a small leather ball containing cotton, or some soft substance, or with the end of the finger. The leather ball (and the finger when used for that purpose), after the ink is applied to it, should be pressed several times on a piece of leather, or some smooth surface, before each application to the leaf, that the ink may be smoothly and evenly applied. After the under surface of the leaf has been sufficiently inked, apply it to the paper, where you wish the impression; and, after covering it with a slip of paper, use the hand or roller to press upon it, as described in the former process.

**840. PLANT SKELETONS.**—The leaves are to be put into an earthen or glass vessel, and a large quantity of rain-water to be poured over them; after this they are to be left to the open air and to the heat of the sun, without covering the vessel. When the water evaporates so as to leave the leaves dry, more must be added in its place; the leaves will by this means putrefy, but they require a different time for this: some will be finished in a month, others will require two months or longer, according to the toughness of their parenchyma. When they have been in a state of putrefaction for some time, the two membranes will begin to separate, and the green part of the leaf to become fluid: then the operation of clearing is to be performed. The leaf is to be put upon a flat white earthen plate and covered with clear water; and being gently squeezed with the finger, the membranes will begin to open, and the green substance will come out at the edges; the membranes must be carefully taken off with the finger, and

great caution must be used in separating them near the middle ribs. When once there is an opening towards this separation, the whole membrane always follows easily; when both membranes are taken off, the skeleton is finished, and it has to be washed clean with water, and then dried between the leaves of a book. Fruits are divested of their pulp and made into skeletons in a different manner. Take, for an instance, a fine large pear which is soft, and not tough; let it be gently pared without squeezing it, and without injuring either the crown or the stalk; put it into a pot of rain-water, covered, set it over the fire, and let it boil gently till perfectly soft, then take it out and lay it in a dish filled with cold water; then holding it by the stalk with one hand, rub off as much of the pulp as you can with the finger and thumb, beginning at the stalk, and rubbing it regularly towards the crown. The fibres are most tender towards the extremities, and therefore to be treated with great care there. When the pulp has thus been cleared pretty well off, the point of a fine pen-knife may be of use to pick away the pulp sticking to the core. In order to see how the operation advances, the soiled water must be thrown away from time to time, and clean poured on in its place. When the pulp is in this manner perfectly separated, the clean skeleton is to be preserved in spirits of wine. This method may be pursued with the bark of trees, which afford interesting views of their constituent fibres.

**841. ROLLS.**—Mix the salt with the flour. Make a deep hole in the middle. Stir the warm water into the yeast, and pour it into the hole in the flour. Stir it with a spoon just enough to make it stir better, and sprinkle some flour over the top. Cover the pan, and set it in a warm place for several hours. When it is light, add half a pint more of lukewarm water, and make it, with a little more flour, into a dough. Knead it very well for ten minutes. Then

divide it into small pieces, and knead each separately. Make them into round cakes or rolls. Cover them, and set them to rise about an hour and a half. Bake them, and, when done, let them remain in the oven, without the lid, for about ten minutes.

**842. EARLY RISING.**—Dr. Wilson Philip, in his "Treatise on Indigestion," says:—"Although it is of consequence to the debilitated to go early to bed, there are few things more hurtful to them than remaining in it too long. Getting up an hour or two earlier, often gives a degree of vigour which nothing else can procure. For those who are not much debilitated and sleep well, the best rule is to get out of bed soon after waking in the morning. This at first may appear too early, for the debilitated require more sleep than the healthy; but rising early will gradually prolong the sleep on the succeeding night till the quantity the patient enjoys is equal to his demand for it. Lying late is not only hurtful, by the relaxation it occasions, but also by occupying that part of the day at which exercise is most beneficial."

**843. SUPERIOR CLEANLINESS** sooner attracts our regard than even finery itself, and often gains esteem where the other fails.

**844. COFFEE A DISINFECTANT.**—Numerous experiments with roasted coffee prove that it is the most powerful means, not only of rendering animal and vegetable effluvia innocuous, but of actually destroying them. A room in which meat in an advanced degree of decomposition had been kept for some time, was instantly deprived of all smell on an open coffee-roaster being carried through it, containing a pound of coffee newly roasted. In another room, exposed to the effluvia occasioned by the clearing out of the dung-pit, so that sulphuretted hydrogen and ammonia in great quantities could be chemically detected, the stench was completely removed in half a minute, on the employment of three ounces of fresh roasted coffee, whilst the other

parts of the house were permanently cleared of the same smell by being simply traversed with the coffee-roaster, although the cleansing of the dung-pit continued for several hours after. The best mode of using the coffee as a disinfectant is to dry the raw bean, pound it in a mortar, and then roast the powder on a moderately heated iron plate, until it assumes a dark brown tint, when it is fit for use. Then sprinkle it in sinks or cess-pools, or lay it on a plate in the room which you wish to have purified. Coffee acid or coffee oil acts more readily in minute quantities. (See 320.)

845. UTILITY OF SINGING.—It is ascertained, and we believe with some truth, that singing is a corrective of the too common tendency to pulmonic complaints. Dr. Rush, an eminent physician, observes on this subject:—"The Germans are seldom afflicted with consumption; and this, I believe, is in part occasioned by the strength which their lungs acquire by exercising them in vocal music, for this constitutes an essential branch of their education. The music master of an academy has furnished me with a remark still more in favour of this opinion. He informed me that he had known several instances of persons who were strongly disposed to consumption, who were restored to health by the exercise of their lungs in singing."

846. DOMESTIC RULES.—Mrs. Hamilton, in her "Cottagers of Glenburnie," gives three simple rules for the regulation of domestic affairs, which deserve to be remembered, and which would, if carried into practice, be the means of saving time, labour, and patience, and of making every house a "well-ordered" one. They are as follows:—1. Do everything in its proper time. 2. Keep everything to its proper use. 3. Put everything in its proper place.

847. THE CHEMICAL BAROMETER.—Take a long narrow bottle, such as an old-fashioned Eau-de-Cologne bottle, and put into it two-and-a-

half drachms of camphor, and eleven drachms of spirits of wine; when the camphor is dissolved, which it will readily do by slight agitation, add the following mixture:—Take water, nine drachms; nitrate of potash (saltpetre), thirty-eight grains; and nitrate of ammonia (sal ammoniac), thirty-eight grains. Dissolve these salts in the water prior to mixing with the camphorated spirit; then shake the whole well together. Cork the bottle well, and wax the top, but afterwards make a very small aperture in the cork with a red-hot needle. The bottle may then be hung up, or placed in any stationary position. By observing the different appearances which the material assumes, as the weather changes, it becomes an excellent prognosticator of a coming storm or of a sunny sky.

848. FRUGALITY.—The great philosopher, Dr. Franklin, inspired the mouth-piece of his own eloquence, "Poor Richard," with "many a gem of purest ray serene," encased in the homely garb of proverbial truisms. On the subject of frugality we cannot do better than take the worthy Mentor for our text, and from it address our remarks. A man may, if he knows not how to save as he gets, "keep his nose all his life to the grindstone, and die not worth a groat at last. A fat kitchen makes a lean will," and

"Many estates are spent in getting,  
Since women for tea forebore spinning and knitting,  
And men for punch forsook hewing and splitting."

849. IF YOU WOULD BE WEALTHY, think of saving as well as of getting. The Indies have not made Spain rich, because her out-goes are greater than her in-comes.

850. AWAKE then with your expensive follies, and you will not then have so much cause to complain of hard times, heavy taxes, and chargeable families.

851. "WHAT maintains one vice would bring up two children."

852. You may think, perhaps, that

little tea, or superfluities now and then, diet a little more costly, clothes a little finer, and a little entertainment now and then, can be no great matter; but remember, "Many a little makes a mickle."

853. BEWARE OF LITTLE EXPENSES: "A small leak will sink a great ship," as Poor Richard says; and again, "Who dainties love, shall beggars prove;" and moreover, "Fools make feasts and wise men eat them."

854. HERE you are all got together to this sale of fineries and nick-nacks. You call them goods; but if you do not take care, they will prove evils to some of you. You expect they will be sold cheap, and, perhaps, they may for less than they cost; but if you have no occasion for them they must be dear to you.

855. REMEMBER what poor Richard says, "Buy what thou hast no need of, and ere long thou shalt sell thy necessities."

856. AND AGAIN, "At a great pennyworth, pause awhile." He means, perhaps, that the cheapness is apparent only, and not real; or the bargain, by straitening thee in thy business, may do thee more harm than good; for in another place he says, "Many have been ruined by buying good pennyworths."

857. AGAIN, "It is foolish to lay out money in the purchase of repentance;" and yet this folly is practised every day at auctions, for want of minding the almanack.

858. MANY, for the sake of shew on the back, have gone with a hungry stomach, and half starved their families. "Silks and satins, scarlets and velvets, put out the kitchen fire," as Poor Richard says. Those are not the necessities of life; they can scarcely be called the conveniencies; and yet, only because they look pretty, how many want to have them!

859. BY THESE and other extravagances, the genteel are reduced to poverty, and forced to borrow of those whom they formerly despised, but who,

through industry and frugality have maintained their standing; in which case it appears plainly, that, "A ploughman on his legs is higher than a gentleman on his knees," as Poor Richard says. Perhaps they had a small estate left them, which they knew not the getting of; they think "It is day, and will never be night;" that a little to be spent out of so much is not worth minding; but "Always taking out of the treas'db, and never putting in, soon comes to the bottom," as Poor Richard says; and then "When the well is dry, they know the worth of water."

860. BUT this they might have known before, if they had taken his advice: "If you would know the value of money, go and try to borrow some; for he that goes a borrowing goes a sorrowing," as Poor Richard says; and, indeed, so does he that lends to such people, when he goes to get it again. Poor Dick further advises.—

"Good words of dress is sure a very curse; if they you consult, consult your purse."

861. AND AGAIN, "Pride is as loud a beggar as want, and a great deal more saucy."

862. WHEN you have bought one fine thing, you must buy ten more, that your appearance may be all of a piece; but Poor Dick says, "It is easier to suppress the first desire than to satisfy all that follow it;" and it is as truly folly for the poor to ape the rich, as for the frog to swell in order to equal the ox.

"Vessels large may venture more,  
But little boats should keep near shore."

863. It is, however, a folly soon punished; for "Pride that dines on vanity, sups on contempt; pride breakfasted with plenty, dined with poverty, and supped with infamy."

864. AND, after all, of what use is this pride of appearance, for which so much is risked, so much is suffered? It cannot promote health, nor ease pain; it makes no increase of merit in the person—it creates envy, it hastens misfortune.

# 864. CONVERSATION.

865. There are many talkers, but few who know how to converse agreeably. (See 161 and 279.)

866. Speak distinctly, neither too rapidly nor too slowly.

867. Accommodate the pitch of your voice to the hearing of the person with whom you are conversing.

868. Never speak with your mouth full.

869. Tell your jokes and laugh afterwards.

870. Dispense with superfluous words—such as, "Well, I should think."

871. The woman who wishes her conversation to be agreeable will avoid conceit or affectation, and laughter, which is not natural and spontaneous. Her language will be easy and unstudied, marked by a graceful carelessness, which, at the same time, never oversteps the limits of propriety. Her lips will readily yield to a pleasant smile; she will not love to hear herself talk; her tones will bear the impress of sincerity, and her eyes sparkle with animation, as she speaks. The art of pleasing is, in truth, the very soul of good breeding; for the proper object of the latter is to render us agreeable to all with whom we associate. to make us, at the same time, esteemed and loved.

872. We need scarcely advert to the rudeness of interrupting any one who is speaking, or to the impropriety of pushing, to its full extent, a discussion which has become unpleasant.

873. Some men have a mania for Greek and Latin quotations; this is peculiarly to be avoided. It is like pulling up the stones from a tomb wherewith to kill the living. Nothing is more wearisome than pedantry.

874. If you feel your intellectual superiority to any one with whom you are conversing, do not seek to bear him down; it would be an inglorious triumph, and a breach of good manners. Beware, too, of speaking lightly of subjects which bear a sacred character.

875. Witlings occasionally gain a re-

putation in society; but nothing is more insipid and in worse taste than their conceited harangues and self-sufficient air.

876. It is a common idea that the art of writing and the art of conversation are one; this is a great mistake. A man of genius may be a very dull talker.

877. The two grand modes of making your conversation interesting, are to enliven it by recitals calculated to affect and impress your hearers, and to intersperse it with anecdotes and smart things. Bivasol was a master in the latter mode. (See 1338.)

878. CLEANLINESS.—The want of cleanliness is a fault which admits of no excuse. Where water can be had for nothing, it is surely in the power of every person to be clean.

879. THE DISCHARGE FROM OUR BODIES, by perspiration, renders frequent changes of apparel necessary.

880. CHANGE OF APPAREL greatly promotes the secretion from the skin, so necessary to health.

881. WHEN THAT MATTER which ought to be carried off by perspiration is either retained in the body, or re-absorbed by dirty clothes, it is apt to occasion fevers and other diseases.

882. MOST DISEASES OF THE SKIN proceed from want of cleanliness. These indeed may be caught by infection, but they will seldom continue long where cleanliness prevails.

883. TO THE SAME CAUSE must we impute the various kinds of vermin that infest the human body, houses, &c. These may generally be banished by cleanliness alone.

884. PERHAPS the intention of nature, in permitting such vermin to annoy mankind, is to induce them to the practice of this virtue.

885. ONE COMMON CAUSE of putrid and malignant fevers is the want of cleanliness.

886. THESE FEVERS commonly begin among the inhabitants of close dirty houses, who breathe bad air, take little

exercise, use unwholesome food, and wear dirty clothes. There the infection is generally hatched, which spreads far and wide to the destruction of many. Hence cleanliness may be considered as an object of the public attention.

887. It is not sufficient that I be clean myself, while the want of it in my neighbour affects my health as well as his own.

888. IF DIRTY PEOPLE CANNOT BE REMOVED as a common nuisance, they ought at least to be avoided as infectious. All who regard their health, should keep at a distance, even from their habitations.

889. IN PLACES where great numbers of people are collected, cleanliness becomes of the utmost importance.

890. IT, AS WELL KNOWN, that infectious diseases are caused by tainted air. Everything, therefore, which tends to pollute the air, or spread the infection, ought, with the utmost care, to be avoided.

891. FOR THIS REASON, in great towns, no filth of any kind should be permitted to lie upon the streets. We are sorry to say, that the importance of general cleanliness does by no means seem to be sufficiently understood.

892. IT WERE WELL if the lower classes of the inhabitants of Britain, would imitate their neighbours the Dutch, in the cleanness of their streets, houses, &c.

893. WATER, indeed, is easily obtained in Holland; but the situation of most towns in Britain is more favourable to cleanliness.

894. NOTHING can be more agreeable to the senses, more to the honour of the inhabitants, or conducive to their health, than a clean town; nor does anything impress a stranger sooner with a disrespectful idea of any people than its opposite.

895. IT IS REMARKABLE, that, in most eastern countries, cleanliness makes a great part of their religion. The Mahometan, as well as the Jewish religion, enjoins various bathings,

washings, and purifications. No doubt these were designed to represent inward purity; but they are at the same time calculated for the preservation of health.

896. HOWEVER WHIMSICAL these washings may appear to some, few things would appear more to prevent diseases than a proper attention to many of them.

897. WERE EVERY PERSON, for example, after handling a dead body, visiting the sick, &c., to wash before he went into company, or sat down to meat, he would run less hazard either of catching the infection himself, or communicating it to others.

898. FREQUENT WASHING not only removes the filth which adheres to the skin, but likewise promotes the perspiration, braces the body, and enlivens the spirits.

899. EVEN WASHING THE FEET tends greatly to preserve health. The sweat and dirt with which these parts are frequently covered, cannot fail to obstruct their perspiration. This piece of cleanliness would often prevent colds and fevers.

900. WERE PEOPLE TO BATHE their feet and hands in warm water at night, after being exposed to cold or wet through the day, they would seldom experience any of the fatal effects which often proceed from these causes.

901. IN PLACES where great numbers of sick people are kept, cleanliness ought most religiously to be observed. The very smell in such places is often sufficient to make one sick. It is easy to imagine what effect that is likely to have upon the diseased.

902. A PERSON IN HEALTH has a greater chance to become sick, than a sick person has to get well, in an hospital or infirmary where cleanliness is neglected.

903. THE BRUTES themselves set us an example of cleanliness. Most of them seem uneasy, and thrive ill, if they be not kept clean. A horse that is kept thoroughly clean, will thrive better on a smaller quantity of food, than

with a greater, where cleanliness is neglected.

904. *EVEN OUR OWN FEELINGS* are a sufficient proof of the necessity of cleanliness. How refreshed, how cheerful and agreeable does one feel on being shaved, washed, and dressed; especially when these have been long neglected.

905. *MOST PEOPLE* esteem cleanliness; and even those who do not practise it themselves, often admire it in others.

#### 906. DOMESTIC PHARMACOPEIA.

In compiling this part of our hints, we have endeavoured to supply that kind of information that is so often wanted in the time of need, and cannot be obtained when a medical man or a druggist is not near. The doses are all fixed for adults, unless otherwise ordered. The various remedies are arranged in sections, according to their uses, as being more easy for reference. (*For the meanings of medical terms, see INDEX.*)

#### 907.—COLLYRIA, OR EYE-WASHES.

908. *Alum.*—Dissolve half a drachm of alum in eight ounces of water. *Use*, as an astringent. When the strength of the alum is doubled, and only half the quantity of water used, it acts as a discutient.

909. *Common.*—Add one ounce of diluted acetic acid to three ounces of decoction of poppy heads. *Use*, as an anodyne wash.

910. *Compound Alum.*—Dissolve alum and white vitriol, of each one drachm in one pint of water, and filter through paper. *Use*, as an astringent wash.

911. *Zinc and Lead.*—Dissolve white vitriol and acetate of lead, of each seven grains, in four ounces of elder-flower water, then add one drachm of laudanum (tincture of opium), and the same quantity of spirit of camphor; then strain. *Use*, as a detergent wash.

912. *Acetate of Zinc.*—Dissolve half a drachm of white vitriol in five ounces of water. Dissolve two scruples of acetate of lead in five ounces of water. Mix these solutions, then set aside for a short time, and afterwards filter. *Use*,

as an astringent; this forms a most valuable collyrium.

913. *Sulphate of Zinc.*—Dissolve ten grains of white vitriol in a pint of water or rose-water. *Use*, for weak eyes.

914. *Zinc and Camphor.*—Dissolve a scruple of white vitriol in eight ounces of water, then add one drachm of spirit of camphor, and strain. *Use*, as a stimulant.

915. *Compound Zinc.*—Dissolve ten grains of white vitriol in eight ounces of camphor water (*Mistura camphoræ*), and the same quantity of decoction of poppy-heads. *Use*, as an anodyne and detergent; useful for weak eyes.

#### 916.—CONFECTIONS AND ELECTUARIES.

917. *Confections* are used as vehicles for the administration of more active medicines, and *Electuaries* are made for the purpose of rendering some remedies palatable. Both should be kept in closely covered jars.

918. *Almond Confection.*—Remove the outer coat from an ounce of sweet almonds, and beat them well in a mortar with one drachm of powdered gum arabic, and half an ounce of white sugar. *Use*, to make a demulcent mixture, known as almond emulsion.

919. *Alum Confection.*—Mix two scruples of powdered alum with four scruples of treacle. *Dose*, half a drachm. *Use*, as an astringent in sore throat and relaxed uvula, and ulcerations of the mouth.

920. *Orange Confection.*—Take one ounce of the freshly rasped rind of orange, and mix it with three ounces of white sugar, after it is well beaten. *Dose*, from one drachm to one ounce. *Use*, as a gentle stomachic and tonic, and for giving tonic powders in.

921. *Black Pepper Confection.*—Take of black pepper and elecampane-root each one ounce; fennel seeds, three ounces; honey and sugar, of each two ounces. Rub the dry ingredients to a fine powder, and when the confection is wanted, add the honey, and mix well. *Dose*, from one to two drachms. *Use* in hæmorrhoids.

and the same quantity of syrup of tolu. *Dose*, one tablespoonful every three hours. *Use*, after fevers and catarrhs.

1000. *Stomachic*.—Take twenty grains of powdered rhubarb, and dissolve it in three ounces and a half of peppermint water, then add sal volatile and compound tincture of gentian, each one drachm and a half. *Mix*. *Dose*, from one to one ounce and a half. *Use*, as a tonic, stimulant, and stomachic.

#### 1001. DRINKS.

1002. *Tamarind*.—Boil two ounces of the pulp of tamarinds in two pints of milk, then strain. *Use*, as a refrigerant drink.

1003. *Tamarind*.—Dissolve two ounces of the pulp in two pints of warm water, and allow it to get cold, then strain. *Use*, refrigerant.

#### 1004. POWDERS.

1005. *Compound Soda*.—Mix one drachm of calomel, five drachms of sesqui-carbonate of soda, and ten drachms of compound chalk powder together. *Dose*, five grains. *Use*, as a mild purgative for children during teething.

1006. *Tonic*.—Mix one drachm of powdered rhubarb with the same quantity of dried carbonate of soda, then add two drachms of powdered Calumba root. *Dose*, from ten to twenty grains as a tonic after fevers, in all cases of debility, and dyspepsia attended with acidity.

1007. *Rhubarb and Magnesia*.—Mix one drachm of powdered rhubarb with two drachms of carbonate of magnesia, and half a drachm of ginger. *Dose*, from fifteen grains to one drachm. *Use*, as a purgative for children.

1008. *Sulphur and Potash*.—Mix one drachm of sulphur with four scruples of bicarbonate of potash, and two scruples of nitre. *Dose*, from half a drachm to one drachm. *Use*, as a purgative, diuretic, and refrigerant.

1009. *Anti-Diarrhœal*.—Mix one grain of powdered ipecacuanha, and one grain of powdered opium, with the

same quantity of camphor. *Dose*, one of these powders to be given in jam, treacle, &c., five or six times a day if necessary.

1010. *Anti-Spasmodic*.—Mix four grains of subnitrate of bismuth, forty-eight grains of carbonate of magnesia, and the same quantity of white sugar, and then divide in four equal parts. *Dose*, one-fourth part. *Use*, in obstinate pain in the stomach with cramps, unattended by inflammation.

1011. *Anti-Pertussal, or against Hooping Cough*.—Mix one drachm of powdered belladonna root, and five drachms of white sugar, together. *Dose*, six grains morning and evening for children under one year; twelve grains for those under two and three years of age; twenty-four grains for those between five and ten, and forty-eight grains for adults. *Caution*, this should be prepared by a chemist, as the belladonna is a poison, and occasional doses of castor-oil should be given while it is being taken.

1012. *Purgative (common)*.—Mix ten grains of calomel, with one drachm of powdered jalap, and twenty grains of sugar. *Dose*, fifty grains for adults.

1013. *Sudorific*.—Mix six grains of compound antimonial powder, and two grains of sugar, together. *Dose*, as mixed, to be taken at bed-time. *Use*, in catarrh and fever.

#### 1014. MISCELLANEOUS.

1015. *Æthereal Tincture of Male Fern*.—Digest one ounce male fern buds in eight ounces of sulphuric ether, then strain. *Dose*, thirty drops early in the morning. *Use*, to kill tape-worm.

1016. *Emulsion, Laxative*.—Rub down an ounce of castor oil in two drachms of mucilage of gum arabic, three ounces of dill water, and add a drachm of tincture of jalap gradually. *Dose*, as prepared thus, to be taken while fasting in the morning.

1017. *Emulsion, Purgative*.—Rub down six grains of scammony with six drachms of white sugar in a mortar,

and gradually add four ounces of almond emulsion, and two drops of oil of cloves. *Dose*, as prepared, early in the morning.

1018. *To Prevent Pitting after Small-pox*.—Spread a sheet of thin leather with the ointment of ammoniacum with mercury, and cut out a place for the mouth, eyes, and nostrils. This forms what is called a mask, and, after anointing the eye-lids with a little blue ointment (*unguentum hydragryi*), it should be applied to the face, and allowed to remain for three days for the distinct kind, and four days for the running variety. *Period to apply it*:—Before the spots fill with matter, although it will answer sometimes even after they have become pustulous. It may be applied to any part in the same way.

1019. *Mucilage of Gum Arabic*.—Rub one ounce of gum arabic in a mortar, with four ounces of warm water. *Use*, for coughs, &c.

1020. *Mucilage of Starch*.—Rub one drachm of starch with a little water, and gradually add five ounces of water, then boil until it forms a mucilage. *Use*, for enemata, topical application, and demulcent. (See 1323.)

## 1021. GARDENING OPERATIONS FOR THE YEAR.

1022. JANUARY.—*Flower of the month*.—Christmas Rose.

1023. *Gardening*.—Indoor preparations for future operations must be made, as in this month there are only five hours a day available for out-door work, unless the season be unusually mild. Mat over tulip-beds, begin to force roses. Pot over pease and plant dried roots of border flowers in mild weather. Take strawberries in pots into the greenhouse. Prune and plant gooseberry, currant, fruit and deciduous trees and shrubs. Cucumbers and melons to be sown in the hot bed. Apply manure.

1024. FEBRUARY.—*Flowers of the month*.—Snowdrop and violet.

1025. *Gardening*.—Transplant pinks, carnations, sweet-williams, capsaufs,

campanulas, &c., sweet and garden peas and lettuce for succession of crops, covering the ground with straw, &c. Sow also savoy, leeks and cabbages. Prune and nail walnut trees, and towards the end of the month plant stocks for next year's grafting, also cuttings of poplar, alder, willow-trees, for ornamental shrubbery. Sow fruit and forest tree seeds.

1026. MARCH.—*Flower of the month*.—Primrose.

1027. *Gardening operations*.—“Spring flowers” to be sown. Border flowers to be planted out. Tender annuals to be potted out under glasses. Mushroom beds to be made. Sow arid-chokes, Windsor beans, and cauliflowers for autumn; lettuces and peas for succession of crops, onions, parsley, radishes, savoy, asparagus, red and white cabbages, and beets; turnips, early brocoli, parsneps and carrots. Plant slips and parted roots of perennial herbs. Graft trees and protect early blossoms. Force rose-tree cuttings under glasses.

1028. APRIL.—*Flower of the month*.—Cowslip.

1029. *Gardening Operations*.—Sow for succession peas, beans and carrots; parsneps, celery and scallots. Sow “Spring flowers.” Plant evergreens, dahlias, chrysanthemums, and the like, also potatoes, slips of thyme, parted roots, lettuces, cauliflowers, cabbages, onions. Lay down turf, remove caterpillars. Sow and graft Camellias, and propagate and graft fruit and rose trees by all the various means in use. Sow cucumbers and vegetable marrows for planting out. *This is the most important month in the year for gardening.*

1030. MAY.—*Flower of the month*.—Hawthorn.

1031. *Gardening*.—Plant out your seedling flowers as they are ready, and sow again for succession larkspur, mignonette, and other spring flowers. Pot out tender annuals. Remove anemones to a R.E. aspect. Take up bulbous roots as the leaves decay. Sow kidney beans, brocoli for spring use,

cape for autumn, cauliflowers for December; Indian corn, cress, onions, to plant out as bulbs next year, radishes, aromatic herbs, turnips, cabbages, savoys, lettuces, &c. Plant celery, lettuces, and annuals; thin spring crops. Stick peas, &c. Earth up potatoes, &c. Moistern mushroom beds.

1082. JUNE.—*Flowers of the month*.—Waterlily, Honeysuckle.

1083. *Gardening Operations*.—Sow giant stocks to flower next spring. Slip myrtles to strike, and lay pinks, carnations, roses, and evergreens. Plant annuals in borders, and auriculas in shady places. Sow kidney beans, pumpkins, cucumbers for pickling, and (late in the month) endive and lettuces. Plant out cucumbers, marrows, leeks, celery, brocoli, cauliflowers, savoys, and seedlings, and plants propagated by slips. Earth up potatoes, &c. Cut herbs for drying when in flower.

1084. JULY.—*Flowers of the Month*.—Rose and carnation.

1085. *Gardening Operations*.—Part auricula and polyanthus roots. Take up summer bulbs as they go out of flower, and plant saffron crocus and autumn bulbs. Gather seeds. Clip evergreen borders and hedges, strike myrtle slips under glasses. Net fruit trees. Finish budding by the end of the month. Head down espaliers. Sow early dwarf cabbages to plant out in October for spring; also endive, onions, kidney beans for late crop, and turnips. Plant celery, endive, lettuces, cabbages, leeks, strawberries, and cauliflowers. Stick peas. Tie up salads. Earth celery. Take up onions, &c., for drying.

1086. AUGUST.—*Flowers of the Month*.—Harebell and mallow.

1087. *Gardening Operations*.—Sow flowers to flower in-doors in winter, and pot all young stocks raised in the greenhouse. Sow early red cabbages, cauliflowers for spring and summer use, cress and cabbage lettuce for winter crop. Plant out winter crops. Dry herbs and mushroom spawn. Plant out strawberry roots, and net currant trees,

to preserve the fruit through the winter.

1088. SEPTEMBER.—*Flowers of the Month*.—Clematis, or traveller's joy, arbutus, and meadow saffron.

1089. *Gardening Operations*.—Plant crocuses, scaly bulbs, and evergreen shrubs. Propagate by layers and cuttings of all herbaceous plants, currant, gooseberry, and other fruit trees. Plant out seedling pinks. Sow onions for spring plantation, carrots, spinach, and Spanish radishes in warm spots. Earth up celery. House potatoes and edible bulbs. Gather pickling cucumbers. Make tulip and mushroom beds.

1040. OCTOBER.—*Flowers of the Month*.—China-aster, holly, and ivy.

1041. *Gardening Operations*.—Sow rose-tree seeds and fruit stones, also larkspurs and the hardier annuals to stand the winter, also hyacinths and smooth bulbs, in pots and glasses. Plant young trees, cuttings of jasmine, honeysuckle, and evergreens. Sow mignonette for pots in winter. Plant cabbages, &c., for spring. Cut down asparagus, separate roots of daisies, irises, &c. Trench, drain, and manure.

1042. NOVEMBER.—*Flowers of the month*.—Laurestine and Wych Hazel.

1043. *Gardening Operations*.—Sow sweet peas for an early crop. Take up dahlia roots. Complete beds for asparagus and artichokes. Plant dried roots of border flowers, daisies, &c. Take potted-mignonette in-doors. Set strawberries. Sow peas, leeks, beans, and radishes. Plant rhubarb in rows. Prune hardy trees, and plant stocks of fruit trees. Store carrots, &c. Shelter from frost where it may be required. Plant shrubs for forcing. Continue to trench and manure vacant ground.

1044. DECEMBER.—*Flowers of the month*.—Cyclamen and Winter aconite. (Holly berries are now available for floral decoration.)

1045. *Gardening Operations*.—Continue in open weather to prepare vacant ground for spring, and to protect plants from frost. Cover bulbous roots with matting. Dress flower borders. Pre-

pare forcing ground for cucumbers, and force asparagus and secale. Plant gooseberry, currant, apple and pear trees. Roll grass plate if the season be mild and not too wet. Prepare poles, stakes, pea-sticks, &c., for spring.

1046. KITCHEN GARDEN.—This is one of the most important parts of general domestic economy, whenever the situation of a house will permit a family to avail themselves of its assistance, in aid of butchers' bills. It is, indeed, much to be regretted that small plots of ground, in the immediate vicinity of the metropolis more especially, are too often frittered away into shrubberies and baby gardens, when they might more usefully be employed in raising vegetables for the family, during the week-day residence in town, than wasting their sweetness on the smoky air in all the pride of lilac, hollyhock, and bachelors' buttons, to be merely smelled to, by the whole immigrating household on the day of rest. With a little care and attention, a kitchen-garden, though small, might be rendered not only useful, but, in fact, as ornamental as a modern grass carpet; and the same expense incurred to make the ground a labyrinth of sweets, might suffice to render it agreeable to the palate, as well as to the olfactory nerves, and that even without offending the most delicate optics. It is only in accordance with our plan to give the hint, and to record such novel points as may facilitate the proposed arrangement. It is one objection to the adoption of a kitchen-garden in front of the dwelling, or in sight of the family apartments, that its very nature makes it rather an eye-sore than otherwise at all seasons. This, however, is an objection that may be readily got over by a little attention to neatness and good order, whilst the plants themselves, if judiciously attended to, and the borders sown or planted with *ranunculus*, *polyanthus*, *mignonette*, &c., in succession, will really be ornamental: but then, in cutting the plants for use, the business must be done neatly, all useless leaves

cleared from the ground; the roots no longer wanted taken up, and the ravages of insects to be guarded against by sedulous extirpation. It will also be found a great improvement, where space will admit of it, to surround the beds with neat espaliers, with fruit trees, or even gooseberry and currant bushes trained along them, instead of these being suffered to grow in a state of ragged wildness.

1047. TEMPERANCE.—“If” observes a writer, “men lived uniformly in a healthy climate, were possessed of strong and vigorous frames, were descended from healthy parents, were educated in a hardy and active manner, were possessed of excellent natural dispositions, were placed in comfortable situations in life, were engaged only in healthy occupations, were happily connected in marriage, and kept their passions in due subjection, there would be little occasion for medical rules.” All this is very excellent and desirable; but, unfortunately for mankind, unattainable.

1048. MAN must be something more than man, to be able to connect the different links of this harmonious chain—to consolidate this *summum bonum* of earthly felicity into one uninterrupted whole; for, independent of all regularity or irregularity of diet, passions, and other sublimary circumstances, contingencies, and connections, relative or absolute, thousands are visited by diseases and precipitated into the grave, independent of accident, to whom no particular vice could attach, and with whom the appetite never overstepped the boundaries of temperance. Do we not hear almost daily of instances of men living near to and even upwards of a century? We cannot account for this either; because of such men we know but few who have lived otherwise than the world around them; and we have known many who have lived in habitual intemperance for forty or fifty years without interruption and with little apparent inconvenience.

1049. THE assertion has been made by those who have attained a great age (Parr, and Henry Jenkins, for instance,) that they adopted no particular arts for the preservation of their health; consequently, it might be inferred that the duration of life has no dependence on manners or customs, or the qualities of particular food. This, however, is an error of no common magnitude.

1050. PEASANTS, labourers, and other hard-working people, more especially those whose occupations require them to be much in the open air, may be considered as following a regulated system of moderation; and hence the higher degree of health which prevails among them and their families. They also observe rules; and those which it is said were recommended by Old Parr are remarkable for good sense; namely, "keep your head cool by temperance, your feet warm by exercise; rise early, and go soon to bed; and if you are inclined to get fat, keep your eyes open and your mouth shut." In other words, sleep moderately, and be abstemious in diet;—excellent admonitions, more especially to those inclined to corpulency.

1051. THE ADVANTAGES to be derived from a regular mode of living, with a view to the preservation of health and life, are nowhere better exemplified than in the precepts and practice of Plutarch, whose rules for this purpose are excellent; and by observing them himself, he maintained his bodily strength and mental faculties unimpaired to a very advanced age. Galen is a still stronger proof of the advantages of a regular plan, by means of which he reached the great age of 140 years, without having ever experienced disease. His advice to the readers of his "Treatise on Health," is as follows:—"I beseech all persons who shall read this work, not to degrade themselves to a level with the brutes, or the rabble, by gratifying their sloth, or by eating and drinking promiscuously whatever pleases their palates, or by indulging their appetites of every kind. But

whether they understand physic or not, let them consult their reason, and observe what agrees, and what does not agree with them, that, like wise men, they may adhere to the use of such things as conduce to their health, and forbear everything which, by their own experience, they find to do them hurt; and let them be assured that, by a diligent observation and practice of this rule, they may enjoy a good share of health, and seldom stand in need of physic or physicians."

1052. CHILDREN.—Happy indeed is the child who, during the first period of its existence, is fed upon no other aliment than the milk of its mother, or that of a healthy nurse. If other food becomes necessary before the child has acquired teeth, it ought to be of a liquid form: for instance, biscuits or stale bread boiled in an equal mixture of milk and water, to the consistence of a thick soup; but by no means even this in the first week of its life.

1053. FLOUR OR MEAL ought never to be used for soup, as it produces viscid humours, instead of a wholesome nutritious chyle.

1054. AFTER THE FIRST SIX MONTHS, weak veal or chicken broth may be given, and also, progressively, vegetables that are not very flatulent; for instance, carrots, endive, spinach, parsnips, with broth and boiled fruit, such as apples, pears, plums, and cherries.

1055. WHEN THE INFANT IS WEANED, and has acquired its proper teeth, it is advisable to let it have small portions of meat, and other vegetables, as well as dishes prepared of flour, &c., so that it may gradually become accustomed to every kind of strong and wholesome food.

1056. WE OUGHT, however, to be cautious, and not upon any account to allow a child pastry, confectionery, cheese, heavy dishes made of boiled or baked flours, onions, horse-radish, mustard, smoked and salted meat, especially pork, and all compound dishes; for the most simple food is the most salubrious

1057. POTATOES should be allowed only in moderation, and not to be eaten with butter, but rather with other vegetables, either mashed up or in broth.

1058. THE TIME OF TAKING FOOD is not a matter of indifference: very young infants make an exception; for, as their consumption of vital power is more rapid, they may be more frequently indulged with aliment.

1059. It is, however, advisable to accustom even them to a certain regularity, so as to allow them their victuals at stated periods of the day; for it has been observed, that those children which were fed indiscriminately through the whole day, were subject to debility and disease. The stomach should be allowed to recover its tone, and to collect the juices necessary for digestion, before it is supplied with a new portion of food.

1060. THE following order of giving food to children has been found proper, and conducive to their health:—After rising in the morning, suppose about six o'clock, a moderate portion of lukewarm milk, with well baked bread, which should by no means be new; at nine o'clock, bread with some fruit, or, if fruit be scarce, a small quantity of fresh butter; about twelve o'clock, the dinner of a sufficient quantity; between four and five o'clock, some bread with fruit, or, in winter, the jam of plums, as a substitute for fruit.

1061. ON this occasion, children should be allowed to eat till they are satisfied, without surfeiting themselves, that they may not crave for a heavy supper, which disturbs their rest, and is productive of bad humours: lastly, about seven o'clock, they may be permitted a light supper, consisting either of milk, soup, fruit, or boiled vegetables and the like, but neither meat nor meaty dishes, nor any article of food which produces flatulency; in short, they ought then to eat but little, and remain awake at least for one hour after it.

1062. It has often been contended

that bread is hurtful to children; but this applies only to new bread, or such as is not sufficiently baked; for instance our rolls, muffins, and crumpets, than which nothing can be more hurtful and oppressive. Good wheaten bread is extremely proper during the first years of infancy; but that made of rye, or a mixture of wheat and rye, would be more conducive to health after the age of childhood.

1063. WITH RESPECT TO DRINK, physicians are decidedly against giving it to children in large quantities, and at irregular periods, whether it consists of the mother's milk, or any other equally mild liquor.

1064. IT IS IMPROPER and pernicious to keep infants continually at the breast; and it would be less hurtful, nay even judicious, to let them cry for a few nights, rather than to fill them incessantly with milk, which readily turns sour on the stomach, weakens the digestive organs, and ultimately generates scrofulous affections.

1065. IN THE LATTER PART OF THE FIRST YEAR, pure water may occasionally be given; and if this cannot be procured, a light and well-fermented table-beer might be substituted. Those parents who accustom their children to drink water only, bestow on them a fortune, the value and importance of which will be sensibly felt through life.

1066. MANY children, however, acquire a habit of drinking during their meals; it would be more conducive to digestion, if they were accustomed to drink only after having made a meal. This useful rule is too often neglected, though it be certain that inundations of the stomach, during the mastication and maceration of the food, not only vitiate digestion, but they may be attended with other bad consequences; as cold drink, when brought in contact with the teeth previously heated, may easily occasion cracks or chinks in these useful bones, and pave the way for their carious dissolution.

1067. IF WE INQUIRE into the cause, which produces the crying of infants,

we shall find that it seldom originates from pain, or uncomfortable sensations; for those who are apt to imagine that such causes must *always* operate on the body of an infant, are egregiously mistaken; inasmuch as they conceive that the physical condition, together with the method of expressing sensations, is the same in infants and adults.

1068. IT REQUIRES, however, no demonstration that the state of the former is essentially different from that of the latter.

1069. IN THE FIRST YEAR OF INFANCY, many expressions of the tender organs are to be considered only as efforts or manifestations of power.

1070. WE OBSERVE, for instance, that a child, as soon as it is undressed or disencumbered from swaddling clothes, moves its arms and legs, and often makes a variety of strong exertions; yet no reasonable person would suppose that such attempts arise from a preternatural or oppressive state of the little agent.

1071. It is therefore equally absurd to draw an unfavourable inference from every inarticulate cry; because, in most instances, these vociferating sounds imply the effort which children necessarily make to display the strength of their lungs, and exercise the organs of respiration.

1072. NATURE has wisely ordained that by these very efforts the power and utility of functions so essential to life should be developed, and rendered more perfect with every inspiration.

1073. HENCE it follows, that those over-anxious parents or nurses, who continually endeavour to prevent infants from crying, do them a material injury; for, by such imprudent management, their children seldom or never acquire a perfect form of the breast, while the foundation is laid in the pectoral vessels for obstructions, and other diseases.

1074. INDEPENDENTLY of any particular causes, the cries of children, with regard to their general effects, are highly beneficial and necessary.

1075. IN THE FIRST PERIOD OF LIFE, such exertions are the almost only exercise of the infant: thus the circulation of the blood, and all the other fluids, is rendered more uniform; digestion, nutrition, and the growth of the body, are thereby promoted; and the different secretions, together with the very important office of the skin, or insensible perspiration, are duly performed.

1076. HENCE it is extremely improper to consider every noise of an infant as a claim upon our assistance, and to intrude either food or drink, with a view to satisfy its supposed wants. By such injudicious conduct, children readily acquire the injurious habit of demanding things, or nutriment, at improper times, and without necessity; their digestion becomes impaired; and consequently, at this early age, the whole mass of the fluids is gradually corrupted.

1077. IF, HOWEVER, the mother or nurse has no recourse to the administration of aliment, they at least remove the child from its couch, carry it about, frequently in the middle of the night, and thus expose it to repeated colds, which are in their effects infinitely more dangerous than the most violent cries.

1078. WE LEARN from daily experience, that children who have been the least indulged thrive much better, unfold all their faculties quicker, and acquire more muscular strength and vigour of mind than those who have been constantly favoured, and treated by their parents with the most solicitous attention: bodily weakness and mental imbecility are the usual attributes of the latter.

1079. THE FIRST and principal rule of education ought never to be forgotten; that man is intended to be a free and independent agent; that his moral and physical powers ought to be spontaneously developed; and that he should as soon as possible be made acquainted with the nature and uses of all his faculties, in order to attain that

degree of perfection which is consistent with the structure of his organs; and that he is not originally designed for what we endeavour to make of him by artificial aid.

1080. HENCE the greatest art in educating children consists in the continual vigilance over all their actions, without ever giving them an opportunity of discovering that they are guided and watched.

1081. THERE ARE, however, instances in which the loud complaints of infants deserve our attention.

1082. THUS, if their cries be unusually violent and long continued, we may conclude that they are troubled with colic pains; if, on such occasions, they move their arms and hands repeatedly towards the face, painful teething may account for the cause; and if other morbid phenomena accompany their cries, or if these expressions be repeated at certain periods of the day, we ought not to slight them, but endeavour to discover the proximate or remote causes.

1083. INFANTS cannot sleep too long; and it is a favourable symptom, when they enjoy a calm and long-continued rest, of which they should by no means be deprived, as this is the greatest support granted to them by nature.

1084. A CHILD lives, comparatively, much faster than an adult; its blood flows more rapidly; every stimulus operates more powerfully; and not only its constituent parts, but its vital resources also are more speedily consumed.

1085. SLEEP promotes a more calm and uniform circulation of the blood; it facilitates the assimilation of the nutriment received, and contributes towards a more copious and regular deposition of alimentary matter, while the horizontal posture is the most favourable to the growth and development of the child.

1086. SLEEP ought to be in proportion to the age of the infant. After the age of six months, the periods of sleep, as well as all other animal functions, may

in some degree be regulated; yet, even then, a child should be suffered to sleep the whole night, and several hours both in the morning and in the afternoon.

1087. MOTHERS and nurses should endeavour to accustom infants, from the time of their birth, to sleep in the night preferably to the day, and for this purpose they ought to remove all external impressions which may disturb their rest, such as noise, light, &c., but especially not to obey every call for taking them up, and giving food at improper times.

1088. AFTER THE SECOND YEAR of their age, they will not instinctively require to sleep in the forenoon, though, after dinner it may be continued to the third and fourth year of life, if the child shows a particular inclination to repose; because, till that age, the full half of its time may safely be allotted to sleep.

1089. FROM THAT PERIOD, however, it ought to be shortened for the space of one hour with every succeeding year; so that a child of seven years old may sleep about eight, and not exceeding nine hours: this proportion may be continued to the age of adolescence, and even manhood.

1090. TO AWAKEN CHILDREN from their sleep with a noise, or in an impetuous manner, is extremely injudicious and hurtful: nor is it proper to carry them from a dark room immediately into a glaring light, or against a dazzling wall; for the sudden impression of light debilitates the organs of vision, and lays the foundation of weak eyes, from early infancy.

1091. A BED-ROOM, or nursery, ought to be spacious and lofty, dry, airy, and not inhabited through the day.

1092. NO SERVANTS, if possible, should be suffered to sleep in the same room, and no linen or washed clothes should ever be hung there to dry, as they contaminate the air in which so considerable a portion of infantine life must be spent.

1093. THE CONSEQUENCES attending

a vitiated atmosphere in such rooms, are various, and often fatal.

1094. FEATHER-BEDS should be banished from nurseries, as they are an unnatural and debilitating contrivance.

1095. THE WINDOWS should never be opened at night, but left open the whole day, in fine clear weather.

1096. LASTLY, the bedstead must not be placed too low on the floor ; nor is it proper to let children sleep on a couch which is made without any elevation from the ground ; because the most mephitic and pernicious stratum of air in an apartment, is that within one or two feet from the floor, while the most wholesome, or atmospheric air, is in the middle of the room, and the inflammable gas ascends to the top.

1097. FAMILY TOOL CHESTS.—Much inconvenience, and considerable expense might be saved, if it was the general custom to keep in every house certain tools for the purpose of performing at home what are called small jobs, instead of being always obliged to send for a mechanic and pay him for executing little things that, in most cases, could be sufficiently well done by a man or boy belonging to the family, provided that the proper instruments were at hand.

1098. THE COST of these articles is very trifling, and the advantages of having them always in the house are far beyond the expense.

1099. FOR INSTANCE, there should be an axe, a hatchet, a saw (a large wood-saw also, with a buck or stand, if wood is burned), a claw-hammer, a mallet, two gimlets of different sizes, two screw-drivers, a chisel, a small plane, one or two jack-knives, a pair of large scissors or shears, and a carpet fork or stretcher.

1100. ALSO an assortment of nails of various sizes, from large spikes down to small tacks, not forgetting brass-headed nails, some larger and some smaller.

1101. SCREWS, likewise, will be found very convenient, and hooks on which to hang things.

1102. THE NAILS and screws should

be kept in a wooden box, made with divisions to separate the various sorts, for it is very troublesome to have them mixed.

1103. AND LET CARE BE TAKEN to keep up the supply, lest it should run out unexpectedly, and the deficiency cause delay and inconvenience at a time when their use is wanted.

1104. IT IS WELL to have somewhere, in the lower part of the house, a deep light closet, appropriated entirely to tools and things of equal utility, for executing promptly such little repairs as convenience may require, without the delay or expense of procuring an artisan. This closet should have at least one large shelf, and that about three feet from the floor.

1105. BENEATH this shelf may be a deep drawer, divided into two compartments. This drawer may contain cakes of glue, pieces of chalk, and balls of twine of different size and quality.

1106. THERE may be shelves at the sides of the closet for glue-pots, paste-pots, and brushes, pots for black, white green, and red paint, cans of painting oil, paint-brushes, &c.

1107. AGAINST the wall, above the large shelf, let the tools be suspended, or laid across nails or hooks of proper size to support them.

1108. THIS is much better than keeping them in a box, where they may be injured by rubbing against each other, and the hand may be hurt in feeling among them to find the thing that is wanted.

1109. BUT when hung up against the back wall of the closet, of course each tool can be seen at a glance.

1110. WE have been shown an excellent and simple contrivance for designating the exact places allotted to all these articles in a very complete tool closet.

1111. ON the closet wall, directly under the large nails that support the tools, is drawn with a small brush dipped in black paint or ink, an outline representation of the tool or instrument belonging to that particular place.

1112. For instance, under each saw is sketched the outline of that saw, under each gimlet a sketch of that gimlet, under the screw-drivers are slight drawings of screw-drivers.

1113. So that when bringing back any tool that has been taken away for use, the exact spot to which it belongs can be found in a moment; and all confusion in putting them up and finding them again is thus prevented.

1114. WRAPPING paper may be piled on the floor under the large shelf. It can be bought very low by the ream, at the large paper warehouses; and every house should keep a supply of it in several varieties.

1115. For instance, coarse brown paper for common purposes, that denominated ironmonger's paper, which is strong, thick, and in large sheets, is useful for packing heavy articles; and equally so for keeping silks, ribbons, blondes, &c., as it preserves their colours.

1116. PRINTED PAPERS are unfit for wrapping anything, as the printing ink rubs off on the articles enclosed in them and also soils the gloves of the person that carries the parcel.

1117. WHEN shopping, if the person at the counter proceeds to wrap up your purchase in a newspaper (a thing rarely attempted in a genteel shop), refuse to take it in such a cover.

1118. It is the business of every respectable shopkeeper to provide proper paper for this purpose, and printed paper is not proper.

1119. Waste newspapers had best be used for lighting fires, and singeing poultry.

1120. WASTE-PAPER that has been written on, cut into slips, and creased and folded, makes very good allumettes or lamp-lighters. These matters may appear of trifling importance, but order and regularity are necessary to happiness.

1121. CHINA AND GLASS WARE. —The best material for cleansing either porcelain or glass-ware, is Fuller's earth; but it must be beaten

into a fine powder, and carefully cleared from all rough or hard particles, which might endanger the polish of the brilliant surface.

1122. IN CLEANING porcelain it must also be observed that some species require more care and attention than others, as every person must have observed that china-ware in common use frequently loses some of its colours.

1123. THE RED, especially of vermillion, is the first to go, because that colour, together with some others, is laid on by the Chinese after burning.

1124. THE MODERN CHINESE PORCELAIN is not, indeed, so susceptible of this rubbing or wearing off, as vegetable reds are now used by them instead of the mineral colour.

1125. MUCH OF THE RED now used in China is actually produced by the anatto extracted from the cuttings of scarlet cloth, which have long formed an article of exportation to Canton.

1126. IT OUGHT to be taken for granted that all china or glass-ware is well tempered; yet a little careful attention may not be misplaced, even on that point: for though ornamental china or glass-ware are not exposed to the action of hot water in common domestic use, yet they may be injudiciously immersed in it for the purpose of cleaning; and, as articles intended solely for ornament, may not be so highly annealed as others, without any fraudulent negligence on the part of the manufacturer, it will be proper never to apply water to them beyond a tepid temperature.

1127. AN INGENIOUS and simple mode of annealing glass has been some time in use by chemists. It consists in immersing the vessel in cold water, gradually heated to the boiling point, and suffered to remain till cold, when it will be fit for use. Should the glass be exposed to a higher temperature than that of boiling water, it will be necessary to immerse it in oil.

1128. HAVING thus guarded against fractures, we naturally come to the

best modes of repairing them when they casually take place, for which purpose various mixtures have been proposed; and it will here be sufficient to select only those which excel in neatness and facility.

1129. PERHAPS the best cement, both for strength and invisibility, is that made from mastic. The process, indeed, may be thought tedious; but a sufficient quantity may be made at once to last a lifetime. To an ounce of mastic add as much highly rectified spirits of wine as will dissolve it. Soak an ounce of isinglass in water until quite soft, then dissolve it in pure rum or brandy, until it forms a strong glue, to which add about a quarter of an ounce of gum ammoniac, well rubbed and mixed. Put the two mixtures together in an earthen vessel over a gentle heat; when well united, the mixture may be put into a phial and kept well stopped.

1130. WHEN WANTED FOR USE, the bottle must be set in warm water, when the china or glass articles must be also warmed and the cement applied.

1131. IT WILL BE PROPER that the broken surfaces, when carefully fitted, shall be kept in close contact for twelve hours at least, until the cement is fully set; after which the fracture will be found as secure as any part of the vessel, and scarcely perceptible. It may be applied successfully to marbles, and even to metals.

1132. WHEN NOT PROVIDED with this cement, and in a hurry, the white of an egg well beaten with quicklime, and a small quantity of very old cheese, form an excellent substitute, either for broken china, or old ornamental glass-ware.

1133. IT IS ALSO A FACT well ascertained, that the expressed juice of garlic is an everlasting cement, leaving no mark of fracture, if neatly done.

1134. THESE are fully sufficient for every useful purpose; but we may still further observe, in respect to the cement of quicklime, that it may be improved, if, instead of cheese, we substitute the whey produced by boiling

milk and vinegar, separating the curd carefully, and beating up with half a pint of it, the whites of six eggs, adding the sifted quicklime until it forms a thick paste, which resists both fire and water. (See 139.)

#### 1135. ECONOMY OF FUEL.—

There is no part of domestic economy which everybody professes to understand better than the management of a fire, and yet there is no branch in the household arrangement where there is a greater proportional and unnecessary waste than arises from ignorance and mismanagement in this article.

1136. IT IS AN OLD ADAGE that we must stir no man's fire until we have known him seven years; but we might find it equally prudent if we were careful as to the stirring of our own.

1137. ANYBODY, indeed, can take up a poker and toss the coals about; but that is not stirring a fire!

1138. IN SHORT, the use of a poker applies solely to two particular points—the opening of a dying fire, so as to admit the free passage of the air into it, and sometimes, but not always, through it—or else approximating the remains of a half-burned fire, so as to concentrate the heat, whilst the parts still ignited are opened to the atmosphere.

1139. THE SAME OBSERVATION may apply to the use of a pair of bellows, the mere blowing of which, at random, nine times out of ten will fail; the force of the current of air sometimes blowing out the fire, as it is called, that is, carrying off the caloric too rapidly, and at others, directing the warmed current from the unignited fuel, instead of into it.

1140. TO PROVE THIS, let any person sit down with a pair of bellows, to a fire only partially ignited, or partially extinguished; let him blow, at first, not into the burning part, but into the dead coals close to it, so that the air may partly extend to the burning coal.

1141. AFTER A FEW BLASTS let the bellows blow into the burning fuel, but directing the stream partly towards the

dead coal ; when it will be found that the ignition will extend much more rapidly than under the common method of blowing furiously into the flame at random.

1142. IF THE CONSUMER, instead of ordering a large supply of coals at once, will, at first, content himself with a sample, he may with very little trouble ascertain who will deal fairly with him ; and, if he wisely pays ready money, he will be independent of his coal merchant ; a situation which few families, even in genteel life, can boast of.

1143. INDEED we cannot too often repeat the truth, that to deal for ready money only, in all the departments of domestic arrangement, is the truest economy.

1144. READY MONEY will always command the best and cheapest of every article of consumption, if expended with judgment ; and the dealer, who intends to act fairly, will always prefer it.

1145. TRUST NOT him who seems more anxious to give credit than to receive cash.

1146. THE FORMER hopes to secure custom by having a hold upon you in his books ; and continues always to make up for his advance, either by an advanced price, or an inferior article ; whilst the latter knows that your custom can only be secured by fair dealing.

1147. THERE IS, likewise, another consideration, as far as economy is concerned, which is not only to buy with ready money, but to buy at proper seasons ; for there is with every article a cheap season and a dear one ; and with none more than coals : inasmuch that the master of a family who fills his coal cellar in the middle of the summer, rather than the beginning of the winter, will find it filled at less expense than it would otherwise cost him ; and will be enabled to see December's snows falling without feeling his enjoyment of his fireside lessened by the consideration that the cheerful blaze is supplied at twice the rate that it need have done, if he had exercised more foresight.

1148. WE MUST NOW CALL to the recollection of our readers, that chimneys often smoke, and that coals are often wasted by throwing too much fuel at once upon a fire.

1149. TO PROVE THIS OBSERVATION, it is only necessary to remove the superfluous coal from the top of the grate, when the smoking instantly ceases ; as to the waste, that evidently proceeds from the frequent intemperate, and injudicious use of the poker, which not only throws a great portion of the small coals among the cinders, but often extinguishes the fire it was intended to foster.

1150. HEALTH IN YOUTH.--Late hours, irregular habits, and want of attention to diet, are common errors with most young men, and these gradually, but at first imperceptibly, undermine the health, and lay the foundation for various forms of disease in after life. It is a very difficult thing to make young persons comprehend this. They frequently sit up as late as twelve, one, or two o'clock, without experiencing any ill effects ; they go without a meal to-day, and to-morrow eat to repletion, with only temporary inconvenience. One night they will sleep three or four hours, and the next nine or ten ; or one night, in their eagerness to get away into some agreeable company, they will take no food at all ; and the next, perhaps, will eat a hearty supper, and go to bed upon it. These, with various other irregularities, are common to the majority of young men, and are, as just stated, the cause of much bad health in mature life. Indeed, nearly all the shattered constitutions with which too many are cursed, are the result of a disregard to the plainest precepts of health in early life.

1151. A WIFE'S POWER.--The power of a wife for good or evil, is irresistible. Home must be the seat of happiness, or it must be for ever unknown. A good wife is to a man, wisdom, and courage, and strength, and endurance. A bad one is confusion,

weakness, discomfiture, and despair. No condition is hopeless where the wife possesses firmness, decision, and economy. There is no outward prosperity which can counteract indolence, extravagance, and folly at home. No spirit can long endure bad domestic influence. Man is strong, but his heart is not adamant. He delights in enterprise and action; but to sustain him he needs a tranquil mind, and a whole heart. He needs his moral force in the conflicts of the world. To recover his equanimity and composure, home must be to him a place of repose, of peace, of cheerfulness, of comfort; and his soul renews its strength again, and goes forth with fresh vigour to encounter the labour and troubles of life. But if at home he finds no rest, and is there met with bad temper, sullenness, or gloom, or is assailed by discontent or complaint, hope vanishes, and he sinks into despair.

1152. ADVICE TO WIVES. — A wife must learn how to form her husband's happiness, in what direction the secret lies; she must not cherish his weaknesses by working upon them; she must not rashly run counter to his prejudices; her motto must be, never to irritate. She must study never to draw largely on the small stock of patience in a man's nature, nor to increase his obstinacy by trying to drive him; never, never, if possible, to have scenes. We doubt much if a real quarrel, even made up, does not loosen the bond between man and wife, and sometimes, unless the affection of both be very sincere, lastingly. If irritation should occur, a woman must expect to hear from most men a strength and vehemence of language far more than the occasion requires. Mild, as well as stern men, are prone to this exaggeration of language; let not a woman be tempted to say anything sarcastic or violent in retaliation. The bitterest repentance must needs follow if she do. Men frequently forget what they have said, but seldom what is uttered by their wives. They are grateful, too,

for forbearance in such cases; for, whilst asserting most loudly that they are right, they are often conscious that they are wrong. Give a little time, as the greatest boon you can bestow, to the irritated feelings of your husband.

1153. COUNSELS FOR THE YOUNG. — Never be cast down by trifles. If a spider break his thread twenty times, twenty times will he mend it again. Make up your minds to do a thing and you will do it. Fear not if a trouble comes upon you; keep up your spirits, though the day be a dark one. If the sun is going down, look up to the stars. If the earth is dark, keep your eye on Heaven! With God's promises, a man or a child may be cheerful. Mind what you run after! Never be content with a bubble that will burst, firewood that will end in smoke and darkness. Get that which you can keep, and which is worth keeping. Fight hard against a hasty temper. Anger will come, but resist it strongly. A fit of passion may give you cause to mourn all the days of your life. Never revenge an injury. If you have an enemy, act kindly to him and make him your friend. You may not win him over at once, but try again. Let one kindness be followed by another, till you have compassed your end. By little and little, great things are completed; and repeated kindness will soften the heart of stone. Whatever you do, do it willingly. A boy that is whipped to school never learns his lessons well. A man who is compelled to work cares not how badly it is performed. He that pulls off his coat cheerfully, strips up his sleeves in earnest, and sings while he works, is the man of action.

1154. SALLY LUNN TEA CAKES. — Take one pint of milk quite warm, a quarter of a pint of thick small-beer yeast: put them into a pan with flour sufficient to make it as thick as batter, — cover it over, and let it stand till it has risen as high as it will, i. e. about two hours: add two ounces of lump sugar, dissolved in a quarter of a pint of warm

milk, a quarter of a pound of butter rubbed into your flour very fine,—then make your dough the same as for French rolls, &c.; let it stand half an hour: then make up your cakes, and put them on tins:—when they have stood to rise, bake them in a quick oven. Care should be taken never to put your yeast to water or milk too hot, or too cold, as either extreme will destroy the fermentation. In summer it should be lukewarm,—in winter a little warmer,—and in very cold weather, warmer still. When it has first risen, if you are not prepared, it will not hurt to stand an hour.

1155. **FRENCH BREAD AND ROLLS.**—Take a pint and a half of milk; make it quite warm; half a pint of small-beer yeast; add sufficient flour to make it as thick as batter; put it into a pan; cover it over, and keep it warm: when it has risen as high as it will, add a quarter of a pint of warm water, and half an ounce of salt,—mix them well together,—rub into a little flour two ounces of butter; then make your dough, not quite so stiff as for your bread; let it stand for three quarters of an hour, and it will be ready to make into rolls, &c.:—let them stand till they have risen, and bake them in a quick oven.

#### 1156. RULES FOR THE PRESERVATION OF HEALTH.

1157. **PURE ATMOSPHERIC AIR** is composed of nitrogen, oxygen, and a very small proportion of carbonic acid gas. Air once breathed has lost the chief part of its oxygen, and acquired a proportionate increase of carbonic acid gas.

1158. *Therefore*, health requires that we breathe the same air once only.

1159. **THE SOLID PART** of our bodies are continually wasting, and requires to be repaired by fresh substances.

1160. *Therefore*, food, which is to repair the loss, should be taken with due regard to the exercise and waste of the body.

1161. **THE FLUID PART** of our bodies

also wastes constantly; there is but one fluid in animals, which is water.

1162. *Therefore*, water only is necessary, and no artifice can produce a better drink.

1163. **THE FLUID** of our bodies is to the solid in proportion as nine to one.

1164. *Therefore*, a like proportion should prevail in the total amount of food taken.

1165. **LIGHT** exercises an important influence upon the growth and vigour of animals and plants.

1166. *Therefore*, our dwellings should freely admit the solar rays.

1167. **DECOMPOSING ANIMAL AND VEGETABLE SUBSTANCES** yield various noxious gases, which enter the lungs and corrupt the blood.

1168. *Therefore*, all impurities should be kept away from our abodes, and every precaution be observed to secure a pure atmosphere.

1169. **WARMTH** is essential to all the bodily functions.

1170. *Therefore*, an equal bodily temperature should be maintained by exercise, by clothing, or by fire.

1171. **EXERCISE** warms, invigorates, and purifies the body; clothing preserves the warmth the body generates; fire imparts warmth externally.

1172. *Therefore*, to obtain and preserve warmth, exercise and clothing are preferable to fire.

1173. **FIRE** consumes the oxygen of the air, and produces noxious gases.

1174. *Therefore*, the air is less pure in the presence of candles, gas, or coal fire, than otherwise, and the deterioration should be repaired by increased ventilation.

1175. **THE SKIN** is a highly-organised membrane, full of minute pores, cells, blood-vessels, and nerves; it imbibes moisture or throws it off, according to the state of the atmosphere and the temperature of the body. It also "breathes," as do the lungs (though less actively). All the internal organs sympathise with the skin.

1176. *Therefore*, it should be repeatedly cleansed.

1177. LATE HOURS and anxious pursuits exhaust the nervous system, and produce disease and premature death.

1178. *Therefore*, the hours of labour and study should be short.

1179. MENTAL AND BODILY EXERCISE are equally essential to the general health and happiness.

1180. *Therefore*, labour and study should succeed each other.

1181. MAN will live most healthily upon simple solids and fluids, of which a sufficient but temperate quantity should be taken.

1182. *Therefore*, strong drinks, tobacco, snuff, opium, and all mere indulgences should be avoided.

1183. SUDDEN ALTERATIONS OF HEAT AND COLD are dangerous (especially to the young and the aged.)

1184. *Therefore*, clothing, in quantity and quality, should be adapted to the alterations of night and day, and of the seasons.

1185. *And, therefore, also*, drinking cold water when the body is hot, and hot tea and soups when cold, are productive of many evils.

1186. MODERATION, in eating and drinking, short hours of labour and study, regularity in exercise, recreation, and rest, cleanliness, equanimity of temper and equality of temperature, these are the great essentials to that which surpasses all wealth, *health of mind and body*.

1187. USE OF LIME-WATER IN MAKING BREAD.—It has lately been found that water saturated with lime produces in bread the same whiteness, softness, and capacity of retaining moisture, as results from the use of alum; while the former removes all acidity from the dough, and supplies an ingredient needed in the structure of the bones, but which is deficient in the *cerealia*. The best proportion to use is, five pounds of water saturated with lime to every nineteen pounds of flour. No change is required in the process of baking. The lime most effectually coagulates the gluten, and the bread

weighs well; bakers must therefore approve of its introduction, which is not injurious to the system, like alum, &c. A large quantity of this kind of bread is now made in Munich, and is highly esteemed.

#### 1188. SPECIAL RULES FOR THE PREVENTION OF CHOLERA.

1189. WE URGE the necessity, in all cases of cholera, of an instant recourse to medical aid, and also under every form and variety of indisposition: for all disorders are found to merge in the dominant disease.

1190. LET IMMEDIATE RELIEF be sought under disorder of the bowels especially, however slight. The invasion of cholera may thus be readily prevented.

1191. LET EVERY IMPURITY, animal and vegetable, be quickly removed to a distance from the habitations, such as slaughter-houses, pig-sties, cesspools, necessaries, and all other domestic nuisances.

1192. LET ALL UNCOVERED DRAINS be carefully and frequently cleansed.

1193. LET THE GROUNDS in and around the habitations be drained, so as effectually to carry off moisture of every kind.

1194. LET ALL PARTITIONS be removed from within and without habitations, which unnecessarily impede ventilation.

1195. LET EVERY ROOM be daily thrown open for the admission of fresh air; this should be done about noon, when the atmosphere is most likely to be dry.

1196. LET DRY SCRUBBING be used in domestic cleansing in place of water cleansing.

1197. LET EXCESSIVE FATIGUE, and exposure to damp and cold, especially during the night, be avoided.

1198. LET THE USE of cold drinks and acid liquors, especially under fatigue, be avoided, or when the body is heated.

1199. LET THE USE of cold acid fruits and vegetables be avoided.

1200. LET EXCESS in the use of ardent and fermented liquors and tobacco be avoided.

1201. LET A POOR DIET, and the use of impure water in cooking, or for drinking, be avoided.

1202. LET THE WEARING of wet and insufficient clothes be avoided.

1203. LET A FLANNEL or woollen belt be worn round the belly.

1204. LET PERSONAL CLEANLINESS be carefully observed.

1205. LET EVERY CAUSE tending to depress the moral and physical energies be carefully avoided. Let exposure to extremes of heat and cold be avoided.

1206. LET CROWDING of persons within houses, and apartments be avoided.

1207. LET SLEEPING in low or damp rooms be avoided.

1208. LET FIRES be kept up during the night in sleeping or adjoining apartments, the night being the period of most danger from attack, especially under exposure to cold or damp.

1209. LET ALL BEDDING and clothing be daily exposed during winter and spring to the fire, and in summer to the heat of the sun.

1210. LET THE DEAD be buried in places remote from the habitation of the living. By the timely adoption of simple means such as these, cholera, or other epidemic will be made to lose its venom.

1211. ETIQUETTE OF THE NEWLY MARRIED.—A newly married couple send out cards immediately after the ceremony to their friends and acquaintance, who, on their part, return either notes or cards of congratulation on the event. As soon as the lady is settled in her new home, she may expect the calls of her acquaintance; for which it is not absolutely necessary to remain at home, although politeness requires that they should be returned as soon as possible. But, having performed this, any further intercourse may be avoided (where it is deemed necessary) by a polite refusal

of invitations. Where cards are to be left, the number must be determined according to the various members of which the family called upon is composed. For instance, where there are the mother, aunt, and daughters (the latter having been introduced to society), three cards should be left.

## 1212.—DISEASES.

*For the proper Remedies and their Doses see "Prescriptions," 1275.*

1213. It should be clearly understood, that in all cases of disease, the advice of a skilful physician is of the first importance. It is not, therefore, intended by the following information to supersede the important and necessary practice of the medical man; but rather, by exhibiting the treatment required, to show in what degree his aid is imperative. In cases, however, where the disorder may be simple and transient, or in which remote residence, or other circumstance may deny the privilege of medical attendance, the following particulars will be found of the utmost value. Moreover, the hints given upon what should be AVOIDED will be of great service to the patient—since the *physiological* is no less important than the *medical* treatment of disease.

1214. APOPLEXY.—Immediate and large bleeding from the arm, cupping at the back of the neck, leeches to the temples, aperients No. 1 and 7, one or two drops of croton oil rubbed or dropped on the tongue. Avoid excesses, intemperance, animal food.

1215. BILE, BILIOUS, OR LIVER COMPLAINTS.—Abstinence from malt liquors, cool homoeopathic oocoea for drink, no tea or coffee, few vegetables, and little bread; bacon in a morning, and well cooked fresh animal food once a day, No. 59 and 60.

1216. CHICKEN POX.—Mild aperients No. 4, superseded by No. 7; No. 8 if much fever accompany the eruption.

1217. CHILBLAINS.—Warm, dry, woollen clothing to exposed parts in cold weather, as a preventive. In the first

stage, frictions with No. 68, use cold. When ulcers form they should be poulticed with bread and water for a day or two, and then dressed with calamine cerate.

**1218. COMMON CONTINUED FEVER.**—Aperients in the commencement No. 1, followed by No. 7; then refrigerants No. 8, and afterwards tonics No. 16, in the stage of weakness. Avoid all excesses.

**1219. COMMON COUGH.**—The linctus No. 57 or No. 58, abstinence from malt liquor, and cold damp air. Avoid cold, damp, and draughts.

**1220. CONSTIPATION.**—The observance of a regular period of evacuating the bowels, which is most proper in a morning after breakfast. The use of mild aperients, No. 62, brown instead of white bread. Avoid too much dry and stimulating food, wine, and opium.

**1221. CONSUMPTION.**—The disease may be complicated with various morbid conditions of the lungs and heart, which require appropriate treatment. To allay the cough No. 57 is an admirable remedy. Avoid cold, damp, excitement, and over exertion.

**1222. CONVULSIONS (CHILDREN).**—If during teething, free lancing of the gums, the warm bath, cold applications to the head, leeches to the temples, an emetic, and a laxative clyster, No. 24.

**1223. CROUP.**—Leeches to the throat, with hot fomentations as long as the attack lasts, the emetic No. 19, afterwards the aperient No. 5. Avoid cold and damp.

**1224. DROPSY.**—Evacuate the water by means of No. 11.

**1225. EPILEPSY.**—If accompanied or produced by fulness of the vessels of the head, leeches to the temples, blisters, and No. 1 and No. 7. If from debility or confirmed epilepsy, the mixture No. 22. Avoid drinking and excitement.

**1226. ERUPTIONS ON THE FACE.**—The powder No. 84 internally, sponging the face with the lotion No. 35. Avoid excesses in diet.

**1227. ERYSIPELAS.**—Aperients, if the patient be strong, No. 1, followed by

No. 7; then tonics No. 31. No. 31 from the commencement in weak subjects.

**1228. FAINTNESS.**—Effusion of cold water on the face, stimulants to the nostrils, pure air, and the recumbent position, afterwards avoidance of the exciting cause. Avoid excitement.

**1229. FROST-BITE AND FROZEN LIMBS.**—No heating or stimulating liquors must be given. Rub the parts affected with ice, cold, or snow water, and lay the patient on a cold bed.

**1230. GOUT.**—The aperients No. 1, followed by No. 28, bathing the parts with gin and water; for drink, weak tea or coffee. Warmth by flannels. Avoid wines, spirits, and animal food.

**1231. GRAVEL.**—No. 5, followed by No. 7; the free use of magnesia as an aperient. The pill No. 26. Avoid fermented drinks, hard water.

**1232. HOOPING COUGH.**—Hooping cough may be complicated with congestion, or inflammation of the lungs, or convulsions, and then becomes a serious disease. If uncomplicated, No. 58.

**1233. HYSTERICS.**—The fit may be prevented by the administration of thirty drops of laudanum, and as many of æther. When it has taken place open the windows, loosen the tight parts of the dress, sprinkle cold water on the face, &c. A glass of wine or cold water when the patient can swallow. Avoid excitement and tight lacing.

**1234. INDIGESTION.**—The pills, No. 2, with the mixture No. 22, at the same time abstinence from veal, pork, mackerel, salmon, pastry, and beer; for drink, homœopathic cocoa, a glass of cold spring water the first thing every morning. Avoid excesses.

**1235. INFLAMMATION OF THE BLADDER.**—Bleeding, aperients No. 5 and No. 7, the warm bath, afterwards opium; the pill No. 12 three times a day till relieved. Avoid fermented liquors, &c.

**1236. INFLAMMATION OF THE BOWELS.**—Leeches, blisters, fomentations, iced-

drinks, the pills No. 23; move the bowels with clysters, if necessary, No. 24. Avoid cold, indigestible food, &c.

**1237. INFLAMMATION OF THE BRAIN:**—Application of cold to the head, bleeding from the temples or back of the neck by leeches or cupping; aperients No. 1 followed by No. 7. Mercury to salivation No. 18. Avoid excitement, study, intemperance.

**1238. INFLAMMATION OF THE KIDNEYS.**—Bleeding from the arm, leeches over the seat of pain, aperients No. 5, followed by No. 7, the warm bath. Avoid violent exercise, rich living.

**1239. INFLAMMATION OF THE LIVER.**—Leeches over the right side, the seat of pain, blisters, aperients No. 1, followed by No. 7, afterwards the pills No. 23, till the gums are slightly tender. Avoid cold, damp, intemperance, and anxiety.

**1240. INFLAMMATION OF THE LUNGS.**—Bleeding from the arm, or over the painful part of the chest by leeches, succeeded by a blister; the demulcent mixture No. 17 to allay the cough, with the powders No. 18. Avoid cold, damp, and draughts.

**1241. INFLAMMATION OF THE STOMACH.**—Leeches to the pit of the stomach, followed by fomentations, cold iced water for drink, bowels to be evacuated by clysters; abstinence from all food except cold gruel, milk and water, or tea. Avoid excesses, and condiments.

**1242. INFLAMMATORY SORE THROAT.**—Leeches and blisters externally, aperients No. 1, followed by No. 7 gargle, to clear the throat No. 20. Avoid cold, damp, and draughts.

**1243. INFLAMED EYES.**—The bowels to be regulated by No. 5, a small blister behind the ear or on the nape of the neck—the eye to be bathed with No. 39.

**1244. INFLUENZA.**—No. 4, as an aperient and diaphoretic. No. 17, to allay fever and cough. No. 31, as a tonic, when weakness only remains. Avoid cold and damp, use clothing suited to the changes of temperature.

**1245. INTERMITTENT FEVER OR AGUE.**—Take No. 16 during the intermission of the paroxysm of the fever; keeping bowels free with a wine-glass of No. 7. Avoid bad air, stagnant pools, &c.

**1246. ITCH.**—The ointment of No. 32, or lotion No. 33.

**1247. JAUNDICE.**—The pills No. 1, afterwards the mixture No. 7, drinking freely of dandelion tea.

**1248. LOOSENESS OF THE BOWELS, ENGLISH CHOLERA.**—One pill No. 23, repeated if necessary; afterwards the mixture No. 25. Avoid unripe fruits, acid drinks, ginger beer; wrap flannel around the abdomen.

**1249. MEASLES.**—A well ventilated room, aperients No. 4, with No. 17, to allay the cough and fever.

**1250. MENSTRUATION (EXCESSIVE).**—No. 47 during the attack, with rest in the recumbent position; in the intervals, No. 46.

**1251. MENSTRUATION (SCANTY).**—In strong patients, cupping the loins, exercise in the open air, the feet in warm water before the expected period, the pills No. 45; in weak subjects, No. 46. Gentle and regular exercise. Avoid hot rooms, and too much sleep.

**1252. MENSTRUATION (PAINFUL).**—No. 48 during the attack, in the intervals No. 45 twice a week, with No. 46. Avoid cold, mental excitement, &c.

**1253. MUMPS.**—Fomentation with a decoction of chamomile, and poppy heads; No. 4, as an aperient, and No. 9, during the stage of fever. Avoid cold, and attend to the regularity of the bowels.

**1254. NERVOUSNESS.**—Cheerful society, early rising, exercise in the open air, particularly on horseback, and No. 15. Avoid excitement, study, and late meals.

**1255. PALPITATION OF THE HEART.**—The pills No. 2, with the mixture No. 15.

**1256. PILES.**—The paste No. 38, at the same time a regulated diet.

**1257. QUINSEY.**—A blister applied all round the throat; an emetic No. 19, commonly succeeds in breaking the ab-

soens, afterwards the gargle No. 20. Avoid cold and damp.

1258. RHEUMATISM.—Bathe the affected parts with No. 27, and take internally No. 28, with No. 29 at bedtime to ease pain, &c. Avoid damp and cold, wear flannel.

1259. RICKETS.—The powders No. 37, a dry, pure atmosphere, a nourishing diet.

1260. RINGWORM.—The lotion No. 36, with the occasional use of the powder No. 5. Fresh air and cleanliness.

1261. SCARLET FEVER.—Well ventilated room, sponging the body when hot with cold or tepid vinegar, or spirit and water; aperients, No. 4; refrigerants, No. 8. If dropsy succeed the disappearance of the eruption, frequent purging with No. 5, succeeded by No. 7.

1262. SCROFULA.—Pure air, light but warm clothing, diet of fresh animal food; bowels to be regulated by No. 6 and No. 30, taken regularly for a considerable time.

1263. SCURVY.—Fresh animal and vegetable food, and the free use of ripe fruits and lemon juice. Avoid cold and damp.

1264. SMALL POX.—A well ventilated apartment, mild aperients, if fever be present, No. 7, succeeded by refrigerants No. 8, and tonics No. 16, in the stage of debility, or decline of the eruption.

1265. ST. VITUS'S DANCE.—The occasional use in the commencement of No. 5, followed by No. 7, afterwards No. 61.

1266. THRUSH.—One of the powders No. 6 every other night, in the intervals a dessert spoonful of the mixture No. 22 three times a day; white spots to be dressed with the honey of borax.

1267. THE DOLORS.—Regulate the bowels with No. 3, and take in the intervals of pain No. 31. Avoid cold, damp, and mental anxiety.

1268. TOOTH-ACHE.—Continue the use of No. 8 for a few alternate days. Apply liquor ammonia to reduce the pain, and when that is accomplished,

fill the decayed spots with silver succedaneum without delay, or the pain will return. (See 142.)

1269. TYPHUS FEVER.—Sponging the body with cold or tepid water, a well ventilated apartment, cold applications to the head and temples. Aperients No. 4, with refrigerants No. 9, tonics No. 16, in the stage of debility.

1270. WATER ON THE BRAIN.—Local bleeding by means of leeches, blisters, aperients No. 5, and mercurial medicines No. 18.

1271. WHITES.—The mixture No. 43, with the injection No. 44. Clothing light, but warm, moderate exercise in the open air, country residence.

1272. WORMS IN THE INTESTINES.—The aperient No. 5, followed by No. 7, afterwards the free use of lime water and milk in equal parts, a pint daily. Avoid unwholesome food.

### 1273.—PRESCRIPTIONS.

*To be used in the Cases enumerated under the head "Diseases," 1212.*

1274. The following prescriptions, originally derived from various Prescribers' Pharmacopœias, embody the favourite remedies employed by the most eminent physicians:—

1. Take of powdered rhubarb and chloride of mercury each four grains; syrup of ginger, sufficient to make two pills; at bedtime; in fevers and inflammations.

2. Powdered rhubarb, socotrine aloes, and gum mastiche, each one scruple; make into twelve pills; one before and one after dinner.

3. Compound extract of colocynth, extract of jalap, and Castile soap, of each one scruple; make into twelve pills.

4. James's powder, five grains; calomel, three grains; in fevers.

5. Calomel, three grains; compound powder of scammony, twelve grains; in worms and tumid belly in children.

6. Powdered rhubarb, four grains; mercury and chalk, three grains; ginger in powder, one grain; an alterative aperient for children.

7. Dried sulphate of magnesia, six drams; sulphate of soda, three drams; infusion of senna, seven ounces; tincture of jalap, and compound tincture of cardamoms, each half an ounce; in acute diseases generally; take two tablespoonfuls every four hours, till it operates freely.

8. Nitrate of potass, one dram and a half; spirits of nitric æther, half an ounce; camphor mixture, and the spirit of mindererus, each four ounces; in fevers, &c.; two tablespoonfuls three times a day.

9. Spirit of nitric æther, three drams; dilute nitric acid, two drams; syrup, three drams; camphor mixture, seven ounces; in fevers, &c., with debility, dose as last.

10. Spirit of mindererus and camphor mixture, of each three ounces and a half; wine of antimony, one dram and a half; wine of ipecacuanha, one dram and a half; syrup of Tolu, half an ounce; dose as last.

11. Decoction of broom, half a pint; cream of tartar, one ounce; tincture of squills, two drams; in dropsies, a third part three times a day.

12. Pills of soap and opium, five grains for a dose, as directed.

13. Compound powder of ipecacuanha, seven to twelve grains for a dose, as directed.

14. Battley's solution of opium, from ten to forty drops; camphor mixture, an ounce and a half; in a draught at bedtime.

15. Ammoniated tincture of valerian, six drams; camphor mixture, seven ounces; a fourth part three times a day; in spasmodic and hysterical disorders.

16. Disulphate of quina, half a dram; dilute sulphuric acid, twenty drops; compound infusion of roses, eight ounces; two tablespoonfuls every four hours, in intermittent fever during the absence of the paroxysm.

17. Almond mixture, seven ounces and a half; wine of antimony and ipecacuanha, of each one dram and a half; a tablespoonful every four hours, in cough with fever, &c.

18. Calomel, one grain; powdered white sugar, two grains; to make a powder to be placed on the tongue every two or three hours.

19. Antimony and ipecacuanha, wines of each an ounce; a teaspoonful every ten minutes till it vomits.

20. Compound infusion of roses, seven ounces; tincture of myrrh, one ounce.

21. Decoction of bark, six ounces; aromatic confection, one dram; tincture of opium, five drops.

22. Infusion of orange peel, seven ounces; tincture of hops, half an ounce; and a dram of carbonate of soda—two tablespoonfuls twice a day.

23. Blue pill, four grains; opium, half a grain; to be taken three times a day.

24. FOR A CLYSTER.—A pint and a half of gruel or fat broth, a tablespoonful of castor oil, one of common salt, and a lump of butter; mix, to be injected slowly.

25. Chalk mixture, seven ounces; aromatic and opiate confection, of each one dram; tincture of catechu, six drams; two tablespoonfuls every two hours.

26. Carbonate of soda, powdered rhubarb, and Castile soap, each one dram; make thirty-six pills; three twice a day.

27. LOTION.—Common salt, one ounce; distilled water, seven ounces; spirits of wine, one ounce; mix.

28. Dried sulphate of magnesia, six drams; heavy carbonate of magnesia, two drams; wine of colchicum, two drams; water, eight ounces; take two tablespoonfuls every four hours.

29. Compound powder of ipecacuanha, eight grains; powdered guaiacum, four grains; in a powder at bedtime.

30. Brandish's solution of potash; thirty drops twice a day in a wine glass of beer.

31. Disulphate of quina, half a dram; dilute sulphuric acid, ten drops; compound infusion of roses, eight ounces; two tablespoonfuls every four hours.

and as a tonic in the stage of weakness succeeding fever.

32. Flowers of sulphur, two ounces hog's lard, four ounces; white hellebore powder, half an ounce; oil of lavender, sixty drops.

33. Hydriodate of potass two drams, distilled water eight ounces.

34. Flowers of sulphur half a dram; carbonate of soda, a scruple; tartarised antimony, one-eighth of a grain; one powder, night and morning, in eruptions of the skin or face.

35. Milk of bitter almonds, seven ounces; bichloride of mercury, four grains; spirits of rosemary, one ounce; bathe the eruption with this lotion three times a day.

36. Sulphate of zinc, two scruples; sugar of lead, fifteen grains; distilled water, six ounces; the parts to be washed with the lotion two or three times a day.

37. Carbonate of iron, six grains; powdered rhubarb, four grains; one powder night and morning.

38. Elecampane powder, two ounces; sweet fennel seed powder, three ounces; black pepper powder, one ounce; purified honey, and brown sugar, of each two ounces; the size of a nutmeg, two or three times a day.

39. Sulphate of zinc, twelve grains; wine of opium, one dram; rose water six ounces.

40. Common salt, one ounce; water four ounces; spirits of wine and vinegar, each two ounces; the parts to be bathed or rubbed with this lotion frequently.

41. Spirits of wine and distilled vinegar, each one ounce; rose water, six ounces; the parts to be kept constantly damp with the lotion.

42. Linseed oil and lime water, equal parts; anoint the injured parts frequently with a feather.

43. Sulphate of magnesia, six drams; sulphate of iron, ten grains; dilute sulphuric acid, forty drops; tincture of cardamoms, (compound), half an ounce; water, seven ounces; a fourth part night and morning.

44. Decoction of oak bark, a pint; dried alum, half an ounce; for an injection, a syringeful to be used night and morning.

45. Compound gamboge pill, and a pill of assafoetida and aloes, of each half a dram; make twelve pills, two twice or three times a week.

46. Griffiths' mixture — one tablespoonful three times a day.

47. Ergot of rye, five grains; in a powder, to be taken every four hours.

48. Powdered opium, half a grain; camphor, two grains; in a pill, to be taken every three or four hours whilst in pain.

49. Balsam of copaiba, half an ounce; powdered cubebs, half an ounce; solution of potass, three drams; powdered acacia, two drams; laudanum, twenty drops; cinnamon water, seven ounces one tablespoonful three times a day.

50. Tartarised antimony, two grains; sulphate of magnesia, six drams; nitrate of potass, one dram; compound tincture of cardamoms, half an ounce; water, eight ounces.

51. Lime water, two ounces; calomel, one scruple; make a lotion, to be applied by means of soft lint.

52. Blue pill, five grains; powdered opium, half a grain; two pills at night and one in the morning.

53. Binioidide of mercury, two grains; hydriodate of potass, one dram; extract of sarsaparilla, one ounce; water, eight ounces; one tablespoonful three times a day.

54. Sulphate of zinc, twenty-four grains, in a wine glass of water, to be given for an emetic, and repeated if necessary.

55. Dill water, one and a half ounces; volatile tincture of valerian, twenty drops; tincture of cartor, one dram; spirits of sulphuric ether, twenty drops; make a draught to be taken three times a day.

56. Syrup of poppies, oxymel of squills, of each one ounce; solution of potash, two drams; a teaspoonful frequently.

57. Syrup of balsam of Tolu, two

ounces; the muriate of morphia, two grains; muriatic acid, twenty drops; a teaspoonful twice a day.

58. Salts of tartar, two scruples; twenty grains of powdered cochineal;  $\frac{1}{2}$  lb. of honey; water, half a pint; boil and give a teaspoonful three times a day.

59. Calomel, ten grains; castile soap, extract of jalap, extract of colocynth, of each one scruple; oil of juniper, ten drops; make into eighteen pills and take two at bedtime occasionally.

60. Infusion of orange peel, eight ounces; carbonate of soda, one dram; and compound tincture of cardamoms, half an ounce; take two large teaspoonfuls twice the day succeeding the pills.

61. Carbonate of iron, three ounces; syrup of ginger, sufficient to make an electuary, a teaspoonful three times a day.

62. Take of castile soap, compound extract of colocynth, compound rhubarb pill, and the extract of jalap, of each one scruple; oil of carraway, ten drops; make into twenty pills, and take one after dinner every day whilst necessary.

63. Spirits of rosemary five parts, spirits of wine, or spirits of turpentine, one part.

#### 1275. USEFUL RECEIPTS.

1276. OINTMENT FOR SORE IN THE HEADS OF INFANTS.—Lard, two ounces; sulphuric acid, diluted, two drachms; rub them together, and anoint the head once a day.

1277. RANCID BUTTER.—This may be restored by melting it in a water bath, with some coarsely powdered animal charcoal (which has been thoroughly sifted from dust), and strained through flannel.

1278. REMEDY FOR BLISTERED FEET FROM LONG WALKING.—Rub the feet, at going to bed, with spirits mixed with tallow dropped from a lighted candle into the palm of the hand.

1279. AN EASY METHOD OF EXTERMINATING RATS AND MICE.—Mix powdered nux vomica with oatmeal, and lay it in their haunts, observing proper

precaution to prevent accidents. Another method is, to mix oatmeal with a little powdered phosphorus.

1280. WASH FOR A BLOTCHED FACE.—Rose water, three ounces; sulphate of zinc, one drachm. Mix. Wet the face with it, gently dry it, and then touch it over with cold cream, which also dries gently off.

1281. OIL OF ROSES—FOR THE HAIR.—Olive oil, two pints; otto of roses, one drachm; oil of rosemary, one drachm. Mix. It may be coloured red by steeping a little alkanet root in the oil (with heat) before scenting it.

1282. CURE FOR CHAPPED HANDS.—Instead of washing the hands with soap employ oatmeal, and after each washing take a little dry oatmeal, and rub over the hands, so as to absorb any moisture.

1283. TO PREVENT THE SMOKING OF A LAMP.—Soak the wick in strong vinegar, and dry it well before you use it; it will then burn both sweet and pleasant, and give much satisfaction for the trifling trouble in preparing it.

1284. DR. BIRT DAVIES' GOUT MIXTURE.—Wine of colchicum, one ounce; spirit of nitrous ether, one ounce; iodine of potassium, two scruples; distilled water, two ounces. Mix. A teaspoonful in camomile tea two or three times a day.

1285. TO RENDER LINEN, &c., INCOMBUSTIBLE.—All linen, cotton, muslins; &c. &c., when dipped in a solution of the pure vegetable alkali at a gravity of from 124 to 130 (taking water at the gravity of 100) become incombustible.

1286. TO TAKE GREASE OUT OF VELVET OR CLOTH.—Get some turpentine and pour it over the place that is greasy; rub it till quite dry with a piece of clean flannel; if the grease be not quite removed, repeat the application, and when done, brush the place well, and hang up the garment in the open air to take away the smell.

1287. DR. BABINGTON'S MIXTURE FOR INDIGESTION.—Infusion of calumba, six ounces; carbonate of potassa, one

drachm; compound tincture of gentian, three drachms. Mix. Dose, two or three tablespoonfuls daily at noon.

1288. LEMONADE.—Powdered sugar, four pounds; citric or tartaric acid, one ounce; essence of lemon two drachms; mix well. Two or three teaspoonfuls make a very sweet and agreeable glass of extemporaneous lemonade.

1289. GINGER BEER.—White sugar, twenty pounds; lemon or lime juice, eighteen (fluid) ounces; honey, one pound, bruised ginger, twenty-two ounces; water, eighteen gallons. Boil the ginger in three gallons of water for half an hour, then add the sugar, the juice, and the honey, with the remainder of the water, and strain through a cloth. When cold add the white of one egg, and half an ounce (fluid) of essence of lemon; after standing four days, bottle. This yields a very superior beverage, and one which will keep for many months. (See 79.)

1290. TO TAKE STAINS OF WINE OUT OF LINEN.—Hold the articles in milk that is boiling on the fire, and the stains will soon disappear.

1291. DR. CLARK'S PILLS FOR NERVOUS HEADACHE.—Socotrine aloes, powdered rhubarb, of each one drachm; compound powder of cinnamon, one scruple; hard soap, half a drachm; syrup enough to form the mass. To be divided into fifty pills, of which two will be sufficient for a dose; to be taken occasionally.

1292. TO TAKE INK-STAINS OUT OF MAHOAGANY.—Put a few drops of spirits of nitre in a teaspoonful of water, touch the spot with a feather dipped in the mixture, and on the ink disappearing, rub it over immediately with a rag wetted in cold water, or there will be a white mark which will not be easily effaced.

1293. AN EFFECTUAL LIME FOR THE DESTRUCTION OF BUGS.—Two ounces of red arsenic, a quarter of a pound of white soap, half an ounce of camphor dissolved in a teaspoonful of spirits rectified, made into a paste of the consistency of cream: place this mixture

in the openings and cracks of the bedstead.

1294. MIXTURE FOR DESTROYING FLIES.—Infusion of quassia, one pint; brown sugar, four ounces; ground pepper, two ounces. To be well mixed together, and put in small shallow dishes when required.

1295. ERASMUS WILSON'S LOTION TO PROMOTE THE GROWTH OF THE HAIR.—Eau de Cologne, two ounces; tincture of cantharides, two drachms; oil of rosemary and oil of lavender; of each, ten drops.

1296. DR. SCOTT'S WASH TO WHITEN THE NAILS.—Diluted sulphuric acid, two drachms; tincture of myrrh, one drachm; spring water, four ounces. Mix. First cleanse with white soap, and then dip the fingers into the wash.

1297. CURE FOR CORNS.—Take two ounces of gum-ammoniac, two ounces of yellow wax and six drachms of verdigris, melt them together, and spread the composition on soft leather. Cut away as much of the corn as you can, then apply the plaster, and renew it every fortnight till the corn is away.

1298. DEAFNESS FROM DEFICIENT SECRETION OF WAX.—Take oil of turpentine, half a drachm; olive oil, two drachms. Mix. Two drops to be introduced into the ear at bed-time.

1299. TO RENOVATE BLACK CRAPE.—Skim-milk and water, with a little bit of glue in it, made scalding hot, will restore old rusty black Italian crape. If clapped and pulled dry, like fine muslin, it will look as good as new.

1300. SCOURING DROPS FOR REMOVING SPOTS, GREASE, &c., FROM LINEN OR ANY OTHER SUBSTANCE.—Take spirits of turpentine and essence of lemons, of each, one ounce. The essence must be newly made, or it will leave a circle round the spot.

1301. TO CLEAN MARBLE.—Take two parts of common soda, one part of pumice-stone, and one part of finely powdered chalk; sift it through a fine sieve, and mix it with water; then rub it well all over the marble, and the stains will be removed; then wash the

marble over with soap and water, and it will be as clean as it was at first.

1302. PAINT.—To get rid of the smell of oil paint plunge a handful of hay into a pailfull of water, and let it stand in the room newly painted.

1303. AN EXCELLENT JELLY. (FOR THE SICK ROOM).—Take rice, sago, pearl-barley, hartshorn shavings, each one ounce; simmer with three pints of water to one, and strain it. When cold it will be a jelly, of which give, dissolved in wine, milk, or broth, in change with the other nourishment.

1304. IMPRESSIONS FROM COINS.—Melt a little isinglass glue with brandy, and pour it thinly over the medal, &c., so as to cover its whole surface; let it remain on for a day or two, till it has thoroughly dried and hardened, and then take it off, when it will be fine, clear, and as hard as a piece of Muscovy glass, and will have a very elegant impression of the coin. It will also resist the effects of damp air, which occasions all other kinds of glue to soften and bend if not prepared in this way.

1305. TRAP FOR SNAILS.—Snails are particularly fond of bran; if a little is spread on the ground, and covered over with a few cabbage-leaves or tiles, they will congregate under them in great numbers, and by examining them every morning, and destroying them, their numbers will be materially decreased.

1306. TO DESTROY SLUGS.—Slugs are very voracious, and their ravages often do considerable damage, not only to the kitchen garden, but to the flower-beds also. If, now and then, a few slices of turnip be put about the beds, on a summer or autumnal evening, the slugs will congregate thereon, and may be destroyed.

1307. TO KEEP MOTHS, BEETLES, &c., FROM THE CLOTHES.—Put a piece of camphor in a linen bag, or some aromatic herbs, in the drawers, among linen or woollen clothes, and neither moth nor worm will come near them.

1308. TO CLEAR ROSE TREES FROM BLIGHT.—Take sulphur and tobacco dust in equal quantities, and strew it over

the trees of a morning when the dew is on them. The insects will disappear in a few days. The trees should then be syringed with a decoction of elder leaves.

1309. TO PREVENT MILDEW ON ALL SORTS OF TREES.—The best preventive against mildew is to keep the plant subject to it occasionally syringed with a decoction of elder leaves, which will prevent the fungus growing on them.

1310. TO DETECT COPPER IN PICKLES OR GREEN TEA.—Put a few leaves of the tea, or some of the pickle, cut small, into a phial with two or three drachms of liquid ammonia, diluted with one half the quantity of water. Shake the phial, when, if the most minute portion of copper be present, the liquid will assume a fine blue colour.

1311. OFFENSIVE BREATH.—For this purpose, almost the only substance that should be admitted at the toilette is the concentrated solution of chloride of soda. From six or ten drops of it in a wine glass full of pure spring water, taken immediately after the operations of the morning are completed.

1312. In some cases, the odour arising from carious teeth is combined with that of the stomach. If the mouth be well rinsed with a teaspoonful of the solution of the chloride in a tumbler of water, the bad odour of the teeth will be removed.

1313. TO PROTECT DAHLIAS FROM EARWIGS.—Dip a piece of wool or cotton in oil, and slightly tie it round the stalk, about a foot from the earth. The stakes which you will put into the ground to support your plants must also be surrounded by the oiled cotton or wool, or the insects will climb up them to the blossoms and tender tops of the stems.

1314. TO FREE PLANTS FROM LEAF-LICE.—M. Braun, of Vienna, gives the following as a cheap and easy mode of effecting it:—Mix one ounce of flowers of sulphur with one bushel of sawdust; scatter this over the plants infected with these insects, and they will soon be freed, though a second application may possibly be necessary.

1315. **TREATMENT OF WARTS.**—Pare the hard and dried skin from their tops, and then touch them with the smallest drop of strong acetic acid, taking care that the acid does not run off the wart upon the neighbouring skin, for if it do, it will occasion inflammation and much pain. If this practice be continued once or twice daily, *with regularity*, paring the surface of the wart occasionally, when it gets hard and dry, the wart may be soon effectually cured.

1316. **TO FATTEN FOWLS IN A SHORT TIME.**—Mix together ground rice well scalded with milk, and add some coarse sugar. Feed them with this in the daytime, but not too much at once: let it be pretty thick.

1317. **TO DISCOVER WHETHER BREAD IS ADULTERATED WITH ALUM.**—The bread must be soaked in water, and to the water in which it has been soaked, a little of the solution of muriate of lime must be added, upon which, if any alum be present, the liquid will be pervaded with milkiness; but if the bread be pure the liquid will remain limpid.

**Rationale:** sulphuric acid has a stronger affinity for lime than for the alumina and potass, with which it forms alum; it therefore quits those bodies to form sulphate of lime with the lime of the test, which produces the milkiness.

1318. **TO MAKE IMPRESSIONS OF LEAVES UPON SILK, SATIN, PAPER, OR ANY OTHER SUBSTANCE.**—Prepare two rubbers of wash-leather, made by tying up wool or any other substance in wash-leather; then prepare the colours which you wish the leaves to be, by rubbing up with cold-drawn linseed oil the colours you want, as indigo for blue, chrome for yellow, indigo and chrome for green, &c.; get a number of leaves the size and kind you wish to stamp, then dip the rubbers into the paint, and rub them one over the other, so that you may have but a small quantity of the composition upon the rubbers; place a leaf upon one rubber and moisten it gently with the other; take the leaf off and apply it to the substance you wish stamped; upon the leaf

place a piece of white paper, press gently, and there will be a beautiful impression of all the veins of the leaf. It will be as well if only one leaf be used one time. The leaves picked should be of one size, as otherwise the work will not look uniform.

1319. **TO EXTERMINATE BEETLES.**—1. Place a few lumps of unslaked lime where they frequent. 2. Set a dish or trap containing a little beer or syrup at the bottom, and place a few sticks slanting against its sides, so as to form a sort of gangway for the beetles to climb up by, when they will go headlong into the bait set for them. 3. Mix equal weights of red lead, sugar, and flour, and place it nightly near their haunts. This mixture made into sheets, forms the beetle wafers sold at the oil shops.

1320. **TO CLEAN HAIR BRUSHES.**—As hot water and soap very soon soften the hairs, and rubbing completes their destruction, use soda, dissolved in cold water, instead; soda having an affinity for grease, it cleans the brush with little friction. Do not set them near the fire, nor in the sun, to dry, but after shaking them well, set them on the point of the handle in a shady place.

1321. **TO CLEAN FRENCH KID GLOVES.**—Put the gloves on your hand and wash them, as if you were washing your hands, in some spirits of turpentine, until quite clean; then hang them up in a warm place, or where there is a current of air, and all smell of the turpentine will be removed. This method is practised in Paris, and since its introduction into this country, thousands of pounds have been gained by it.

1322. **EASY METHOD OF BREAKING GLASS TO ANY REQUIRED FIGURE.**—Make a small notch by means of a file on the edge of a piece of glass, then make the end of a tobacco-pipe, or of a rod of iron of the same size, red hot in the fire, apply the hot iron to the notch, and draw it slowly along the surface of the glass in any direction you please, a crack will follow the direction of the iron.

## 1323. ERRORS IN SPEAKING.

There are several kinds of errors in speaking. The most objectionable of them are those in which words are employed that are unsuitable to convey the meaning intended. Thus, a person wishing to express his intention of going to a given place, says, "I *propose* going," when, in fact, he *purposes* going. An amusing illustration of this class of error was overheard by ourselves. A venerable matron was speaking of her son, who, she said, was quite staggered. "In fact," remarked the old lady, "he is going to a *premature* performance this evening!" Considering that most *amateur* performers are *premature*, we hesitate to say that this word was misapplied; though, evidently, the maternal intention was to convey quite another meaning.

1324 Other errors arise from the substitution of sounds similar to the words which should be employed. That is, spurious words instead of genuine ones. Thus, some people say "*remunerative*," when they mean "*remunorative*." A nurse, recommending her mistress to have one of the newly-invented carriages for her child, advised her to purchase a *præcomputator*!

1325 Other errors are occasioned by imperfect knowledge of the English grammar. Thus, many people say, "Between you and *I*," instead of "Between you and *me*." By the misuse of the adjective: "What *beautiful* butter," "What a *nice* landscape." They should say, "What a *beautiful* landscape," "What *nice* butter." And by numerous other departures from the rules of grammar, which will be pointed out hereafter.

1326 By the mispronunciation of words. Many persons say *pronunciation* instead of *pronunciation*; others say *pron-un'-shun*, instead of *pron-un'-shun*.

1327 By the misdivision of words and syllables. This defect makes the words an *ambassador* sound like a *nam-bassador*, or an *adder* like a *nadder*.

1328 By the use of provincialisms, or words retained from various dialects, of which we give the following examples:

*Cambridgeshire, Cheshire, Dorset, &c.*  
1329. *Twopenny*, for *two pence*; *infect* for *sight*; *lemon* for *meat*; *pull* for *pull*.

*Cumberland, Scotland, &c.*  
1330. *Gull*, bluid, for *cool, blood*; *spwart*, seworn, whoam, for *spart, sworn, homey*—there for *there*; *8-red*, seworn, for *red, seven*; *bleedin* for *bleeding*; *hawt* for *hot*; *maumon* for *animal*.

*Devonshire, Cornwall, &c.*  
1331. *F-vind* for *find*; *fat for fash*; *wid* for *wish*; *zee* for *see*; *tudder* for *the other*; *draash*, *droo*, for *through, and through*; *gewwe* for *goose*; *Tuesday* for *Tuesday*.

*Essex, London, &c.*  
1332. *V-view* for *view*; *want* for *want*; *vite* for *white*; *van* for *when*; *vot* for *what*.

*Hertford, &c.*  
1333. *Clom* for *clim*; *hore* for *hoar*; *pick* for *pick*; *rop* for *rope*; *slidga* for *slide*.

*Leicestershire, Lincolnshire, Lancashire, &c.*  
1334. *Housen* for *houses*; *a-lyne* for *lane*; *mon* for *man*; *thick* for *thick*; *brig* for *bridge*; *thack*, *pick*, for *thick, pitch*.

*Yorkshire, &c.*  
1335. *Foyt* for *foot*; *foht* for *foht*; *o noits*, *foil*, *coil*, *hoil*, for *noits, foil, coal, hole*; *loyns* for *lane*; *seamin*, *geoin*, *fooil*, *tooil*, for *seam, geoin, foil, tool*; *spwart*, *severn*, *whoam*, for *spart, sworn, home*; *gyet* for *gate*.

1336. The following examples of

\* From Halliwell's *Dictionary of Anglo-Saxon and Provincial Words*.

provincial dialects will be found very amusing:—

*The Old Man's Story.*

An old man found, one day, a young gentleman's portmanteau, as he were a going to en dinner; he took it at en and gived it to en wife, and said "Mally, here's a roul of lither; look, see, I suppose some poor wald shoemaker or other have lost en, tak'en, and put'en a top of the taster of the bed, he'll be glad to hab'en agin some day, I dear say." The old man, Jan, that was en name, went to en work as before. Mally then opened the portmanteau, and found en at three hundred pounds. Some other then, the old man not being verry much, Mally said, "Jan, I've made a little money, by the bye, and I can't read or write, thee ain't a school" (he were then nigh three-and-ten). He went but a very short time, and come home one day and said, "Mally, I want go to school so more, 'cause the childer do be latten at me; they can tell their letters, and I can't tell my A, B, C, and I wud rather go to work agen." "Do as thee wud," ses Mally. Jan had not been out many days, afore the young gentleman came by that lost the portmanteau, and said, "Well, my ould man, did'ee see or hear tell o' sich a thing as a portmanteau?" "Portmanteau, sar, was't that en, sumthing like thickey!" (pointing to en behind en saddle). I wound one to the' day mackly like that." "Where as en?" "Come along, I can't en and go'en to my ould 'ooman, Mally; thee sha't aven, nevr year. Mally, where es that roul of lither I heerd en could thee to put en a top of the taster of the bed, afore I go'd to work?" "Drat thee emperance," said the young gentleman, "thee art bewitched, that were afore I were born." He he druv'd off, and left all the three hundred pounds with Jan an Mally.

*The Middleman Thimbletigger.*

1838. Now, then, my jolly sportsman, I've got more money than the parson of the parish. Those as don't play can't

win, and those as are here herat there I'd hold any en you, from a tanner to a sovereign, or ten, as you don't tell which thimble the pea is under." "It's there, Sir." "I berr tellings." "I'll go it again." "Vas you don't see don't look at, and vas you do see don't tell. I'll should you a sovereign, Sir, you don't tell me which thimble the pea is under." "Lay him, Sir, (in a whisper) it's under the middle 'un. I'll go you halves." "Lay him another; that's right." "I'm blow'd but we've lost; who'd a thought it!" Smack goes the stat's hat over his eyes; exit the confederates, with a loud laugh.

1839. *The Harnet and the Bittle.—*  
*Wiltshire.*

A harnet set in a hollow tree,—

A proper spiteful word was he;  
And a merrily sung while he did set  
His edg as sharp as a hagganet;

"Oh, who so vine and bewd as I,  
I years not bee, nor waspe, nor vly."

A bittle up thuck tree did clim,  
And scornfully did look at him;  
Zays he, "Zur harnet, who giv thee  
A right to set in thuck thore tree?  
Vor sel you sings so nation vine,  
I tell 'e'tis a house o' mine."

The harnet's conscience felt a twingo,  
But grawin' bowld wi his long stings,  
Zays he, "Possession's the best law;  
Zo here th' sha'nt put a claw!

Be off, and leave the tree to me,  
The miken's good enough for thee!"

Just then a yuckel passin' by,  
Was axed by them the cause to try:  
"Hal ha! I see how 'tis!" says he,  
"They'll make a famous munch vor me!"

His bill was shearp, his stomach lean,  
Zo up a snapped the caddin pair!

MORAL.

All you as be to law inclined,  
This teale stowry bear in mind;  
Vas if to law you aims to go,  
You'll find thy'll allus zar'e so:  
You'll meet the vate o' these here two,  
They'll take your ewout and en case too!

1840. Master Goddin used t' say as how childran costed a sight o' money as broog um up, and 'twas all very well whilst um was leetle, and zucked th'

mother, but when am begind to suck the vathan, 'twas nation akkard !

# Yorkshire.

1341. Men an' women is like no monny cards, played wif be two opponents, Time an' Eternity : Time gets a gam noo an' then, and hes t' pleasure o' keepin' his cards for a bit, bud Eternity's be far t'better hand, an' proves, day be day, an' hoor be hoor, 'at he's winnin in incalculably fast.

1342. "Hoo sweet, hoo varry sweet is life !" as t' fies said when he wur stuck i' treacle !

1343. Persons bred in these localities, and in Ireland and Scotland, retain more or less of their provincialisms ; and, therefore, when they move into other districts they become conspicuous for the peculiarities of their speaking. In many cases they appear vulgar and uneducated, when they are not so. It is, therefore, very desirable for all persons to approach the recognised standard of correctness as nearly as possible.

1344. To correct these errors by a systematic course of study, would involve a closer application than our readers generally could afford, and would require much more space than we can devote to the subject. We will therefore give numerous rules and hints, in a concise and simple form, which will be of great assistance to Enquirers.

1345. These Rules and Hints will be founded upon the authority of scholars, the usages of the bar, the pulpit, and the senate, and the authority of societies formed for the purpose of collecting and diffusing knowledge pertaining to the language of this country.

1346. *Who* and *whom* are used in relation to persons, and *which* in relation to things. But it was once common to say "the man *which*." This should now be avoided. It is now usual to say, "Our Father *who* art in heaven," instead of "*which* art in heaven."

1347. *Whose*, is, however, sometimes applied to things as to persons. We may, therefore, say, "the country *whose* inhabitants are free." [Grammarians

differ in opinion upon this subject, but general usage justifies the rule.]

1348. *Thou* is employed in solemn discourse, and you in common language. *Ye* (plural), is also used in serious addresses, and you, in familiar language.

1349. The uses of the word *It* are various, and very perplexing to the uneducated. It is not only used to imply persons, but things, and even ideas, and therefore, in speaking or writing, its assistance is constantly required. The perplexity respecting this word arises from the fact that in using it is the construction of a long sentence, sufficient care is not taken to ensure that when it is employed it really points out or refers to the object intended. For instance, "It was raining when John set out in his cart to go to the market, and he was delayed so long that it was over before he arrived." Now what is to be understood by this sentence ? Was the rain over ? or the market ? Either or both might be inferred from the construction of the sentence, which, therefore, should be written thus :—"It was raining when John set out in his cart, to go to the market, and he was delayed so long that the market was over before he arrived."

1350. *Rule*.—After writing a sentence always look through it, and see that wherever the word *It* is employed, it refers to or carries the mind back to the object which it is intended to point out.

1351. The general distinction between *This* and *That*, is, *this* denotes an object present or near, in time or place, *that* to be absent.

1352. *These* refers, in the same manner, to present objects, while *those* refers to things that are remote.

1353. *Who* changes, under certain conditions, into *whose* and *whom*, but *that* and *which* always retain the same.

1354. *That* may be applied to nouns or subjects of all sorts, as, the girl *that* went to school, the dog *that* bit me, the ship *that* went to London, the opinion *that* he entertains.

1355. The misuse of these pronouns

gives rise to more errors in speaking and writing than any other cause.

1356. When you wish to distinguish between two or more persons, say, "*Which* is the happy man?"—not *who*—"Which of those ladies do you admire?"

1357. Instead of "*Who* do you think him to be?"—Say, "*whom* do you think him to be?"

1358. *Whom* should I see?

1359. To *whom* do you speak?

1360. *Who* said so?

1361. *Who* gave it to you?

1362. *Of whom* did you procure them?

1363. *Who* was he?

1364. *Who* do men say that I am?

1365. *Whom* do they represent me to be?

1366. In many instances in which *who* is used as an interrogative, it does not become *whom*; as "*Who* do you speak to?" "*Who* do you expect?" "*Who* is she married to?" "*Who* is this reserved for?" "*Who* was it made by?" Such sentences are found in the writings of our best authors, and it would be presumptuous to consider them as ungrammatical. If the word *whom* should be preferred, then it would be best to say, "For *whom* is this reserved?" &c.

1367. Instead of "After *which* hour," say "After *that* hour."

1368. *Self* should never be added to *his*, *their*, *mine*, or *thine*.

1369. *Each* is used to denote every individual of a number.

1370. *Every* denotes all the individuals of a number.

1371. *Either* and *or* denote an alternative: "I will take *either* road, at your pleasure;" "I will take this *or* that."

1372. *Neither* means *not either*; and *nor* means *not other*.

1373. *Either* is sometimes used for *each*—"Two thieves were crucified, on *either* side one."

1374. "Let *each* esteem others as good as themselves," should be, "Let *each* esteem others as good as *himself*."

1375. "There are bodies *each* of which are so small," should be, "*each* of which is so small."

1376. Do not use double comparatives, such as *most straightest*, *most highest*, *most finest*.

1377. The term *worser* has gone out of use; but *lesser* is still retained.

1378. The use of such words as *chiefest*, *extremest*, &c., has become obsolete, because they do not give any superior force to the meanings of the primary words, *chief*, *extreme*, &c.

1379. Such expressions as *more impossible*, *more indispensable*, *more universal*, *more uncontrollable*, *more unlimited*, &c., are objectionable, as they really enfeeble the meaning which it is the object of the speaker or writer to strengthen. For instance, *impossible* gains no strength by rendering it *more impossible*. This class of error is common with persons who say, "A *great large* house," "A *great big* animal," "A *little small* foot," "A *tiny little* hand."

1380. *Here*, *there*, and *where*, originally denoting place, may now, by common consent, be used to denote other meanings; such as, "*There* I agree with you," "*Where* we differ," "We find pain *where* we expected pleasure," "*Here* you mistake me."

1381. *Hence*, *whence*, and *thence*, denoting departure, &c., may be used without the word *from*. The idea of *from* is included in the word *whence*—therefore it is unnecessary to say, "*From whence*."

1382. *Hither*, *thither*, and *whither*, denoting to a place, have generally been superseded by *here*, *there*, and *where*. But there is no good reason why they should not be employed. If, however, they are used, it is unnecessary to add the word *to*, because that is implied—"Whither are you going?" "Where are

\* Persons who wish to become well acquainted with the principles of *English Grammar*, by an easy process, are recommended to procure "The Useful Grammar," price 2d., published by Houlston and Wright, and all booksellers.

you going?" Each of these sentences is complete. To say, "Where are you going to?" is redundant.

1383. Two *negatives* destroy each other, and produce an affirmative. "*Nor did he not observe them,*" conveys the idea that he *did* observe them."

1384. But negative assertions are allowable. "His manners are not unpolite," which implies that his manners are, in some degree, marked by politeness.

1385. Instead of "I *had* rather walk," say "I would rather walk."

1385.\* Instead of "I *had better* go," say "It were better that I should go."

1386. Instead of "I doubt not *but* I shall be able to go," say "I doubt not that I shall be able to go."

1387. Instead of "Let you and I," say "Let you and me."

1388. Instead of "I am not so tall as *him*," say "I am not so tall as *he*."

1389. When asked "Who is there?" do not answer "*Me,*" but "*I.*"

1390. Instead of "For you and I," say "For you and me."

1391. Instead of "*Says I,*" say "I said."

1392. Instead of "You are taller than *me,*" say "You are taller than *I.*"

1393. Instead of "I *ayn't,*" or, "I *arn't,*" say "I am not."

1394. Instead of "Whether I be present or *no,*" say "Whether I be present or not."

1395. For "Not that I knows *on,*" say "Not that I know."

1396. Instead of "*Was* I to do so," say "Were I to do so."

1397. Instead of "I would do the same if I *was him,*" say "I would do the same if I *were he.*"

1398. Instead of "I *had as lief* go myself," say "I would as soon go myself," or "I would rather."

1399. It is better to say "Bred and born," than "Born and bred."

1400. It is better to say "Six weeks ago," than "Six weeks back."

1401. It is better to say "Since *which time,*" than "Since when."

1402. It is better to say "I repeated it," than "I said so over again."

1403. It is better to say "A physician," or "A surgeon" (according to his degree), than "A medical man."

1404. Instead of "He was too young to *have* suffered much," say "He was too young to suffer much."

1405. Instead of "*Less* friends," say "Fewer friends." *Less* refers to quantity.

1406. Instead of "A *quantity* of people," say "A number of people."

1407. Instead of "*H* and *they* we know," say "Him and them."

1408. Instead of "*As* far as I can see," say "So far as I can see."

1409. Instead of "If I am not *mis taken,*" say "If I mistake not."

1410. Instead of "You are *mistaken,*" say "You mistake."

1411. Instead of "What *beautiful* tea," say "What good tea."

1412. Instead of "What a *nice* prospect," say "What a *beautiful* prospect."

1413. Instead of "A *new pair* of gloves," say "A pair of new gloves."

1414. Instead of saying "*He* belongs to the *ship,*" say "The ship belongs to him."

1415. Instead of saying "*Not no* such thing," say "Not any such thing."

1416. Instead of "I hope you'll think nothing *on* it," say "I hope you'll think nothing of it."

1417. Instead of "Restore it *back* to me," say "Restore it to me."

1418. Instead of "I suspect the *veracity* of his story," say "I doubt the truth of his story."

1419. Instead of "I seldom or *ever* see him," say "I seldom see him."

1420. Instead of "*Rather warmish,*" or "A *little warmish,*" say "Rather warm."

1421. Instead of "I expected to *have* found him," say "I expected to find him."

1422. Instead of "*Shay,*" say "Chaise."

1423. Instead of "He is a very *rising* person," say "He is rising rapidly."

1424. Instead of "Who *learns* you

music," say "Who teaches you music?"

1425. Instead of "I *never* sing *when-*  
*ever* I can help it," say "I never sing  
when I can help it."

1426. Instead of "Before I do that I  
must *first* ask leave," say "Before I do  
that I must ask leave."

1427. Instead of "To *get over* the  
difficulty," say "To overcome the diffi-  
culty."

1428. The phrase, "*get over*," is in  
many cases misapplied, as, to "get over  
a person," to "get over a week," to  
"get over an opposition."

1429. Instead of saying "The *obser-*  
*vation* of the rule," say "The ob-  
servance of the rule."

1430. Instead of "A man of eighty  
years of age," say "A man eighty years  
old."

1431. Instead of "Here *lays* his  
honoured head," say "Here lies his  
honoured head."

1432. Instead of "He died from  
*negligence*," say "He died through  
neglect," or "in consequence of  
neglect."

1433. Instead of "Apples are plenty,"  
say "Apples are plentiful."

1434. Instead of "The *latter end* of  
the year," say "The end or the close of  
of the year."

1435. Instead of "The *then* govern-  
ment," say "The government of that  
age, or century, or year, or time."

1436. Instead of "For *ought* I know,"  
say, "For aught I know."

1437. Instead of "A *couple* of chairs,"  
say, "Two chairs."

1438. Instead of "*Two couples*," say  
"Four persons."

1439. But you may say "A married  
couple," or, "A married pair," or, "A  
couple of fowls," &c., in any case where  
one of each sex is to be understood.

1440. Instead of "They are *united*  
*together* in the bonds of matrimony,"  
say "They are united in matrimony,"  
or, "They are married."

1441. Instead of "We travel *slow*,"  
say "We travel slowly."

1442. Instead of "He is *noways* to

blame," say "He is *nowise* to be  
blamed."

1443. Instead of "He plunged *down*  
into the river," say "He plunged into  
the river."

1444. Instead of "He jumped *from*  
*off* of the scaffolding," say "He jumped  
off from the scaffolding."

1445. Instead of "He came the *last*  
of *all*," say "He came the last."

1446. Instead of "*universal*," with  
reference to things that have any limit,  
say "general;" "generally approved,"  
instead of "universally approved;"  
"generally beloved," instead of "uni-  
versally beloved."

1447. Instead of "They ruined *one*  
*another*," say "They ruined each  
other."

1448. Instead of "If *in case* I suc-  
ceed," say, "If I succeed."

1449. Instead of "A *large enough*  
room," say "A room large enough."

1450. Instead of "This villa *to let*,"  
say "This villa to be let."

1451. Instead of "I am slight in  
comparison to you," say "I am slight  
in comparison with you."

1452. Instead of "I went for to see  
him," say "I went to see him."

1453. Instead of "The cake is all *eat*  
*up*," say "The cake is all eaten."

1454. Instead of "It is bad *at the*  
*best*," say "It is very bad."

1455. Instead of "Handsome is *as*  
*handsome* does," say "Handsome is  
who handsome does."

1456. Instead of "As I *take* it," say  
"As I see," or, "As I understand it."

1457. Instead of "The book fell on  
the floor," say "The book fell to the  
floor."

1458. Instead of "His opinions are  
*approved of* by all," say "His opinions  
are approved by all."

1459. Instead of "I will add *one more*  
*argument*," say "I will add one argu-  
ment more," or, "another argument."

1460. Instead of "Captain Reilly  
was killed *by* a bullet," say "Captain  
Reilly was killed with a bullet."

1461. Instead of "A sad course is  
war," say "War is a sad curse."

1462. Instead of "He stands *six foot high*," say "He measures six feet," or, "His height is six feet."

1463. Instead of "I go *every now and then*," say "I go often, or frequently."

1464. Instead of "Who finds him in clothes," say "Who provides him with clothes."

1465. Say "The first two," and "the last two," instead of the "two first," "the two last;" leave out all expletives, such as "of all," "first of all," "last of all," "best of all," &c., &c.

1466. Instead of "His health was drunk with enthusiasm," say "His health was drunk enthusiastically."

1467. Instead of "Except I am prevented," say "Unless I am prevented."

1468. Instead of "In its *primary* sense," say "In its primitive sense."

1469. Instead of "It grieves me to see you," say "I am grieved to see you."

1470. Instead of "Give me *them* papers," say "Give me those papers."

1471. Instead of "Those papers I hold in my hand," say "These papers I hold in my hand."

1472. Instead of "I could scarcely imagine but *what*," say "I could scarcely imagine but that."

1473. Instead of "He was a man *notorious* for his benevolence," say "He was noted for his benevolence."

1474. Instead of "She was a woman *celebrated* for her crimes," say "She was notorious on account of her crimes."

1475. Instead of "What may your name be," say "What is your name?"

1476. Instead of "Bills are requested not to be stuck here," say "Billstickers are requested not to stick bills here."

1477. Instead of "By *smoking it often* becomes habitual," say "By smoking often it becomes habitual."

1478. Instead of "I lifted it *up*," say "I lifted it."

1479. Instead of "It is *equally of the same value*," say it is of the same value," or "equal value."

1480. Instead of "I knew it *previous* to your telling me," say "I knew it previously to your telling me."

1481. Instead of "You *was* out when I called," say "You were out when I called."

1482. Instead of "I thought I should *have won* this game," say "I thought I should win this game."

1483. Instead of "This much is certain," say "Thus much is certain," or "So much is certain."

1484. Instead of "He went away as it *may be* yesterday week," say "He went away yesterday week."

1485. Instead of "He came *the Saturday, as it may be before the Monday*," specify the Monday on which he came.

1486. Instead of "Put your watch in your pocket," say "Put your watch into your pocket."

1487. Instead of "He has *got* riches," say "He has riches."

1488. Instead of "Will you *set* down," say "Will you sit down?"

1489. Instead of "The hen is *setting*," say "The hen is sitting."

1490. Instead of "It is raining very *hard*," say "It is raining very fast."

1491. Instead of "No, *thank'ee*," say "No, thank you."

1492. Instead of "I cannot do it without *further* means," say "I cannot do it without further means."

1493. Instead of "No sooner *but*," or "No other *but*," say "than."

1494. Instead of "No *boddy else* but her," say "Nobody but her."

1495. Instead of "He fell *down* from the balloon," say "He fell from the balloon."

1496. Instead of "He rose *up* from the ground," say "He rose from the ground."

1497. Instead of "These kind of oranges are not good," say "This kind of oranges is not good."

1498. Instead of "Somehow or *another*," say "Somehow or other."

1499. Instead of "Un*deniable* references required," say "Unexceptionable references required."

1500. Instead of "I cannot *rise* sufficient funds," say "I cannot raise sufficient funds."

1501. Instead of "I cannot *raise* so

early in the morning," say "I cannot rise so early in the morning."

1502. Instead of "*Well*, I don't know," say "I don't know."

1503. Instead of "*Will* I give you some more tea?" say "Shall I give you some more tea?"

1504. Instead of "O, dear, what *will* I do," say "O, dear, what shall I do."

1505. Instead of "I think *indifferent* of it," say "I think indifferently of it."

1506. Instead of "I will send it *conformable* to your orders," say "I will send it conformably to your orders."

1507. Instead of "Give me a *few* broth," say "Give me some broth."

1508. Instead of "*Her* said it was hers," say "She said it was hers."

1509. Instead of "To be *given away gratis*," say "To be given away."

1510. Instead of "Will you enter in?" say "Will you enter?"

1511. Instead of "*This* three days, or more," say "These three days, or more."

1512. Instead of "He is a bad *gram-marian*," say "He is not a grammarian."

1513. Instead of "We *accuse him for*," say "We accuse him of."

1514. Instead of "We *acquit him from*," say "We acquit him of."

1515. Instead of "I am *averse from* that," say "I am averse to that."

1516. Instead of "I confide *on* you," say "I confide in you."

1517. Instead of "I differ *with* you," say "I differ from you."

1518. Instead of "As soon as *ever*," say "As soon as."

1519. Instead of "The *very best*," or "The *very worst*," say "The best or the worst."

1520. "Instead of "A *winter's morning*," say "A winter morning," or, "A wintry morning."

1521. Instead of "Fine morning, *this* morning," say "This is a fine morning."

1522. Instead of "How *do* you do?" say "How are you?"

1523. Instead of "Not so well as I could wish," say "Not quite well."

1524. Avoid such phrases as "No great shakes," "Nothing to boast of," "Down in my boots," "Suffering from the blues." All such sentences indicate vulgarity.

1525. Instead of "No one *cannot* prevail upon him," say "No one can prevail upon him."

1526. Instead of "No one *hasn't* called," say "No one has called."

1527. Avoid such phrases as "If I was you," or even, "If I were you." Better say "I advise you how to act."

1528. Instead of "You have a *right* to pay me," say "It is right that you should pay me."

1529. Instead of "I am going on a tour," say "I am about to take a tour," or "going."

1530. Instead of "I am going *over* the bridge," say "I am going *across* the bridge."

1531. Instead of "He is coming *here*," say "He is coming *hither*."

1532. Instead of "He lives opposite the square," say, "He lives opposite to the square."

1533. Instead of "He *belongs* to the Reform Club," say "He is a member of the Reform Club."

1534. Avoid such phrases as "I am up to you," "I'll be down upon you," "Cut," or "Mizzle."

1535. Instead of "I *should just* think I could," say "I think I can."

1536. Instead of "There has been a *good deal*," say "There has been much."

1537. Instead of "*Following up* a principle," say "Guided by a principle."

1538. Instead of "Your *obedient, humble servant*," say "Your obedient," or, "Your humble servant."

1539. Instead of saying "The effort you are making *for* meeting the bill," say "The effort you are making to meet the bill."

1540. Instead of saying "It *shall* be submitted to investigation and inquiry," say "It shall be submitted to investigation," or "to inquiry."

1541. Dispense with the phrase

"Conceal from themselves the fact." It suggests a gross anomaly.

1542. Never say "*Pure and unadulterated*," because the phrase embodies a repetition.

1543. Instead of saying "Adequate for," say "Adequate to."

1544. Instead of saying "A surplus over and above," say "A surplus."

1545. Instead of saying "A lasting and permanent peace," say "A permanent peace."

1546. Instead of saying "I left you behind at London," say "I left you behind me at London."

1547. Instead of saying "*Has been* followed by immediate dismissal," say "Was followed by immediate dismissal."

1548. Instead of saying "Charlotte was met *with* Thomas," say "Charlotte was met by Thomas." But if Charlotte and Thomas were walking together, "Charlotte and Thomas were met by," &c.

1549. Instead of "It is strange that no author should *never* have written," say "It is strange that no author should ever have written."

1550. Instead of "I won't never write," say "I will never write."

1551. To say "Do not give him *no more* of your money," is equivalent to saying "Give him some of your money." Say "Do not give him *any* of your money."

1552. Instead of saying "They are not what nature *designed* them," say "They are not what nature designed them to be."

1553. Instead of "By this *means*," say "By these means."

1554. Instead of saying "A beautiful *seat and gardens*," say "A beautiful seat and its gardens."

1555. Instead of "All that was *wanted*," say "All that was wanted."

1556. Instead of saying "I had not the pleasure of hearing his sentiments when I wrote that letter," say "I had not the pleasure of having heard," &c.

1557. Instead of "The quality of the apples *were* good," say "The quality of the apples was good."

1558. Instead of "The want of learning, courage, and energy *are* more visible," say "is more visible."

1559. Instead of "We are conversant *about* it," say "We are conversant with it."

1560. Instead of "We called at William," say "We called on William."

1561. Instead of "We die *for* want," say "We die of want."

1562. Instead of "He died *by* fever," say "He died of fever."

1563. Instead of "I *enjoy* bad health," say "My health is not good."

1564. Instead of "*Either* of the three," say "Any one of the three."

1565. Instead of "Better *nor* that," say "Better than that."

1566. Instead of "We often think *on* you," say "We often think of you."

1567. Instead of "Though he came, I did not see him," say "Though he came, yet I did not see him."

1568. Instead of "Mine is so good as yours," say "Mine is as good as yours."

1569. Instead of "He was remarkable handsome," say "He was remarkably handsome."

1570. Instead of "Smoke ascends *up* the chimney," say "Smoke ascends the chimney."

1571. Instead of "You will *some* day be convinced," say "You will one day be convinced."

1572. Instead of saying "Because I don't chose to," say "Because I would rather not."

1573. Instead of "*Because* why?" say "Why?"

1574. Instead of "That *there* boy," say "That boy."

1575. Instead of "Direct your letter to me," say "Address your letter to me."

1576. Instead of "The horse is not *much* worth," say "The horse is not worth much."

1577. Instead of "The *subject-matter* of debate," say "The subject of debate."

1578. Instead of saying "When he

was come back," say "When he had come back."

1579. Instead of saying "His health has been *shook*," say "His health has been *shaken*."

1580. Instead of "It was *spoke* in my presence," say "It was *spoken* in my presence."

1581. Instead of "*Very* right," or "*Very* wrong," say "Right," or "Wrong."

1582. Instead of "The *mortgager* paid him the money," say "The mortgagee paid him the money." The mortgagee lends; the mortgager borrows.

1583. Instead of "This town is not as large as we thought," say "This town is not so large as we thought."

1584. Instead of "I *took you* to be another person," say "I mistook you for another person."

1585. Instead of "On *either* side of the river," say "On *each* side of the river."

1586. Instead of "*There's* fifty," say "There are fifty."

1587. Instead of "The *best* of the two," say "The *better* of the two."

1588. Instead of "My clothes have become *too small* for me," say "I have grown too stout for my clothes."

1589. Instead of "Is Lord Palmerston *in*?" say "Is Lord Palmerston *within*?"

1590. Instead of "Two *spoonsful* of physic," say "Two *spoonfuls* of physic."

1591. Instead of "He *need* not do it," say "He *needs* not do it."

1592. Instead of "She *said*, says she," say "She *said*."

1593. Avoid such phrases as "I *said*, says I," "Thinks I to myself, thinks I,"

1594. Instead of "I don't think so," say "I think not."

1595. Instead of "He was in *eminent* danger," say "He was in *imminent* danger."

1596. Instead of "The weather is *hot*," say "The weather is *very* warm."

1597. Instead of "I *sweat*," say "I *perspire*."

1598. Instead of "I *only* want two shillings," say "I want only two shillings."

1599. Instead of "Whatsomever," say "Whatever," or "Whatsoever."

1600. Avoid such exclamations as "God bless me!" "God deliver me!" "By God!" "By Gor!" "My Lor!" "Upon my soul!" &c. (See 1761 to 1791.)

1601. "THOU SHALT NOT TAKE THE NAME OF THE LORD THY GOD IN VAIN."

1602. PRONUNCIATION. — Accent is a particular stress or force of the voice upon certain syllables or words. This mark ' in printing denotes the syllable upon which the stress or force of the voice should be placed.

1603. A WORD may have more than one accent. Take as an instance *as-pira-tion*. In uttering this word we give a marked emphasis of the voice upon the first and third syllables, and therefore those syllables are said to be accented. The first of these accents is less distinguishable than the second, upon which we dwell longer, therefore the second accent is called the primary, or chief accent of the word.

1604. WHEN the full accent falls on a vowel, that vowel should have a long sound, as in *vo'cal*; but when it falls on a consonant, the preceding vowel has a short sound, as in *hab'it*.

1605. To obtain a good knowledge of pronunciation, it is advisable for the reader to listen to the examples given by good speakers, and by educated persons. We learn the pronunciation of words, to a great extent, by *imitation*, just as birds acquire the notes of other birds which may be near them.

1606. BUT it will be very important to bear in mind that there are many words having a double meaning or application, and that the difference of meaning is indicated by the difference of the accent. Among these words, *nouns* are distinguished from *verbs* by this means: *Nouns* are accented on the first syllable, and verbs on the last.

1607. *Noun* signifies name; *verbs* are the names of persons and things:

as well as of things not material and palpable, but of which we have a conception and knowledge, such as *courage, firmness, goodness, strength*; and *verbs* express *actions, movements, &c.* If the word used signifies that anything has been done, or is being done, or is, or is to be done,—then that word is a *verb*.

1608. THUS, when we say that anything is “an in’sult,” that word is a *noun*, and is accented on the first syllable; but when we say he did it “to insult’ another person,” the word insult’ implies *acting*, and becomes a verb, and should be accented on the last syllable. The effect is, that, in speaking, you should employ a different pronunciation in the use of the same word, when uttering such sentences as these:—“What an in’sult!” “Do you mean to insult’ me?” In the first instance you would lay the stress of voice upon the *in’*, and in the latter case upon the *sult’*.

1609. WE will now give a list of nearly all the words that are liable to this variation:—

Ab’ject	To abject’
Ab’sent	To absent’
Ab’stract	To abstract’
Ac’cent	To accent’
Af’fix	To affix’
As’sign	To assign’
At’tribute	To attribute’
Aug’men’t	To augment’
Bom’bard	To bombard’
Col’league	To colleague’
Col’lect	To collect’
Com’pact	To compact’
Com’plot	To complot’
Com’pound	To compound’
Com’press	To compress’
Con’cert	To concert’
Con’crete	To concrete’
Con’duct	To conduct’
Con’fect	To confect’
Con’fine	To confine’
Con’flict	To conflict’
Con’serve	To conserve’
Con’sort	To consort’
Con’test	To contest’
Con’text	To context’
Con’tract	To contract’
Con’trast	To contrast’

Con’vert	To convert’
Con’verse	To converse’
Con’vert	To convert’
Con’vict	To convict’
Con’voy	To convoy’
Des’cant	To descant’
Des’ert	To desert’
De’tail	To detail’
Di’gest	To digest’
Dis’cord	To discord’
Dis’count	To discount’
Es’cort	To escort’
Es’say	To essay’
Ex’ile	To exile’
Ex’port	To export’
Ex’tact	To extract’
Fer’men’t	To ferment’
Fore’taste	To foretaste’
Fre’quent	To frequent’
Im’part	To impart’
Im’port	To import’
Im’press	To impress’
In’cense	To incense’
In’crease	To increase’
In’lay	To inlay’
In’sult	To insult’
Ob’ject	To object’
Per’fume	To perfume’
Per’mitt	To permit’
Pre’fix	To prefix’
Pre’mise	To premise’
Pre’sage	To presage’
Pres’ent	To present’
Pro’duce	To produce’
Pro’ject	To project’
Pro’test	To protest’
Reb’el	To rebel’
Rec’ord	To record’
Ref’use	To refuse’
Re’tail	To retail’
Sub’ject	To subject’
Sur’vey	To survey’
Tor’men’t	To torment’
Tra’ject	To traject’
Trans’fer	To transfer’
Trans’port	To transport’

1610. Cement’ is an exception to the above rule, and should always be accented on the last syllable. So also the word *consols’*.

1611. HINTS TO “COCKNEY” SPEAKERS. The most objectionable error of the Cockney, that of substituting the *v* for the

w, and *vice versa*, is, we believe, pretty generally abandoned. Such sentences as "Are you going to Vest Vickham?" "This is werry good weal," &c., were too intolerable to be retained. Moreover, there has been a very able schoolmaster at work during the past thirteen years. This schoolmaster is no other than the loquacious Mr. *Punch*, from whose works we quote a few admirable exercises:—

1. *Low Cockney*.—"Seen that party lately?" "What! the party with the wooden leg, as come with—" "No, no—not that party. The party, you know, as—" "Oh! Ah! I know the party you mean, now." "Well, a party told me as he can't agree with that other party, and he says that if another party can't be found to make it all square, he shall look out for a party as will."—(*And so on for half-an-hour.*)

2. *Police*.—"Lor, Soosan, how's a feller to eat meat such weather as this? Now, a bit o' pickled salmon and cow-cumber, or a lobster salad might do."

3. *Cockney Yachtsman*.—(Example of affectation).—Scene: the Regatta Ball.—"I say, Tom, what's that little craft with the black velvet flying at the fore, close under the lee scuppers of the man-of-war?" "Why, from he, fore and aft rig, and the cut of her mainsail, I should say she's down from the port of London; but I'll signal the commodore to come and introduce us!"

4. *Omnibus Driver*.—*Old Acquaintance*: "A've a drop, Bill?" *Driver*: "Why, yer see, Jim, this 'ere young boss has only bin in 'arness once afore, and he's such a beggar to bolt, ten to one if I leave 'im he'll be a-runnin' hoff, and a smashin' into suthun. Howsoever—here—(*handing reins to a timid passenger*)—lay hold, sir, I'LL CHANCE IT!"

5. *Costermonger* (to extremely genteel person).—"I say, guv'ner, give us a hist with this 'ere bilin' o' groens!" (A large hamper of market stuff).

6. *Genteel Cockney* (by the sea-side).—*Blanche*: "How grand, how solemn, dear Frederick, this is! I really think

the ocean is more beautiful under this aspect than under any other!"—*Frederick*: "Hm—ah! I'er-waps. By-the-way, *Blanche*—There's a fella shwimmin'. S'pose we ask him if he can get us some pwans for breakfast to-morrow mawnin'?"

7. *Stuck-up Cockney*.—(*Small Swell enters a tailor's shop*).—"A—Brown, A—want some more coats!" *Snip*: "Yes, sir. Thank you, sir. How many would you please to want?" *Small Swell*: "A—let me see; A—all have eight. A—no, I'll have nine; and look here! A—shall want some trousers." *Snip*: "Yos, sir, thank you, sir. How many would you like?" *Small Swell*: "A—I don't know exactly. S'pose we say twenty-four pairs; and look here! Show me some patterns that won't be worn by any snobs!"

8. *Cockney Flunkey*.—(*Country Footman meekly enquires of London Footman*).—"I'ray, sir, what do you think of our town? A nice place, ain't it?" *London Footman* (*condescendingly*): "Vell, Joseph, I likes your town well enough. It's clean; your streets are hairy; and you've lots of revins. But I don't like your champagne, it's all gewsberry!"

9. *Cockney Cabby* (*politely*).—"Beg pardon, sir; please don't smoke in the kob, sir; Ladies do complain o' the 'bacca uncommon. Better let me smoke it for yer outside, sir!"

10. *Military Cockney*.—*Lieutenant Blazer* (of the Plüngers).—"Gwood gwacious! Here's a howible go! The Infantwy's going to gwow a moustache!" *Cornet Huffle* (*whose face is whiskerless*).—"Yaw don't mean that! Wall! there's only one alternative for us. We must shave!"

11. *Juvenile low Cockney*.—"Jack! Whereabouts is 'Amstid-am?" *Jack*.—"Well, I can't say exackerly, but I know it's somewhere near 'Ampetid-'Fath!"

12. *Cockney Domestic*.—*Servant girl*.—"Well, mam—Heverythink considered, I'm afraid you von't suit me. I've always bin brought up genteel; and I

couldnt go nowheres where there ain't  
1 o ! notman kep'."

*Another.*—*Lady.*—"Wish to leave!  
why I thought, Thompson, you were  
very comfortable with me!" (*Thompson,*  
*who is extremely refined.*) "Ho yes, mum!  
I don't find no fault with you, mum—  
nor yet with master—but the truth *his,*  
mum—the *hother* servants is so 'orrid  
vulgar and hignorant, and speaks so  
hungrammatical, that I reely cannot live  
in the same 'ouse with 'em—and I should  
like to go this day month, if so be has  
it won't inconvenience you!"

13. *Cockney Waiter.*—"Am Sir?  
Yessir? Don't take anything with your  
'am, do you, sir?" *Gentleman.*—"Yes,  
I do; I take the letter H!"

14. *Cockney Hairdresser.*—"They  
say, sir, the cholera 'is in the Hair, sir!"  
*Gent (very uneasy).*—"Indeed! ahem!  
'Then I hope you're very particular  
about the brushes you use." *Hair-*  
*dresser.*—"Oh, I see, you don't 'un-  
derstand me, sir; I dont mean the 'air  
of the 'ed, but the hair *hof* the *hatmo-*  
*sphere*!"

15. *Cockney Sweep (scat'ed upon a*  
*donkey).*—"Fitch us out another  
pen'north o' strawberry hicc, with a  
dollop o' lemon water in it."

16. *Feminine Cockney (by the sea side.)*  
"Oh Harriette, dear, put on your hat  
and let us thee the stheamboato come in.  
The thea is tho rough!—and the people  
will be *tho* abthurdly thick!"

1613. LONDONERS who desire to cor-  
rect the defects of their utterance cannot  
do better than to exercise themselves  
frequently upon those words respecting  
which they have been in error.

1614. HINTS FOR THE CORRECTION OF  
THE IRISH BROGUE.—According to the  
directions given by Mr. B. H. Smart, an  
Irishman wishing to throw off the  
brogue of his mother country, should  
avoid hurling out his words with a super-  
fluous quantity of breath. It is not  
*broadher* and *widher* that he should say,  
but the *d*, and every other consonant  
should be neatly delivered by the  
tongue, with as little riot, clattering, or  
breathing as possible. Next let him

drop the roughness or rolling of the  
*r* in all places but the beginning of  
syllables: he must not say *stor-rum* and  
*far-rum*, but let the word be heard in  
one smooth syllable. He should exer-  
cise himself until he can convert *plaz*  
into *please*, *plinty* into *plenty*, *Jasus* into  
*Jesus*, and so on. He should modulate  
his sentences, so as to avoid directing  
his accent all in one manner—from the  
acute to the grave. Keeping his ear on  
the watch for good examples, and ex-  
ercising himself frequently upon them,  
he may become master of a greatly im-  
proved utterance.

1615. HINTS FOR CORRECTING THE  
SCOTCH BROGUE.—The same authority  
remarks that as an Irishman uses the  
closing accent of the voice too much, so  
a Scotchman has the contrary habit,  
and is continually drawling his tones  
from the grave to the acute, with an  
effect which, to southern ears, is sus-  
pensive in character. The smooth gut-  
teral *r* is as little heard in Scotland as  
in Ireland, the trilled *r* taking its place.  
The substitution of the former instead  
of the latter must be a matter of prac-  
tice. The peculiar sound of the *u*,  
which in the north so often borders on  
the French *u*, must be compared with  
the several sounds of the letter as they  
are heard in the south; and the long  
quality which a Scotchman is apt to  
give to the vowels that ought to be es-  
sentially short, must be clipped. In  
fact, aural observation and lingual ex-  
ercise are the only sure means to the  
end; so that a Scotchman going to a  
well for a bucket of water, and finding  
a countryman bathing therein, would  
not exclaim, "Hey, Colin, dinna ye ken  
the watter's for drink, and nae for  
bathin?"

1616. OF PROVINCIAL BROGUES it is  
scarcely necessary to say much, as the  
foregoing advice applies to them. One  
militia man exclaimed to another, "Jim,  
you bain't in step." "Bain't I," ex-  
claimed the other, "Well, change  
yourn!" Whoever desires knowledge  
must strive for it. It must not be dis-  
pens'd with after the fashion of Tuna-

mus and Jim, who held the following dialogue upon a vital question:—*Tum-mus*—"I zay, Jim, be you a purtectionist?" *Jim*—"E'as I be." *Tum-mus*—"Wall I zay, Jim, what be purtection?" *Jim*—"Loa'r, Tum-mus, do'ant 'ee knaw?" *Tum-mus*—"Naw, I doan't." *Jim*—"Wall, I doan't knaw as I can tell 'ee, Tum-mus, *vur I doan't ezakterly knaw n:ysel'!*"

### 1617. RULES OF PRONUNCIATION.

1618. C before *a*, *o*, and *u*, and in some other situations, is a close articulation, like *k*. Before *e* *i* and *y*, *c* is precisely equivalent to *s* in *same*, *this*, as in *cedar*, *civil*, *cypress*, *capacity*.

1619. E final indicates that the preceding vowel is long, as in *hate*, *mete*, *sire*, *robe*, *lyre*, *abate*, *recede*, *invite*, *re-ruote*, *intrude*.

1620. E final indicates that *c* preceding has the sound of *s*, as in *lace*, *lance*; and that *g* preceding has the sound of *j*, as in *charge*, *page*, *challenge*.

1621. E final, in proper English words, never forms a syllable, and in the most used words, in the terminating unaccented syllable, it is silent. Thus, *motive*, *genuine*, *examine*, *juvenile*, *reptile*, *granite*, are pronounced *motiv*, *genuin*, *examin*, *juvenil*, *reptil*, *granit*.

1622. E final, in a few words of foreign origin, forms a syllable, as *syncope*, *simile*.

1623. E final is silent after *l* in the following terminations, *ble*, *cle*, *dle*, *fle*, *gle*, *kle*, *ple*, *tle*, *zle*; as in *able*, *manacle*, *cradle*, *ruffle*, *mangle*, *wrinkle*, *supple*, *rattle*, *puzzle*, which are pronounced *abl*, *man'acl*, *crad'l*, *ruf'l*, *man'gl*, *wrinkl*, *sup'pl*, *puz'z*.

1624. E is usually silent in the termination *en*, as in *token*, *broken*; pronounced *tokn*, *brokn*.

1625. OUS in the termination of adjectives and their derivatives is pronounced *us*, as in *gracious*, *pious*, *pompously*.

1626. CE, CI, TI, before a vowel, have the sound of *sh*; as in *cetaceous*, *gracious*, *motion*, *partial*, *ingrati-ate*,

pronounced *cetashus*, *grachus*, *moshon*, *parshal*, *ingrashiate*.

1627. TI, after a consonant, have the sound of *ch*, as in *Christian*, *bastion*; pronounced *Chrischan*, *baschan*.

1628. SI, after an accented vowel, are pronounced like *zh*, as in *Ephesian*, *confusion*; pronounced *Epheshan*, *confu-zhan*.

1629. When CI or TI precede similar combinations, as in pronunciation, negotiation, they may be pronounced *ce*, instead of *she*, to prevent a repetition of the latter syllable; as *pronunciation*, instead of *pronunsheashun*.

1630. GH, both in the middle and at the end of words are silent; as in *caught*, *bought*, *fright*, *night*, *sigl*; pronounced *cant*, *baut*, *frite*, *ni*, *st*. In the following exceptions, however, GH are pronounced as *F*:—*cough*, *chough*, *clough*, *enough*, *laugh*, *rough*, *slough*, *tough*, *trough*.

1631. When WH begin a word, the aspirate *h* precedes *w* in pronunciation; as in *what*, *whiff*, *whale*; pronounced *hwat*, *hwiff*, *hwale*, *w* having precisely the sound of *oo*; French *ou*. In the following words *w* is silent:—*who*, *whom*, *whose*, *whoop*, *whole*.

1632. H after *r* has no sound or use; as in *rheum*, *rhyme*; pronounced *reum*, *ryme*.

1633. H should be sounded in the middle of words; as in *forehead*, *abhor*, *behold*, *exhaust*, *inhabit*, *unhorse*.

1634. H should always be sounded except in the following words:—*heir*, *herb*, *honest*, *honour*, *hospital*, *hostler*, *hour*, *humour*, and *humble*, and all their derivatives;—(See 161)—such as *humourously*, derived from *humour*.

1635. K and G are silent before *n*; as *know*, *gnaw*; pronounced *no*, *naw*.

1636. W before *r* is silent; as in *wring*, *wreath*; pronounced *ring*, *reath*.

1637. B after *m* is silent; as in *dumb*, *numb*; pronounced *dum*, *num*.

1638. L before *k* is silent; as in *baulk*, *walk*, *talk*; pronounced *bauk*, *wauk*, *tauik*. (See 1663.)

1639. PH have the sound of *f*; as in *philosophy*; pronounced *filosophy*.

1640. NG has two sounds; one as in *singer*—the other as in *finger*.

1641. N after m, and closing a syllable, is silent, as in *hymn*, *condemn*.

1642. P before c and t is mute, as in *psalm*, *pseudo*, *ptarmigan*; pronounced *salm*, *sudo*, *tarmigan*.

1643. R has two sounds, one strong and vibrating, as at the beginning of words and syllables, such as *robber*, *reckon*, *error*; the other as at the terminations of words, or when it is succeeded by a consonant, as *farmer*, *morn*.

1644. Before the letter R there is a slight sound of e between the vowel and the consonant. Thus, *bare*, *parent*, *apparent*, *mere*, *wire*, *more*, *pure*, *pyre*, are pronounced nearly *baer*, *paerent*, *appaerent*, *me-er*, *wier*, *moer*, *puer*, *pyer*. This pronunciation proceeds from the peculiar articulation r, and it occasions a slight change of the sound of a, which can only be learned by the ear.

1645. There are other rules of pronunciation affecting the combinations of vowels, &c.; but as they are more difficult to describe, and as they do not relate to errors which are commonly prevalent, we shall content ourselves with giving examples of them in the following list of words.

#### 1646. WORDS WITH THEIR PRONUNCIATIONS.

Again, a-gen, not a spelled.

Alien, aly-en, not a-lye-n.

Antipodes, an-tip-o-dees,

Apostle, without the t.

Arch, *arch* in compounds of our own language, as in *archbishop*, *archduke*; but *ark* in words derived from the Greek, as *archaic*, ar-ka-ik; *archæology*, ar-ke-ol-o-zy; *archangel*, ark-ain-gel; *archetype*, ar-ke-type; *archiepiscopal*, ar-ke-e-pis-copal; *archipelago*, ar-ke-pel-a-go; *archives*, ar-kivz; &c.

Asla, asha.

Asparagus, not asparagras

Awkward, awk-wurd, not awk-wurd.

Bade, bad.

Because, be-cause, not be-see.

Been, bin.

Beloved, as a verb, be-loved; as an adjective,

be-luv-ed. Blessed, cursed, &c., are subject to the same rule.

Beneath, with the th in breath, not with the th in breathe.

Biography, as spelled, not biogeography.

Buoy, bwoy, not boy.

By and my, in conversation, b'e, m'e. When emphatic, 'nd in poetic reading, by and my.

Cannal, as spelled, not ca-nel.

Caprice, capreece.

Catch, as spelled, not ketch.

Chaos, ka-oss.

Charlatan, sharlatan.

Chasm, kazm.

Chasten, chasn.

Chivalry, shivalry.

Chemistry, kim-is-trey.

Choir, kwire.

Clerk, klark.

Combat, kum-bat.

Conduit, kum-dit.

Corps, core; plural, cores.

Covetous, kuv-e-tus, not kuv-e-chus.

Courteous, curt-yus.

Courtesy (politeness) cur-ta-sey.

Courtesy (a lowering of the body), curt-sey.

Cresses, as spelled, not creeses.

Curiosity, cu-re-ös-e-ty, not curiosity,

Cushion, coosh-an, not coosh-in.

Daunt, dānt, not dawnt.

Design and desist have the sound of s, not of z.

Desire should have the sound of z.

Despatch, de-spatch, not des-patch.

Dew, due, not doo.

Diamond, as spelled, not di-mond.

Diploma, de-plo-ma, not dip-lo-ma.

Diplomacy, de-plo-ma-cy, not dip-lo-ma-cy.

Direct, de-rect, not di-rect.

Divers (several), di-verz; but diverse (different), di-verso.

Dome, as spelled, not doom,

Drought, drowt, not drawt.

Duke, as spelled, not dook.

Dynasty, dyn-as-te, not dy-nas-ty.

Edict, e-dickt, not ed-ickt.

E'en and e'er, een and air.

Egotism, eg-o-tizm, not e-go-tism.

Either, e-ther, not t-ther.

Engine, en-jin, not in-jin.

Ensign, en-sign; ensigncy, en-sin-cy.

Epistle, without the t.

Epitome, e-pit-o-me.

Epoch, ep-ock, not e-pock.

Equinox, eq-kwe-nox, not e-qul-nox.

Europe, U-rope, not U-rup. Euro-pe-an, not Ku-ro-pean.

Every, ev-er-ey, not ee-ry.

Escentor, *es-sen-see*, not with the sound of *s*.  
Extraordinary, *ex-tror-de-nar-ey*, not *ex-tra-ordinary*, nor *extronarey*.

February, as spelled, not *Febuary*.

Finance, *fe-nance*, not *financee*.

Foundling, as spelled, not *fund-ling*.

Garden, *gar-den*, not *gar-den*, nor *gard-ing*.

Gawtlet, *gawt-let*, not *gawnt-let*.

Geography, as spelled, not *gography*, nor *ge-hography*.

Geometry, as spelled, not *gom-etry*.

Haunt, *hant*, not *hawnt*.

Height, *hite*, not *high*.

Heinous, *hay-nus*, not *hee-nus*.

Highland, *hi-land*, not *hee-land*.

Horizon, *ho-re-zen*, not *hor-i-zen*.

Housewife, *hus-wif*.

Hymeneal, *hy-men-e-al*, not *hy-men-al*.

Instead, *in-sted*, not *instid*.

Isolate, *is-o-late*, not *i-to-late*, nor *te-clate*.

Jalap, *jel-ap*, not *jolup*.

January, as spelled, not *Jennary*, nor *Janewary*.

Leave, as spelled, not *leaf*.

Legend, *led-gend*, not *le-gend*.

Lieutenant, *lev-ten-ant*, not *leu-ten-ant*.

Many, *man-nay*, not *man-ny*.

Marchioness, *mar-shan-ess*, not as spelled.

Massacre, *mas-sa-car*, not *mas-sa-cre*.

Mattress, as spelled, not *mat-tress*.

Matron, *ma-trun*, not *mas-tron*.

Medicine, *med-e-cin*, not *med-cin*.

Minute (sixty seconds) *men-it*.

Minute (small) *mi-nute*.

Miscellany, *mis-cellany*, not *mis-col-lary*.

Mischievous, *mis-chiv-us*, not *mis-cheev-us*.

Ne'er, for never, *nare*.

Neighbourhood, *nay-bur-hood*, not *nay-bur-wood*.

Nephew, *ner-u*, not *nef-u*.

New, *nu*, not *noo*.

Notable, worthy of notice, *no-ta-bl*.

Notable, thrifty, *not-a-bl*.

Oblige, as spelled, not *obleege*.

Oblique, *ob-lee*, not *o-blie*.

Odorous, *o-dur-us*, not *od-ur-us*.

Of, or, except when compounded with there, here, and where, which should be pronounced *here-of*, *there-of*, and *where-of*.

Off, not *awf*.

Organisation, *or-gan-e-sa-shun*, not *or-ga-ni-sa-shun*.

Ostrich, *os-trich*, not *os-tridge*.

Pagant, *pag-jant*, not *pa-jant*.

Parent, *pare-ant*, not *par-ent*.

Partisan, *par-te-san*, not *par-te-ssan*, nor *par-ti-san*.

Patent, *pat-ant*, not *pa-tent*.

Physiognomy, not *physiognomy*.

Pincers, *pin-cers*, not *planch-ers*.

Plaintiff, as spelled, not *plam-iff*.

Pour, *pore*, not so as to rhyme with our.

Precedent, (an example,) *pre-sa-dent*; *pre-sa-dent* is the pronunciation of the adjective.

Prologue, *pro-log*, not *pro-loga*.

Quadrille, *ka-dril*, not *quod-til*.

Quay, *key*, not as spelled.

Radish, as spelled, not *rod-ish*.

Railery, *rat-ier-ry*, not as spelled.

Rather, not *raasther*.

Resort, *resort*.

Resound, *rezound*.

Respite, *res-pit*, not as spelled.

Rout (a party; and to rout,) should be pronounced *rowt*. Route (a road), *root*.

Saunter, *saw-ter*, not *sawn-ter*.

Sausage, *saw-sage*, not *soo-idge*, nor *sas-sage*.

Schedule, *shed-ule*, not *shed-die*.

Seamstress, *sem-stress*.

Sever, *soor*, not *shore*, nor *share*.

Shire, *sheer*, not as spelled.

Shone, *shon*, not *shun*, nor as spelled.

Soldier, *sole-jer*.

Solecism, *sol-e-cizm*, not *so-lo-cizm*.

Soot, as spelled, not *sut*.

Sovereign, *sov-er-in*, not *soy-er-in*.

Specious, *spe-shus*, not *speah-us*.

Stomacher, *stem-a-cher*.

Stone, (weight,) as spelled, not *stun*.

Synod, *syn-ud*, not *sy-nod*.

Tenure, *ten-ure*, not *te-nure*.

Tenet, *ten-et*, not *te-net*.

Than, as spelled, not *thun*.

Tremor, *tem-ur*, not *tre-mor*.

Twelfth, should have the *th* sounded.

Umbrel la, as spelled, not *um-ber-el-la*.

Vase, *vasa*, not *vawza*.

Was, *waz*, not *wuz*.

Weary, *wee-ry*, not *wary*.

Were, *wer*, not *wafe*.

Wont, *wunt*, not as spelled.

Wrath, *rawth*, not *roth*: as an adjective it is spelled *wroth*, and pronounced with the vowel sound shorter, as *writh'-fal*, &c.

Yacht, *yot*, not *yat*.

Yeast, as spelled, not *yest*.

Zenith, *sem-ith*, not *se-nith*.

Zediko, *so-de-ak*.

Zoology should have both o's sounded, as *so-ol-o-gy*, not *soo-lo-gy*.

#### PRONOUNS—

—acc, not *ias*, as *furnace*, not *furnais*.

—age, not *idge*, as *cabbage*, *courage*, *postage*, *village*.

—ain, *ane*, not *in*, as *certain*, *certaine*, *that*.

- ate, not it, as moderate, not moderat;
- ct, not c, as aspect, not aspec; subject, not subjec.
- ed, not id. or ud, as wicked, not wickid, or wickud.
- el, not l, model, not modl; novel, not neel.
- en, not n, as sudden, not suddn.—Barden, burthen, garden, lengthen, seven, strengthen, often, and a few others, have the s silent.
- once, not unce, as influence, not influ-unes.
- es, not is, as please, not please.
- ile, should be pronounced il, as fertil, not fertil, in all words except chamomile (*cam*), exile, gentile, infantile, reconcile, and simile, which should be pronounced ilo.
- in, not n, as Latin, not Latn.
- nd, not n, as husband, not husban; thousand, not thousan.
- ness, not niss, as carefulness, not carefulness.
- ng, not n, as singing, not singis; speaking, not speakn.
- ngth, not nth, as strength, not strenth.
- son, the o should be silent, as in treason, treason, not tre-son.
- tal, not tle, as capital, not capitle; metal, not mettles; mortal, not mortle; periodical, not periodicle.
- xt, not x, as next, not nex.

1647. PUNCTUATION. — Punctuation teaches the method of placing *Points*, in written or printed matter, in such a manner as to indicate the pauses which would be made by the author if he were communicating his thoughts orally instead of by written signs.

1648. Writing and printing are substitutes for oral communication; and correct punctuation is essential to convey the meaning intended, and to give due force to such passages as the author may wish to impress upon the mind of the person to whom they are being communicated.

1649. The *Points* are as follow:—

- The Comma ,
- The Semicolon ;
- The Colon :
- The Period, or Full Point .
- The Apostrophe '.
- The Hyphen, or Conjoiner -
- The Note of Interrogation ?
- The Note of Exclamation !
- The Parenthesis ( )
- The Asterisk or Star \*

As these are all the points required in simple epistolary composition, we will

confine our explanation to the rules which should govern the use of them.

1650. But we will first state that the other points are the paragraph ¶; the section §; the dagger †; the double dagger ‡; the rule —; the parallel ¶; the bracket [ ]; and some others. These, however, are quite unnecessary, except for elaborate works, and in these they are chiefly used for notes or marginal references.

1651. The comma , denotes the shortest pause; the semicolon ; a little longer pause than the comma; the colon : a little longer pause than the semicolon; the period, or full point, . the longest pause.

1652. The relative duration of these pauses is described as—

	While you count
Comma . . . . .	One
Semicolon . . . . .	Two
Colon . . . . .	Three
Period . . . . .	Four.

This, however, is not an infallible rule, because the duration of the pauses should be regulated by the degree of rapidity with which the matter is being read. In slow reading, the duration of the pauses should be increased.

1653. The other points are rather indications of expression, and of meaning, and connection, than of pauses, and therefore we will notice them separately.

1654. The misplacing of even so slight a point, or pause, as the comma, will often alter the meaning of a sentence. The contract made for lighting the town of Liverpool, during the year 1819, was thrown void by the misplacing of a comma in the advertisements—thus:—"The lamps at present are about 4050, and have in general two spouts each, composed of not less than twenty threads of cotton." The contractor would have proceeded to furnish each lamp with the said twenty threads; but this being but half the usual quantity, the commissioners discovered that the difference arose from the comma following instead of preceding the word

*each.* The parties agreed to annul the contract, and a new one was ordered.

1655. The following sentence shows how difficult it is to read without the aid of the points used as *pauses* :—

Death waits not for storm, or sunshine within a dwelling in one of the upper streets respectable in appearance and furnished with such conveniences as distinguish the habitations of those who rank among the higher classes of society a man of middle age lay on his last bed momentarily awaiting the final summons all that the most skilful medical attendance all that love warm as the glow that fires an angel's bosom could do had been done by day and night for many long weeks had ministering spirits such as a devoted wife and loving children are done all within their power to ward off the blow but there he lay his raven hair smoothed off from his noble brow his dark eyes lighted with unnatural brightness and contrasting strongly with the pallid hue which marked him as an expectant of the dread messenger.

1656. The same sentence, properly pointed, and with capital letters placed after full points, according to the adopted rule, may be easily read and understood :—

Death waits not for storm or sunshine. Within a dwelling in one of the upper streets, respectable in appearance, and furnished with such conveniences as distinguish the habitations of those who rank among the higher classes of society, a man of middle age lay on his last bed, momentarily awaiting the final summons. All that the most skilful medical attendance—all that love, warm as the glow that fires an angel's bosom, could do, had been done; by day and night, for many long weeks, had ministering spirits, such as a devoted wife and loving children are, done all within their power to ward off the blow. But there he lay, his raven hair smoothed off from his noble brow, his dark eyes lighted with unnatural brightness, and contrasting strongly with the pallid hue which marked him as an expectant of the dread messenger.

1657. The apostrophe ' is used to indicate the combining of two words in one—as *John's book*, instead of *John, his book*; or to show the omission of parts of words, as *Glo'ster*, for *Gloucester*—*tho'* for *though*. These abbreviations should be avoided as much as possible. Cobbett says the apostrophe "ought

to be called the mark of *business* and *vulgarity*." The first use, however, of which we gave an example, is a necessary and proper one.

1658. The hyphen, or conjoiner - is used to unite words which, though they are separate and distinct, have so close a connection as almost to become one word, as *water-rat*, *wind-mill*, &c. It is also used in writing and printing, at the end of a line, to show where a word is divided and continued in the next line. Look down the ends of the lines in this column, and you will notice the hyphen in several places.

1659. The note of interrogation ? indicates that the sentence to which it is put asks a question, as "What is the meaning of that assertion? What am I to do?"

1660 The note of exclamation or of admiration ! indicates surprise, pleasure, or sorrow, as "Oh! Ah! Goodness! Beautiful! I am astonished! Woe is me!"

1661. The parenthesis ( ) is used to prevent confusion by the introduction to a sentence, of a passage not necessary to the sense thereof. "I am going to meet Mr. Smith (though I am no admirer of him) on Wednesday next." It is better, however, as a rule, not to employ parenthetical sentences.

1662. The asterisk, or star \* may be employed to refer from the text to a note of explanation at the foot of a column, or at the end of a letter. \* \* Three stars are sometimes used to call particular attention to a paragraph.

1663. HINTS UPON SPELLING.—The following rules will be found of great assistance in writing, because they relate to a class of words about the spelling of which doubt and hesitation are frequently felt :—

1664. All words of one syllable ending in *l*, with a single vowel before it, have double *l* at the close: as, *mill*, *sell*.

1665. All words of one syllable ending in *l*, with a double vowel before it, have one *l* only at the close; as, *mail*, *sail*.

1666. Words of one syllable ending in *l*, when compounded, retain but one *l* each; as, *fulfil*, *skilful*.

1667. Words of more than one syllable ending in *l* have one *l* only at the close; as, *delightful*, *faithful*; except *befall*, *downfall*, *recall*, *unwell*, &c.

1668. All derivations from words ending in *l* have one *l* only; as *equality*, from *equal*; *fullness*, from *full*; except they end in *er* or *ly*; as *mill*, *miller*; *full*, *fully*.

1669. All participles in *ing* from verbs ending in *e* lose the *e* final; as *have*, *having*; *amuse*, *amusing*; unless they come from verbs ending in double *e*, and then they retain both; as, *see*, *seeing*; *agree*, *agreeing*.

1670. All adverbs in *ly* and nouns in *ment* retain the *e* final of the primitives; as, *brave*, *bravely*; *refine*, *refinement*; except *acknowledgment* and *judgment*.

1671. All derivations from words ending in *er* retain the *e* before the *r*; as, *refer*, *reference*; except *hindrance*, from *hinder*; *remembrance* from *remember*; *disastrous*, from *disaster*; *monstrous*, from *monster*; *wondrous* from *wonder*; *cumbrous* from *cumber*, &c.

1672. Compound words, if both end not in *l*, retain their primitive parts entire; as, *millstone*, *changeable*, *raceless*; except *always*, *also*, *deplorable*, *although*, *almost*, *admirable*, &c.

1673. All one-syllables ending in a consonant, with a single vowel before it, double that consonant in derivatives; as, *sin*, *sinner*; *ship*, *shipping*; *big*, *bigger*; *glad*, *gladder*, &c.

1674. One-syllables ending in a consonant, with a double vowel before it, do not double the consonant in derivatives; as, *sleep*, *sleepy*; *troop*, *trooper*.

1675. All words of more than one syllable ending in a single consonant, preceded by a single vowel, and accented on the last syllable, double that consonant in derivatives; as *commit*, *committees*; *compel*, *compelled*; *appal*, *appalling*; *distil*, *distiller*.

1676. Nouns of one syllable ending

in *y*, preceded by a consonant, change *y* into *ies* in the plural; and verbs ending in *y*, preceded by a consonant, change *y* into *ies* in the third person singular of the present tense, and into *ied* in the past tense and past participle; as, *fly*, *flies*; *I apply*, *he applies*; *we reply*, *we replied* or *have replied*. If the *y* be preceded by a vowel, this rule is not applicable; as, *key*, *keys*; *I play*, *he plays*; *we have enjoyed* ourselves.

1677. Compound words whose primitives end in *y* change *y* into *i*; as *beauty*, *beautiful*; *lovely*, *loveliness*.

1678. QUADRILLES.—THE FIRST SET.

1679. *Figure 1. Le Pantalon*.—Right and left. Balancez to partners: turn partners. Ladies chain. Half promenade: half right and left. (Four times.)

1680. *Figure 2. L'ete*.—Leading lady and opposite gentleman advance and retire; chassez to right and left. Cross over to each other's places: chassez to right and left. Balancez and turn partners. (Four times.)

1681. *Or Double L'ete*.—Both couples advance and retire at the same time; cross over; advance and retire again; cross to places, balancez and turn partners. (Four times.)

1682. *Figure 3. La Poule*.—Leading lady and opposite gentleman cross over, giving right hands; recross, giving left hands, and fall in a line. Set, four in a line; half promenade. Advance two, and retire (twice). Advance four, and retire: half right and left. (Four times.)

1683. *Figure 4. Trenise*.—The first couple advance and retire twice, the lady remaining on the opposite side, the two ladies go round the first gentleman, who advances up the centre, balancez and turn hands. (Four times.)

1684. *Figure 5. La Pastorale*.—The leading couple advance twice, leaving the lady opposite the second time. The three advance and retire twice. The leading gentleman advance and set.

\* This or the Trenise must be omitted.

Hands four half round : half right and left. \* (Four times.)

1685. *Figures 6. Galop Finaie.*—Top and bottom couples galopade quite round each other—advance and retire, four advances again and change the gentlemen—ladies' chain—advance and retire four, and regain your partners in your places—the fourth time all galopade for an unlimited period. (Four times.)

Or, all galopade or promenade eight bars, advance four *en galop oblique*, and retire, then half promenade, eight bars, advance four, retire and return to places with the half promenade, eight bars. Ladies' chain, eight bars. Repeated by the side couples, then by the top and bottom, and lastly by the side couples, finishing with grand promenade.

1686. *LANCERS.*—*La Rose.*—First gentleman and opposite lady advance and set—turn with both hands, retiring to places—return, leading outside—set and turn at corners.

1687. *La Lodoiska.*—First couple advance twice, leaving the lady in the centre. Set in the centre—turn to places—all advance in two lines—all turn partners.

1688. *La Dorset.*—First lady advance and stop, then the opposite gentleman—both retire, turning round—ladies' hands across half round, and turn the opposite gentleman with left hands—repeat back to places and turn partners with left hands.

1689. *L'Etoile.*—First couple set to couple at right—set to couple at left—change places with partners and set, and pironette to places—right and left with opposite couple.

1690. *Les Lanciers.*—The grand chain. The first couple advance and turn facing the top, then the couple at right advance behind the top couple, then the couple at left, and the opposite couple do the same, forming two lines. All change places with partners and back again. The ladies turn in a line on the right, the gentlemen in a line on the left. Each couple meet up the centre.

Set in two lines, the ladies in one line, the gentlemen in the other. Turn partners to places—finish with the grand chain.

1691. *THE CALEDONIANS.*—*First Figure.*—The first and opposite couples hands across round the centre and back to places—set and turn partners. Ladies' chain—half promenade. Half right and left. Repeated by the side couples.

1692. *Second Figure.*—The first gentleman advance and retire twice. All set at corners, each lady passing into the next lady's place on the right. Promenade by all. Repeated by the other couples.

1693. *Third Figure.*—The first lady and opposite gentleman advance and retire, bending to each other. First lady and opposite gentleman pass round each other to places. First couple cross over, having hold of hands, while the opposite couple cross on the outside of them—the same reversed. All set at corners, turn, and resume partners. All advance and retire twice, in a circle with hands joined—turn partners.

1694. *Fourth Figure.*—The first lady and opposite gentleman advance and stop; then their partners advance; turn partners to places. The four ladies move to right, each taking the next ladies' place, and stop—the four gentlemen move to left, each taking the next gentleman's place and stop—the ladies repeat the same to the right—then the gentlemen to the left. All join hands and promenade round to places and turn partners. Repeated by the other couples.

1695. *Fifth Figure.*—The first couple promenade, or waltz round inside the figure. The four ladies advance, join hands round and retire—then the gentlemen perform the same—all set and turn partners. Chain figure of eight half round and set. All promenade to places and turn partners. All change sides, join right hands at corners and set—back again to places.—Finish with grand promenade. These three are the most admired of the quadrilles; the

first set invariably takes precedence of every other dance.

1696. SPANISH DANCE.—Danced in a circle or a line by sixteen or twenty couples. The couples stand as for a Country Dance, except that the first gentleman must stand on the ladies' side, and the first lady on the gentleman's side. First gentleman and second lady balance to each other, while first lady and second gentleman do the same and change places. First gentleman and partner balance, while second gentleman and partner do the same, and change places. First gentleman and second lady balance, while first lady and second gentleman do the same and change places. First gentleman and second lady balance to partners, and change places with them. All four join hands in the centre, and then change places, in the same order as the foregoing figure, four times. All four pousette, leaving the second lady and gentleman at the top, the same as in a Country Dance. The first lady and gentleman then go through the same figure with the third lady and gentleman, and so proceed to the end of the dance. This figure is sometimes danced in eight bars time, which not only hurries and inconveniences the dancers, but also ill accords with the music.

1697. WALTZ COTILLON.—Places the same as quadrille; first couple waltz round inside, first and second ladies advance twice and cross over, turning twice; first and second gentleman do the same, third and fourth couples the same, first and second couples waltz to places, third and fourth do the same, all waltz to partners and turn half round with both hands meeting the next lady, perform this figure until in your places; form two side lines, all advance twice and cross over, turning twice; the same, returning; all waltz round; the whole repeated four times.

1698. LA GALOPADE.—Is an extremely graceful and spirited dance in a continual chassés. An unlimited number may join; it is danced in couples as waltzing.

1699. THE GALOPADE QUADRILLE.—1st, Galopade. 2nd, Right and left, sides the same. 3rd, Set and turn hands all eight. 4th, Galopade. 5th, Ladies' chain, sides the same. 6th, Set and turn partners all eight. 7th, Galopade. 8th, Triois, sides the same. 9th, Set and turn partners all eight. 10th, Galopade. 11th, Top lady and bottom gentleman advance and retire, the other six do the same. 12th, Set and turn partners all eight. 13th, Galopade. 14th, Four ladies advance and retire, gentlemen the same. 15th, Double ladies' chain. 16th, Set and turn partners all eight. 17th, Galopade. 18th, Pousette, sides the same. 19th, Set and turn. 20th, Galopade waltz.

1700. THE MAZURKA.—This dance is of Polish origin—first introduced into England by the Duke of Devonshire, on his return from Russia. It consists of twelve movements; and the first eight bars are played (as in quadrilles) before the first movement commences.

1701. THE REDOWA WALTZ, is composed of three parts distinct from each other. 1st, The pursuit. 2nd, The waltz called Redowa. 3rd, The waltz à Deux Temps, executed to a peculiar measure, and which, by a change of the rhythm, assumes a new character. The middle of the floor must be reserved for the dancers who execute the promenade, called the pursuit, while those who dance the waltz turn in a circle about the room. The position of the gentleman is the same as for the waltz. The gentleman sets out with the left foot, and the lady with the right. In the pursuit the position is different, the gentleman and his partner face, and take each other by the hand. They advance or fall back at pleasure, and balance in advance and backwards. To advance, the step of the pursuit is made by a glissade forward, without springing, coupé with the hind foot, and jeté on it. You recommence with the other foot, and so on for the rest. The retiring step is made by a sliding step of the foot backwards, without spring.

*jeté* with the front foot, and *coupé* with the one behind. It is necessary to advance well on the sliding step, and to spring lightly in the two others, *sur place*, balancing equally in the *pas de poursuite*, which is executed alternately by the left in advance, and the right backwards. The lady should follow all the movements of her partner, falling back when he advances, and advancing when he falls back. Bring the shoulders a little forward at each sliding step, for they should always follow the movement of the leg as it advances or retreats; but this should not be too marked. When the gentleman is about to waltz he should take the lady's waist, as in the ordinary waltz. The step of the Redowa, in turning, may be thus described. For the gentleman—*jeté* of the left foot passing before the lady. *Glissade* of the right foot behind to the fourth position aside—the left foot is brought to the third position behind—then the *pas de basque* is executed by the right foot, bringing it forward, and you recommence with the left. The *pas de basque* should be made in three very equal beats, as in the Mazurka. The lady performs the same steps as the gentleman, beginning by the *pas de basque* with the right foot. To waltz *a deux temps* to the measure of the Redowa, we should make each step upon each beat of the bar, and find ourselves at every two bars; the gentleman with his left foot, and the lady with her right, that is to say, we should make one whole and one half step to every bar. The music is rather slower than for the ordinary waltz.

1702. *VAISE CELLARIUS*.—The gentleman takes the lady's left hand with his right, moving one bar to the left by *glissade*, and two hops on his left foot, while the lady does the same to the right, on her right foot; at the second bar they repeat the same with the other foot—this is repeated for sixteen bars—they then waltz sixteen bars, *glissade* and two hops, taking care to occupy the time of two bars, to get quite round. The gentleman now takes both hands

of the lady, and makes the grand square—moving three bars to his left—at the fourth bar making two beats, while turning the angle—his right foot is now moved forward to the other angle three bars, at the fourth beat again while turning the angle—the same repeated for sixteen bars—the lady having her right foot forward, when the gentleman has his left foot forward—the waltz is again repeated; after which several other steps are introduced, but which must needs be seen to be understood.

1703. *CIRCULAR WALTZ*.—The dancers form a circle, then promenade during the introduction—all waltz sixteen bars—set, holding partner's right hand, and turn—waltz thirty-two bars—rest and turn partners slowly—face partner and chassey to the right and left—pirouette lady twice with the right hand, all waltz sixteen bars—set and turn—all form a circle, still retaining the lady by the right hand, and move round to the left, sixteen bars—waltz for finale.

1704. *POLKA WALTZES*.—The couples take hold of hands as in the usual waltz. *First Waltz*.—The gentleman hops the left foot well forward, then back; and *glissades* half round. He then hops the right foot forward and back, and *glissades* the other half round. The lady performs the same steps, beginning with the right foot. *Second*. The gentleman, hopping, strikes the left heel three times against the right heel, and then jumps half round on the left foot; he then strikes the right heel three times against the left, and jumps on the right foot, completing the circle. The lady does the same steps with reverse feet. *Third*. The gentleman raises up the left foot, steps it lightly on the ground forward, then strikes the right heel smartly twice, and *glissades* half round. The same is then done with the other foot. The lady begins with the right foot.

1705. *VAISE A DEUX TEMPS*.—This Waltz contains, like the common waltz, three times, but differently divided; The first time consists of a gliding step;

the second a *chassez*, including two times in one. A *chassez* is performed by bringing one leg near the other, then moving it forward, backward, right, left, and round. The gentleman begins by aliding to the left with his left foot, then performing a *chassez* towards the left with his right foot without turning at all during the first two times. He then alides backwards with his right leg, turning half round; after which he puts his left leg behind, to perform a *chassez* forward, turning then half round for the second time. The lady waltzes in the same manner, except that the first time she alides to the right with the right foot, and also performs the *chassez* on the right, and continues the same as the gentleman, except that she alides backwards with her right foot, when the gentleman slides with his left foot to the left; and when the gentleman alides with his right foot backwards, she alides with the left foot to the left. To perform this waltz gracefully, care must be taken to avoid jumping, but merely to slide, and keep the knees slightly bent.

1706. *CIRCASSIAN CIRCLE*.—The company is arranged in couples round the room—the ladies being placed on the right of the gentlemen after which, the first and second couples lead off the dance. *Figure*. Right and left set and turn partners—ladies chain, waltz.—At the conclusion, the first couple with fourth, and the second with the third couple, re-commence the figure—and so on until they go completely round the circle, when the dance is concluded.

1707. *POLKA*.—In the polka there are but two principal steps, all others belong to fancy dances; and much mischief and inconvenience is likely to arise from their improper introduction into the ball-room.—*First step*: the gentleman raises the left foot slightly behind the right, the right foot is then jumped upon, and the left brought forward with a glissade. The lady commences with the right, jumps on the left, and glissades with the right. The gentleman during his step has

hold of the lady's left hand with his right. *Second step*: The gentleman lightly hops the left foot forward on the heel, then hops on the toe, bringing the left foot slightly behind the right. He then glissades with the left foot forward; the same is then done, commencing with the right foot. The lady dances the same step, only beginning with the right foot. There are a variety of other steps of a fancy character, but they can only be understood with the aid of a master, and, even when well studied, must be introduced with care. The polka should be danced with grace and elegance, eschewing all outré and ungainly steps and gestures, taking care that the leg is not lifted too high, and that the dance is not commenced in too abrupt a manner. Any number of couples may stand up, and it is the privilege of the gentleman to form what figure he pleases; and vary it as often as his fancy and taste may dictate. *First figure*: four or eight bars are devoted to setting forwards and backwards, turning from and towards your partner, making a slight hop at the commencement of each set, and holding your partner's left hand, you then perform the same step (forwards) all round the room. *Second figure*: the gentleman faces his partner, and does the same step backwards all round the room, the lady following with the opposite foot, and doing the step forwards. *Third figure*: The same as the second figure, only reversed, the lady stepping backwards, and the gentleman forwards, always going the same way round the room. *Fourth figure*: the same step as figures two and three, but turning as in a waltz.

1708. *THE GORLYTZA* is similar to the polka, the figures being waltzed through.

1709. *THE SCHOTTISHE*.—The gentleman holds the lady precisely as in the polka. Beginning with the right foot, he slides it forward, then brings up the right foot to the place of the left—slides the left foot forward—and springs or hops on this foot. This movement is repeated to the right. He begins

with the right foot, slides it forward, brings up the left foot to the place of the right foot—slides the right foot forward again, and hops upon it. The gentleman springs twice on the left foot, turning half round; twice on the right foot; twice *enroue* on the left foot, turning half round; and again twice on the right foot, turning half round. Beginning again, he proceeds as before. The lady begins with the right foot, and her step is the same in principle as the gentleman's. Vary, by a *reverse turn*; or by going in a straight line round the room. Double, if you like, each part, by giving four bars to the first part, and four bars to the second part. The *time* may be stated as precisely the same as in the Polka; but let it not be forgotten that *La Schottische* ought to be danced *much slower*.

1710. COUNTRY DANCES.—*Sir Roger de Coerley*.—First lady and bottom gentleman advance to centre, salute, and retire; first gentleman and bottom lady, same. First lady and bottom gentleman advance to centre, turn, and retire, first gentleman and bottom lady the same. Ladies promenade, turning off to the right down the room, and back to places, while gentlemen do the same, turning to the left; top couple remain at bottom; repeat to the end of dance.

1711. LA POLKA COUNTRY DANCES.—All form two lines, ladies on the right, gentlemen on the left. *Figure*: Top lady and second gentleman heel and toe (Polka step) across to each other's place—second lady and top gentleman repeat back to places—second lady and top gentleman the same. Two couples Polka step down the middle and back again—two first couple, Polka Waltz. First couple repeat with the third couple, then with fourth, and so on to end of dance.

1712. THE HIGHLAND REEL.—This dance has now become a great favourite; it is performed by the company arranged in parties of three along the room in the following manner: a lady between

two gentlemen in double rows—all advance and retire—each lady then performs the reel with the gentleman on her right hand, and the opposite gentleman to places—hands three round and back again—all six advance and retire—then lead through to the next trio and continue the figure to the end of the room. Adopt the Highland step, and music of three part tune

#### 1713. TERMS USED TO DESCRIBE THE MOVEMENTS OF DANCES.

*Balances*: Set to partners.

*Chaine Anglaise*: The top and bottom couples right and left.

*Chaine Anglaise double*: The right and left double.

*Chaine des dames*: The ladies chain.

*Chaine des dames double*. The ladies' chain double, which is performed by all the ladies commencing at the same time.

*Chassez*: Move to the right and left.

*Chassez croises*: Gentlemen change places with partners, and back again.

*Demi Chaine Anglaise*: The four opposite persons half right and left.

*Demi Promenade*: All eight half promenade.

*Des-a-dos*: The two opposite persons pass round each other.

*Demi Moulinet*: The ladies all advance to the centre, giving hands, and return to places.

*La grand chaine*: All eight chassiez quite round, giving alternately right and left hands to partners, beginning with the right.

*Le grand rond*: All join hands and advance and retire twice

*Pas d'Allemande*. The gentlemen turn the partners under their arms.

*Traverses*. The two opposite persons change places.

*Vie-a-vie*: The opposite partner.

#### 1714. TERMS USED TO EXPRESS THE PROPERTIES OF MEDICINES.

1715. *ABSORBENTS* are medicines which destroy acidities in the stomach and bowels, such as magnesia, prepared chalk, &c.

1716. **ALTERATIVES** are medicines which restore health to the constitution, without producing any sensible effect, such as sarsaparilla, sulphur, &c.

1717. **ANALEPTICS** are medicines that restore the strength which has been lost by sickness, such as gentian, bark, &c.

1718. **ANODYNES** are medicines which relieve pain, and they are divided into three kinds, *purgatives*, *hypnotics*, and *narcotics* (see these terms); camphor is anodyne as well as narcotic.

1719. **ANTACIDS** are medicines which destroy acidity, such as lime, magnesia, soda, &c.

1720. **ANTALKALIES** are medicines given to neutralize alkalies in the system, such as citric, nitric, or sulphuric acids, &c.

1721. **ANTHELMINTICS** are medicines used to expel and destroy worms from the stomach and intestines, such as turpentine, cowhage, male fern, &c.

1722. **ANTIBILIOUS** are medicines which are useful in bilious affections, such as calomel, &c.

1723. **ANTIRHEUMATICS** are medicines used for the cure of rheumatism, such as colchicum, iodide of potash, &c.

1724. **ANTISCORBUTICS** are medicines against scurvy, such as citric acid, &c.

1725. **ANTISEPTICS** are substances used to correct putrefaction, such as bark, camphor, &c.

1726. **ANTISPASMODICS** are medicines which possess the power of overcoming spasms of the muscles, or allaying severe pain from any cause unconnected with inflammation, such as valerian, ammonia, &c.

1727. **APERIENTS** are medicines which move the bowels gently, such as dandelion-root, &c.

1728. **AROMATICS** are cordial, spicy, and agreeably-flavoured medicines, such as cardamoms, cinnamon, &c.

1729. **ASTRINGENTS** are medicines which contract the fibres of the body, diminish excessive discharges, and act indirectly as tonics, such as oak-bark, galls, &c.

1730. **ATTENUANTS** are medicines

which are supposed to thin the blood, such as ammoniacum, &c.

1731. **BALANICS** are medicines of a soothing kind, such as Tolu, Rhamnus balsam, &c.

1732. **CARMINATIVES** are medicines which allay pain in the stomach and bowels, and expel flatulence, such as aniseed-water, &c.

1733. **CATHARTICS** are strong purgative medicines, such as jalap, &c.

1734. **CORDIALS** are exhilarating and warming medicines, such as aromatic confection, &c.

1735. **CORROBORANTS** are medicines and food which increase the strength, such as iron, gentian, sago, &c.

1736. **DEMULGENTS** correct acrimony, diminish irritation, and soften parts by covering their surfaces with a mild and viscid matter, such as linseed-tea, &c.

1737. **DEOBSTRUENTS** are medicines which remove obstructions, such as iodide of potash, &c.

1738. **DEREGENTS** clean the surfaces over which they pass, such as soap, &c.

1739. **DIAPHORETICS** produce perspiration, such as tartrate of antimony, &c.

1740. **DIGESTIVES** are remedies applied to ulcers or wounds, to promote the formation of matter, such as resin ointments, warm poultices, &c.

1741. **DISCUTIENTS** possess the power of repelling or resolving tumours, such as gamboge, &c.

1742. **DIURETICS** act upon the kidneys and bladder, and increase the flow of urine, such as nitre, squills, &c.

1743. **DRASTICS** are violent purgatives, such as gamboge, &c.

1744. **EMETICS** produce vomiting, or the discharge of the contents of the stomach, such as mustard, tartar emetic, warm water, &c.

1745. **EMOLLIENTS** are remedies used externally to soften the parts they are applied to, such as spermaceti, palm oil, &c.

1746. **EPISPASTICS** are medicines which blister or cause effusion of serum

under the cuticle, such as Spanish flies, &c.

1747. **EMMETICS** are medicines which produce sneezing, such as tobacco, &c.

1748. **ESCHAROTICS** are medicines which corrode or destroy the vitality of the part to which they are applied, such as lunar caustic, &c.

1749. **EXPECTORANTS** are medicines which increase expectoration, or the discharge from the bronchial tubes, such as ipecacuanha, &c.

1750. **FEBRIFUGES** are remedies used in fevers, such as antimonial wines, &c.

1751. **HYDRAGOGUES** are medicines which have the effect of removing the fluid of dropsy, by producing water evacuations, such as gamboge, calomel, &c.

1752. **HYPNOTICS** are medicines that relieve pain by procuring sleep, such as hops, &c.

1753. **LAXATIVES** are medicines which cause the bowels to act rather more than natural, such as manna, &c.

1754. **NARCOTICS** are medicines which cause sleep or stupor, and allay pain, such as opium, &c.

1755. **NUTRIENTS** are remedies that nourish the body, such as sugar, sago, &c.

1756. **PARAGOGUES** are medicines which actually assuage pain, such as compound tincture of camphor, &c.

1757. **PROPHYLACTICS** are remedies employed to prevent the attack of any particular disease, such as quinine, &c.

1758. **PURGATIVES** are medicines that promote the evacuation of the bowels, such as senna, &c.

1759. **REFRIGERANTS** are medicines which suppress an unusual heat of the body, such as wood-sorrel, tamarind, &c.

1760. **RUBEFACIENTS** are medicaments which cause redness of the skin, such as mustard, &c.

1761. **SEDATIVES** are medicines which depress the nervous energy, and destroy sensation, so as to compose, such as foxglove, &c.

1762. **STALOGOGUES** are medicines which promote the flow of saliva or spittle, such as salt, calomel, &c.

1763. **SOPORIFICS** are medicines which induce sleep, such as hops, &c.

1764. **STIMULANTS** are remedies which increase the action of the heart and arteries, or the energy of the part to which they are applied, such as stramonium, which is an internal stimulant, and sevine, which is an external one.

1765. **STOMACHICS** restore the tone of the stomach, such as gentian, &c.

1766. **STRICTICS** are medicines which constrict the surface of a part, and prevent the effusion of blood, such as kino, &c.

1766. **SUDORIFICS** promote profuse perspiration or sweating, such as ipecacuanha, &c.

1767. **TONICS** give general strength to the constitution, restore the natural energies, and improve the tone of the system, such as chamomile, &c.

1768. **VESICANTS** are medicines which blister, such as strong liquid ammonia, &c.

1769. **HINTS UPON PERSONAL MANNERS.** — It is sometimes objected to books upon etiquette that they cause those who consult them to act with mechanical restraint, and to show in society that they are governed by arbitrary rules, rather than by an intuitive perception of what is graceful and polite.

1770. This objection is unfounded, because it supposes that people who study the theory of etiquette do not also exercise their powers of observation in society, and obtain, by their intercourse with others, that freedom and ease of deportment, which society alone can impart.

1771. Books upon etiquette are useful, inasmuch as that they expound the laws of polite society. Experience alone, however, can give effect to the precise manner in which those laws are required to be observed.

1772. Whatever objections may be raised to the teachings of works upon etiquette, there can be no sound argument against a series of simple and brief hints, which shall operate as preau-

tions against mistakes in personal conduct.

1773. Avoid intermeddling with the affairs of others. This is a most common fault. A number of people seldom meet but they begin discussing the affairs of some one who is absent. This is not only uncharitable but positively unjust. It is equivalent to trying a *cause* in the *absence* of the *person implicated*. Even in the criminal code a prisoner is presumed to be innocent until he is found guilty. Society, however, is less just, and passes judgment without hearing the defence. Depend upon it, as a certain rule, *that the people who unite with you in discussing the affairs of others will proceed to slander you the moment that you depart.*

1774. Be consistent in the avowal of principles. Do not deny to-day that which you asserted yesterday. If you do, you will stultify yourself, and your opinions will soon be found to have no weight. You may fancy that you gain favour by subservieney, but so far from gaining favour, you lose respect.

1775. Avoid falsehood. There can be found no higher virtue than the love of truth. The man who deceives others must himself become the victim of morbid distrust, knowing the deceit of his own heart, and the falsehood of his own tongue, his eyes must be always filled with suspicion, and he must lose the greatest of all happiness—confidence in those who surround him.

1776. The following elements of manly character are worthy of frequent meditation:—

1. To be wise in his disputes.
2. To be a lamb in his home.
3. To be brave in battle and great in moral courage.
4. To be discreet in public.
5. To be a bard in his chair.
6. To be a teacher in his household.
7. To be a counsellor in his nation.
8. To be an arbitrator in his vicinity.
9. To be a hermit in his church.
10. To be a legislator in his country.

11. To be conscientious in his actions.

12. To be happy in his life.

13. To be diligent in his calling.

14. To be just in his dealing.

15. That whatever he doeth be to the will of God.

1777. Avoid manifestations of ill-temper. Reason is given for man's guidance. Passion is the tempest by which reason is overthrown. Under the effects of passion man's mind becomes disordered, his face disfigured, his body deformed. A moment's passion has frequently cut off a life's friendship, destroyed a life's hope, embittered a life's peace, and brought unending sorrow and disgrace. It is scarcely worth while to enter into a comparative analysis of ill-temper and passion: they are alike discreditable, alike injurious, and should stand equally condemned.

1778. Avoid pride. If you are handsome, God made you so; if you are learned, some one instructed you; if you are rich, God gave you what you own. It is for others to perceive your goodness; but you should be blind to your own merits. There can be no comfort in deeming yourself better than you really are: that is self-deception. The best men throughout all history have been the most humble.

1779. Affectation is a form of pride. It is, in fact, pride made ridiculous and contemptible. Some one writing upon affectation has remarked as follows:—

"If anything will sicken and disgust a man, it is the affected mincing way in which some people choose to talk. It is perfectly nauseous. If these young jackanapes who screw their words into all manner of diabolical shapes could only feel how perfectly disgusting they were, it might induce them to drop it. With many, it soon becomes such a confirmed habit, that they cannot again be taught to talk in a plain, straightforward, manly way. In the lower order of ladies' boarding-schools, and indeed, too much everywhere, the same sickening, mincing tone is too often found. Do, pray, good people, do talk in your natural tone, if you don't wish to be utterly ridiculous and contemptible."

1780. It is *adulterous*: the language is not pure, because we are in some degree deceived, and obliged to guess it above the persons who object, to ascertain how far it is the other extreme of purity. It is vulgar, we think, to use even the most abused people of language who screw their words into all manner of diabolical shapes. It is vulgar in manner, in speech, and in correspondence. To conduct yourself vulgarly is to offer offense to those who are around you; to bring upon yourself the condemnation of persons of good taste; and to incur the penalty of exclusion from good society. Thus, cast among the vulgar, you become the victim of your own error.

1781. Avoid swearing. An oath is but the wrath of a perturbed spirit.

1782. It is *mean*. A man of high moral standing would rather treat an offense with contempt, than show his indignation by an oath.

1783. It is *vulgar*: altogether too low for a decent man.

1784. It is *cowardly*: implying a fear either of not being believed or obeyed.

1785. It is *ungentlemanly*. A gentleman, according to Webster, is a *gentleman*—well-bred, refined.

1786. It is *indecent*, offensive to delicacy, and extremely unfit for human ears.

1787. It is *foolish*. "Want of delicacy is want of sense."

1788. It is *abusive*—to the mind which conceives the oath, to the tongue which utters it, and to the person at whom it is aimed.

1789. It is *venomous*, showing a man's heart to be a nest of vipers; and every time he swears, one of them starts out from his head.

1790. It is *contemptuous*, forgetting the respect of all the wise and good.

1791. It is *envious*: violating the peace of his, and provoking the dislike of him who will not hold him in esteem. His name is vain.

1792. It is *unmoderate*. Moderation is a virtue which distinguishes the gentleman; he is in all things suitable,

modest, and temperate as please. In-  
temperance and passion, and behaviour is  
disquiet and ungentlemanly. When he enters  
the dwelling of an inferior, he endeavours  
to hide, if possible, the difference  
between their ranks in life; ever willing  
to assist those around him, he is neither  
unkind, haughty, nor overbearing. In  
the mansions of the rich, the correctness  
of his mind induces him to bend  
to etiquette, but not to stoop to adulation;  
correct principle cautions him to  
avoid the gaming-table, inebriety, or  
any other folly that could occasion  
him self-reproach. Pleased with the  
pleasures of reflection, he rejoices to  
see the gaieties of society, and is fastid-  
ious upon no point of little import.—  
Appear only to be a gentleman, and its  
shadow will bring upon you contempt,  
be a gentleman, and its honours will  
remain even after you are dead.

#### 1793. THE TRUE GENTLEMAN.

'Tis he whose every thought and deed  
By rule of virtue moves;  
Whose generous tongue disdains to speak  
The thing his heart disproves

Who never did a slander forge,  
His neighbour's fame to wound,  
Nor hearken to a false report,  
By malice whisper'd round

Who vice, in all its pomp and power,  
Can treat with just neglect,  
And piety, though clothed in rags,  
Religiously respect.

Who to his plighted words and trust  
Has ever firmly stood,  
And, though he promised to his loss,  
He makes his promise good

Whose soul in wary disdain  
His treasure to employ,  
Whom no reward can ever bribe  
The guffiness to destroy

1794. Be Honest. Not only because  
"Honesty is the best policy," but be-  
cause it is a duty to God and to man.  
The heart that can be gratified by dis-  
honest gains; the ambition that can be  
satisfied by dishonest means; the mind  
that can be devoted to dishonest pur-  
poses, must be of the worst order. (See  
263.)

1795. Having said the least, do not  
praise for the sake of praise. It is  
only a shadow, and will vanish. What  
we would wish to be praised for, let  
us do.

1796. Avoid idleness. It is the worst  
of many evils. When you are idle  
as this day our duty breaks, and we  
lose the reply, "Do then this day thy  
daily duty!"

1797. Avoid telling idle tales, which  
is like firing arrows in the dark; you  
know not into whose heart they may  
fall.

1798. Avoid talking about yourself;  
praising your own works; and pre-  
siding your own deeds. If they are  
good, they will proclaim themselves; if  
bad, the less you say of them the better.

1799. Avoid Envy, for it cannot bene-  
fit you, nor can it injure those against  
whom it is cherished.

1800. Avoid Disputation, for the more  
sake of argument. The man who dis-  
putes obstinately and in a bigoted spirit,  
is like the man who would stop the  
fountain from which he should drink.  
Earnest discussion is commendable;  
but factious argument never yet pro-  
duced a good result.

1801. Be kind in little things. The  
true generosity of the heart is more dis-  
played by deeds of minor kindness, than  
by acts which may partake of ostenta-  
tion.

1802. Be polite. Politeness is the  
poetry of conduct—and like poetry it  
has many qualities. Let not your po-  
liteness be too staid, but of that gentle  
kind which indicates refined nature.

1803. Be sociable—avoid reserve in  
society. Remember that the social  
elements, like the air we breathe, are  
purified by motion. Thought illu-  
mines thought, and smiles win smiles.

1804. Be punctual. One minute too  
late has lost many a golden opportunity.  
Besides which, the want of punctuality  
is an affront offered to the person to  
whom your presence is due.

1805. The foregoing remarks are to  
be said to apply to the social conduct,  
rather than to the habits of personal  
manners. Great principles, however,

should be followed in all cases. The  
social conduct is the basis of all  
other conduct. It is the foundation  
upon which all other conduct is built.

1806. Be hearty in your  
1807. Be honest and sincere

Does nothing carelessly with a hurry.  
Does not intend to do what he can  
with his hands.

Does everything in its proper place.  
Does nothing undone that ought to  
be done, and which circumstances per-  
mit him to do.

Keeps his designs and business from  
the view of others.

Is perfectly satisfied with his ene-  
mies, and does not over-trade his  
capital.

Keeps short credits to long ones,  
and asks to credit at all times, either in  
buying or selling; and small profits in  
cheap sales with little risk, to the  
chance of better gains with more hazard.

Is clear and explicit in all his  
business.

Leaves nothing of consequence to  
memory which he can and ought to  
commit to writing.

Keeps copies of all his important  
letters which he sends away, and has  
every letter, invoice, &c., belonging to  
his business, titled, classed, and put  
away.

Does not suffer his desk to be crowded  
by many papers lying upon it.

Is always at the head of his business,  
well knowing that if he leaves it, it will  
leave him.

States it as a maxim that he whose  
credit is suspected is not one to be  
trusted.

Is constantly examining his books,  
and goes through all his affairs as far  
as order and attention will enable him.

Business regularly at stated times,  
and then makes out and transmits all  
his accounts current to his customers,  
before bills are started.

Keeps at least as possible all sorts  
of accommodations in money matters  
not involving other claims in the least  
degree.

Has a constant supply of ready money  
always lying within his income.

Keeps a memorandum book in his  
pocket, in which he notes every party  
order relative to appointments, and  
debts, and petty cash matters.

Is conscious how he becomes scorned  
for any person, and is generous when  
urged by motives of humanity.

Lets a man act strictly to these habits;  
when once began they will be easy to  
continue in—now remembering that he  
has no profits by his pains without  
Providence both not prosper—and suc-  
cess will attend his efforts.

Takes pleasure in your business, and  
it will become your recreation.

Hope for the best, think far the  
worst, and bear whatever happens.

1828 MILK LEMONADE.—Dis-  
solve three quarts of a pound of loaf  
sugar in one pint of boiling water, and  
mix with them one gill of lemon juice,  
and one gill of cherry, then add three  
gills of cold milk. Stir the whole well  
together, and strain it.

1829. GROUND GLASS.—The frosted  
appearance of ground glass may be  
very nearly imitated by gently dabbing  
the glass over with a piece of glazier's  
putty, stuck on the ends of the finger.  
When applied with a light and even  
touch, the resemblance is considerable.

1830 VEGETABLE SOUP.—Peel and  
cut up very fine three onions, three  
turnips, one carrot, and four potatoes,  
put them into a stewpan with a quarter  
of a pound of butter, the same of lean  
ham, and a bunch of parsley, press them  
ten minutes over a sharp fire, then  
add a good spoonful of flour, mix well  
in, moisten with two quarts of broth  
and a pint of boiling milk, boil up,  
keeping it stirred, season with a little  
salt and sugar, and rub through a hair  
sieve, put it into another stewpan, boil  
again, thicken, and serve with fried bread  
to it.

1831. TO PICKLE CHUTNEY.—Put  
about two hundred and fifty in a pickle  
of two pounds, and let them remain in  
it three hours. Put them in a sieve to

1848: The steam engine ONYONIA,  
—With the first work with rock steam

boiled to a strong ley, in the proportion of an ounce to a pint. When dry, it must be rubbed with a fine tripoli.

1844. TO RENOVATE SILKS.—Sponge faded silks with warm water and soap, then rub them with a dry cloth on a flat board; afterwards iron them on the inside with a smoothing iron. Old black silks may be improved by sponging with spirits; in this case, the ironing may be done on the right side, thin paper being spread over to prevent glazing.

1845. TO TAKE OUT STAINS FROM MAHOGANY FURNITURE.—Stains and spots may be taken out of mahogany furniture by the use of a little aquafortis or oxalic acid and water, by rubbing the part with the liquid, by means of a cork, till the colour is restored; observing afterwards to well wash the wood with water, and to dry and polish as usual.

1846. BOILED TURNIP RADISHES.—Boil in plenty of salted water, and in about twenty-five minutes they will be tender; drain well, and send them to table with melted butter. Common radishes, when young, tied in bunches, boiled for twenty minutes, and served on a toast, are excellent.

1847. TO REMOVE STAINS FROM MOURNING DRESSES.—Boil a handful of fig leaves in two quarts of water until reduced to a pint. Bombazines, crapes, cloth, &c., need only be rubbed with a sponge dipped in this liquor, and the effect will be instantly produced.

1848. ICELAND MOSS CHOCOLATE—FOR THE SICK ROOM.—Iceland moss has been in the highest repute on the continent as a most efficacious remedy in incipient pulmonary complaints; combined with chocolate, it will be found a nutritious article of diet, and may be taken as a morning and evening beverage.—*Directions*:—Mix a teaspoonful of the chocolate with a teaspoonful of boiling water or milk, stirring it constantly until it is completely dissolved.

1849. A HINT ON HOUSEHOLD MANAGEMENT.—Have you ever ob-

served what a dislike servants have to anything cheap. They hate saving their master's money. I tried this experiment with great success the other day. Finding we consumed a vast deal of soap, I sat down in my thinking chair, and took the soap question into consideration, and I found reason to suspect we were using a very expensive article, where a much cheaper one would serve the purpose better. I ordered half a dozen pounds of both sorts, but took the precaution of changing the papers on which the prices were marked before giving them into the hands of Betty. "Well, Betty, which soap do you find washes best?" "Oh, please sir, the dearest, in the blue paper; it makes a lather as well again as the other." "Well, Betty, you shall always have it then;" and thus the unsuspecting Betty saved me some pounds a year, and washed the clothes better.—*Rev. Sidney Smith.*

1850. TO THOSE WHO WRITE FOR THE PRESS.—It would be a great favour to editors and printers, should those who write for the press observe the following rules. They are reasonable, and our correspondents will regard them as such:—1. Write with black ink, on white paper, wide ruled. 2. Make the pages small, one fourth that of a foolscap sheet. 3. Leave the second page of each leaf blank. Give to the written page an ample margin *all round*. 5. Number the pages in the order of their succession. 6. Write in a plain, bold hand, with less respect to beauty. 7. Use no abbreviations which are not to appear in print. 8. Punctuate the manuscript as it should be printed. 9. For italics underscore one line, for small capitals, two; capitals, three. 10. Never interline without the caret to show its place. 11. Take special pains with every letter in proper names. 12. Review every word, to be sure that none is illegible. 13. Put directions to the printer, at the head of the first page. 14. Never write a private letter to the editor on the printer's copy, but always on a separate sheet.

1851. DIAPHANIE. — This is a beautiful, useful, and inexpensive art, easily acquired, and producing imitations of the richest and rarest stained glass; and also of making blinds, screens, skylights, Chinese lanterns, &c., in every variety of colour and design. We have been favoured by Messrs. White and Dalton, 52, Rathbone-place, London, with all the necessary particulars, and have obtained from those gentlemen a promise that they will pay every attention to the readers of *Enquire Within* who may consult them upon the subject.

1852. In decorating his house, an Englishman spends as much money as he can conveniently spare; the elegances and refinements of modern taste demand something more than mere comfort; yet though his walls are hung with pictures, his drawing rooms filled with bijouterie, how is it that the windows of his hall, his library, his staircase are neglected? The reason is obvious. The magnificent historical stained glass might be envied, but could not be brought within the compass of ordinary means. Recent improvements in printing in colours led the way to this beautiful invention, by which economy is combined with the most perfect results. A peculiar kind of paper is rendered perfectly transparent, upon which designs are printed in glass colours (*vitro de couleurs*), which will not change with the light. The paper is applied to the glass with a clear white varnish, and when dry, a preparation is finally applied, which increases the transparency, and adds tenfold brilliancy to the effect.

1853. There is another design, printed in imitation of the half-light (*abat-jour*), this is used principally for a ground, covering the whole surface of the glass, within which (the necessary spaces having been previously cut out before it is stuck on the glass) are placed medallion centres of Watteau figures, perfectly transparent, which derive increased brilliancy from the semi-transparency of the surrounding ground. This is by far the cheapest method,

though involving extra trouble, as the plain grounds printed in sheets (20½ in. by 16½), are only 1s. 6d. each; and there is one sheet of suitable transparent designs, which contains twenty-four medallion Watteau centres (price 6s.), twenty of these medallions average 8½ in. by 4in., the remaining four measure 7 in. by 5.

1854. The transparent sheets are all 6s. each, they measure 20½ in. by 16½, and are ready for immediate use. The varnish is 1s. 6d. per bottle; the liqueur diaphane, 1s. 6d. per bottle; brushes, 4d. each; metal palettes, 1s. 6d. each; ivory sticks from 1s. each. These are all the articles required.\*

1855. To ascertain the quantity of designs required measure your glass carefully, and then calculate how many sheets it will take (the sizes of each kind are given above). The sheets are arranged so that they can be joined together continuously, or cut to any size or shape.

1856. PRACTICAL INSTRUCTIONS. — Choose a fine day for the operation, as the glass should be perfectly dry and unaffected by the humidity of the atmosphere. Of course if you have a choice, it is more convenient to work on your glass before it is fixed in the frame. If you are working on a piece of unattached glass, lay it on a flat table (a marble slab is preferable), over which you must previously lay a piece of baize or cloth to keep the glass steady. The glass being thus fixed, clean and polish the side on which you intend to operate (in windows this is the inner side), then with your brush lay on it very equably a good coat of the prepared varnish; let this dry for an hour, more or less, according to the dryness of the atmosphere and the thickness of the coat of varnish; meantime cut and trim your designs carefully to fit the glass (if it is one entire transparent sheet you will find little trouble); then lay them on a piece of paper, face

\* A box of nicely-assorted materials will be forwarded to any part of the kingdom by Messrs. White and Dalton, for 20s., 30s., or 40s.

downwards, and damp the back of them with a sponge, applied several times, to equalise the moisture. In this operation, arrange your time, so that your designs may now be finally left to dry for fifteen minutes before application to the glass, the varnish on which has now become tacky or sticky, and in a proper state to receive them. Apply the printed side next to the glass without pressure; endeavour to let your sheet fall perfectly level and smooth on your glass, so that you may avoid leaving creases, which would be fatal. Take now your palette, lay it flat on the design, and press out all the air bubbles, commencing in the centre, and working them out from the sides; an ivory stick will be found useful in removing creases; you now leave this to dry, and after twenty-four hours apply a slight coat of the liqueur diaphane, leaving it another day, when, if desired, apply a second coat of the same kind, which must be left several days: finally, apply a coat of varnish over all.

1857 If these directions are carefully followed, your glass will never be affected by time or any variations in the weather; it will defy hail, rain, frost, and dust, and can be washed the same as ordinary stained glass, to which, in some respects, it is even superior.

1858. It is impossible to enumerate the variety of articles to the manufacture of which Diaphanie may be successfully applied, as it is not confined to glass, but can be done on silk, parchment, paper, linen, &c., *after they have been made transparent*, which may be accomplished in the following manner:—

1859. Stretch your paper, or whatever it may be, on a frame or drawing board, then apply two successive coats (a day between each, of diaphanous liquor, and after leaving it to dry for several days, cover it with a thin layer of very clear ~~size~~, and when dry it will be in a fit state to receive the coat of varnish and the designs.

1860. Silk, linen, or other stuffs, should be more carefully stretched, and receive a thicker coat of size than paper or parch-

ment, the latter may be strained on a drawing or any other smooth board, by damping the sheet, and after pasting the edges, stretching it down while damp (silk, linen, and other stuffs require to be carefully stretched on a knitting or other suitable frame). Take great care to allow, *whatever you use*, time to dry before applying the liqueur diaphane.

1861. All kinds of screens, lamp shades, and glasses, lanterns, &c. &c., may be made in this way, as heat will produce no effect upon them. The transparent pictures are successful, because they may be hung on a window frame or removed at will, and the window blinds are far superior to anything of that kind that have yet been seen.

1862. Instead of steeping the designs in the transparent liquor at the time of printing them, which was previously done *in order to show their transparency to the purchaser*, but which was practically objectionable, as the paper in that state was brittle, and devoid of pliancy, necessitating also the use of a peculiarly difficult vehicle to manage (varnish) in applying it to the glass, the manufacturer now prepares his paper differently, in order to allow the use of parchment-size in sticking them on the glass. The liqueur diaphane, which is finally applied, renders them perfectly transparent. In this mode of operation, no delay is requisite, the designs being applied to the glass immediately after laying on the size, *taking care to press out all the air bubbles*, for which purpose a roller will be found indispensable. The designs should be damped before the size is applied to them.

1863. We are of opinion that this art may be applied to the production of magic lantern slides, dissolving views, and dioramic effects; though we are not aware whether such experiments have been tried.

1864. POTICHOMANIE.—This elegant accomplishment, which has become so extremely popular and fashionable, promises not only to supersede altogether many of those meretricious

accomplishments which have hitherto absorbed the attention of our fair countrywomen, but to rank among the Fine Arts. It possesses many advantages—

1st. The process is simple and easily acquired.

2nd. It is an exceedingly pleasing and interesting employment, requiring no previous knowledge of drawing, yet affording abundant space for the exercise of the most exquisite taste.

3rd. The time employed is richly repaid; the results produced are of actual value; articles of ornament and domestic utility being produced in perfect imitation of the most beautiful Chinese and Japanese Porcelain, of Sèvres and Dresden China, and of every form that is usual in the productions of the Ceramic Art.

4th. It furnishes an inexhaustible and inexpensive source for the production of useful and elegant presents, which will be carefully preserved as tokens of friendship, and as proofs of the taste and talent of the giver.

#### 1865. ARTICLES NECESSARY IN THE ART OF POTICHOMANIE.

1st. Glass vases (*Potiches en verre*) of shapes suitable to the different orders of Chinese, Japanese, Etruscan, and French Porcelain, Allumettes, &c.; cups, plates, &c., &c., of Sèvres and Dresden design.

2nd. Sheets of coloured drawings, or prints, characteristic representations of the designs or decorations suitable to every kind of porcelain and china.

3rd. A bottle of liquid gum.

4th. Three or four hog-hair brushes.

5th. A bottle of varnish.

6th. Very fine pointed scissors for cutting out.

7th. An assortment of colours for the foundation, in bottles.

8th. A packet of gold powder.

9th. A glass vessel for diluting the colours.

1866. PRICES OF THE ARTICLES USED IN POTICHOMANIE.—Glass vases, &c., of various shapes, from 9d. each; sheets of coloured designs, from 1s. each; pre-

pared colours (ready for use) of every tint required by the potichomanist, 1s. per bottle; bottles of varnish, 1s. each; bottles of prepared gum, 6d., 9d., and 1s. each; bottles of gold paint, 1s. 6d. each; brushes (hog and camel hair), from 1d. each.\*

1867. DIRECTIONS.—We will suppose the object selected for imitation to be a Chinese vase. After providing yourself with a plain glass vase, of the proper shape, you take your sheets of coloured prints on which are depicted subjects characteristic of that peculiar style. From these sheets you can select a great variety of designs, of the most varied character, on the arrangement and grouping of which you will exercise your own taste.

1868. After you have fully decided upon the arrangement of your drawings, cut them out accurately with a pair of scissors, then apply some liquid gum carefully over the coloured side of the drawings, and stick them on the inside of the vase, according to your own previous arrangement—pressing them down till they adhere closely, without any bubbles of air appearing between the glass and the drawings.

1869. When the drawings have had sufficient time to dry, take a fine brush and cover every part of them (without touching the glass) with a coat of parchment size or liquid gum, which prevents the oil colour (which is next applied) from sinking into or becoming absorbed by the paper.

1870. When the interior of the vase is perfectly dry, and any particles of gum size that may have been left on the glass, have been removed, your vase is ready for the final and most important process.

1871. You have now to tint the whole of the vase with a proper colour to give it the appearance of porcelain, for up to this time you will recollect it is but a glass vase, with a few coloured prints stuck thereon.

\* All these articles can be procured at Messrs. White and Dalton's, 52, Rathbone place, in the greatest perfection.

1872. Select from your stock of prepared colours, in bottles, the tint most appropriate to the kind of china you are imitating (as we are now supposed to be making a Chinese vase, it will be of a greenish hue), mix fully sufficient colour in a glass vessel, then pour the whole into the vase. Take now your vase in both hands and turn it round continually in the same direction, until the colour is equally spread over the whole of the interior; when this is satisfactorily accomplished, pour back the remainder. If the prepared colour is too thick, add a little varnish to the mixture before applying it.

1873. If preferred, the colour may be laid on with a soft brush. Should the vase be intended to hold water, the interior must be well varnished after the above operations, or lined with zinc or tin foil.

1874. If the Potichomanist wishes to decorate the mouth of his vase with a gold border, he can do so by mixing some gold powder in a few drops of the essence of lavender and some varnish, applying it on the vase with a fine brush; or he can purchase gold bands, already prepared for application in varied sheets, suitable to the Potichomanic designs.

1875. Potichomanists have found the art capable of greater results than the mere imitation of porcelain vases, by the introduction of glass panels (previously decorated with beautiful flowers on a white ground) into drawing-room doors, and also into walls, which being panel papered, offer opportunities of introducing centre pieces of the same character as the doors; elegant chess and work-tables, folding and cheval-screens, panels for cabinets, cheffioniers and book-cases, slabs for pier and console-tables, glove-boxes, covers for books, music, albums, &c. \*

1876. **WAXEN FLOWERS AND FRUIT.**—There is no art more easily acquired, nor more encouraging in its immediate results, than that of modelling flowers and fruit in wax. We do

not mean that it is easy to attain the highest perfection in this art; but that, compared with other pursuits of a similar nature, the difficulties to be surmounted are comparatively few; and the first rewards of perseverance come very speedily, and are surprisingly agreeable. The art, however, is attended by this drawback—that the materials required are somewhat expensive. But then, the flowers produced are of value, and this is a set-off against the cost.

1877 The materials required for commencing waxen flower making will cost from 20s. to 30s.; and no progress can be made without this outlay at the starting.

1878. The materials may be obtained at most fancy repositories in large towns; and persons wishing to commence the art would do well to call at those places and enquire the particulars, and see the specimens of materials; because, in this, as in every other pursuit, there are novelties and improvements being introduced which no book can give an idea of.\*

1879. Those who reside in places where they cannot obtain the requisite materials, may obtain information by writing to Messrs. Mintorn, Brothers, Soho-square, London; or they may see the names of other professors advertised occasionally in the *Times*, the *Illustrated News*, the *Lady's Newspaper*, and other papers.

1880. There are some small works published, which profess to teach the art. But they are, in fact, written by professors, and the chief aim of them is to sell the materials, which they are written to advertise.

1881. A series of papers upon the subject appeared in the first volume of the *Family Friend*; another series in the *Home Circle*; and also, we think, in the *Lady's Newspaper*.

1882. Those who wish to pursue the

\* A visit to Mrs. Penchoy's Show Rooms, 35, Rathbone-place, London, will be found highly remunerative. Free, from 10 to 6 daily.

subject further than our instructions will take them, may be able to refer to either or all of the works mentioned.

1883. Printed instructions are, however, of comparatively little value, except at the starting, to supply the simplest elements of the art.

1884. The *petals, leaves, &c.*, of flowers, are made of sheets of coloured wax, which may be purchased in packets of assorted colours, at from 5s. to 6s. 6d. per gross.

1885. The *stems* are made of wire of suitable thicknesses, covered with silk, and overlaid with wax; and the leaves are frequently made by thin sheets of wax pressed upon leaves of embossed calico. Leaves of various descriptions are to be obtained of the persons who sell the materials for wax flower making.

1886. Ladies will often find among their discarded artificial flowers leaves and buds that will serve as the base of their wax models.

1887. The best guide to the construction of a flower—far better than printed diagrams or patterns—is to take a flower, say a *tulip*, a *rose*, or a *camellia*. If possible, procure *two* flowers, nearly alike, and carefully picking one of them to pieces, lay the petals down in the order in which they are taken from the flower, and then cut paper patterns from them, and number them from the centre of the flower, that you may know their relative positions.

1888. The perfect flower will guide you in getting the wax petals together, and will enable you to give not only to each petal but to the *contour* of the flower, the characteristics which are natural to it. In most cases, they are merely pressed together and held in their places by the adhesiveness of the wax. From the paper patterns the wax petals or other portions of the flowers may be cut. They should be cut singly by a scissors rather loose at the points; and the scissors should be frequently dipped into water to prevent the wax from adhering to the blades.

1889. The scraps of wax that fall from the cutting will be found useful for

making seed vessels, and other parts of the flowers.

1890. Very few and very simple instruments are required, and these may be purchased at the place where the wax sheets, &c., are obtained.

1891. With regard to the *leaves* of flowers, where the manufactured foundations of them cannot be obtained, patterns of them should be cut in paper, and the veinous appearance may be imparted to the wax by pressing the leaf upon it.

1892. In the construction of *sprigs* it is most important to be guided by sprigs of the natural plant, as various kinds of plants have many different characteristics in the grouping of their flowers, leaves, and branches.

1893. It would be possible to extend these instructions to an indefinite length, but nothing would be gained thereby. The best instruction of all is—TAKE A FLOWER AND COPY IT,—observing care in the selection of good sheets of wax, and seeing that their colours are precisely those of the flower you desire to imitate.

1894. For the tints, stripes, and spots of variegated flowers, you will be supplied with colours among the other materials, and the application of them is precisely upon the principle of water-colour painting.

1895. With regard to the imitations of fruit in wax, very different rules are to be observed. The following directions are from the *Family Friend*:—The material of which moulds for waxen fruit should be composed is the *best* plaster of Paris, which can be bought from the Italian figure-makers at about a penny a pound, in bags containing fourteen pounds, or half-bags containing seven pounds. If this cannot be procured, the cheaper plaster from the oil-shops may be substituted, if it can be procured *quite fresh*. If, however, the plaster is faulty, the results of the modelling will of course be more or less so also. It is the property of plaster of Paris to form a chemical union with water, and to form a paste which rapidly “sets” or hardens into a sub-

stances of the density of firm chalk. The mould must, therefore, be made by an impression from the object to be imitated, made upon the plaster before it sets.

1896. The use of an elastic fruit in early experiments, leads to a want of accuracy in the first steps of the operation, which causes very annoying difficulties afterwards; and therefore a solid, inelastic body—an egg boiled hard—is recommended as the first object to be imitated.

1897. Having filled a small pudding-basin about three quarters full of damp sand (the finer the better); lay the egg lengthways in the sand, so that half of it is above, and half below, the level of the sand, which should be perfectly smooth around it. Then prepare the plaster in another basin, which should be half full of water. Sprinkle the plaster in quickly till it comes to the top of the water, and then, having stirred it for a moment with a spoon, pour the whole upon the egg in the other basin.

1898. While the *half* mould thus made is hardening thoroughly, carefully remove every particle of plaster from the basin in which it was mixed, and also from the spoon which has been used. This must be done by placing them both in water and wiping them perfectly clean. This is highly important, since a small quantity of plaster which has set will destroy the quality of a second mixing if it is mixed therewith. In about five minutes the half mould will be fit to remove, which may be done by turning the basin up with the right hand, (taking care not to lose the sand), so that the mould falls into the left hand. The egg should then be gently allowed to fall back on the sand out of the mould; if, however, it adheres, lightly scrape the plaster from the edge of the mould, and then shake it out into the hollow of the hand. If, however, the exact half of the egg has been immersed in the sand, no such difficulty will arise; this shows how important is exactness in the first position of the object from

which a casting is to be taken. The egg being removed and laid aside, the mould or casting must be "trimmed;" that is, the sand must be brushed from the flat surface of the mould with a nail-brush very slightly, without touching the extreme and sharp edges where the hollow of the mould commences. Then upon the broad edge from which the sand has been brushed, make four equi-distant hollows (with the round end of a table-knife) like the deep impression of a thimble's end. These are to guide hereafter in the fixing of the second half of the mould. The egg should now be replaced in the casting, and the edge of the cast, with the holes, thoroughly lubricated with sweet oil, laid on with a feather, or what is better, a large camel-hair brush.

1899. Into the small pudding-basin from which the sand has been emptied, place with the egg uppermost the half mould, which, if the operation has been managed properly, should fit close at the edges to the side of the vessel; then prepare some more liquid plaster as before, and pour it upon the egg and mould, and while it is hardening, round it with the spoon as with the first half.

1900. In due time remove the whole from the basin: the halves will be found readily separable, and the egg being removed, the mould is ready to cast in, after it has been set aside for an hour or two so as to completely harden. This is the simplest form of mould, and all are made upon the same principle.

1901. The casting of an egg is not merely interesting as the first step in a series of lessons, but as supplying a means of imitating peculiarly charming objects, which the natural historian tries almost in vain to preserve. We shall proceed then with the directions for the casting of an egg in the mould.

1902. For the first experiments, common yellow wax may be used as the material, or the ends of half-burnt wax-candles. The materials of the hard (not tallow) composition mould-candles will also answer.

1903. Every large object to be imitated

in wax should be cast *hollow*; and therefore, though the transparent lightness required in the imitation of fruits is not requisite in an artificial egg, we shall cast the egg upon the same principle as a fruit.

1st.—The two pieces of the plaster of Paris mould must be soaked in hot water for ten minutes.

2nd.—The wax should in the meantime be very slowly melted in a small tin saucepan, with a spout to it, care being taken not to allow it to boil, or it will be discoloured. As to the quantity of wax to be melted, the following is a general rule:—If a lump, the size of the object to be imitated, be placed in the saucepan, it should be sufficient for casting twice, at least.

3rd.—As soon as the wax is melted thoroughly, place the saucepan on the hob of the grate, and, taking the parts of the mould from the hot water, remove the moisture from their surfaces by pressing them gently with a handkerchief or soft cloth. It is necessary to use what is called in some of the arts "a very light hand" in this operation, especially in drying moulds of fruits, whose aspect possesses characteristic irregularities—such as those on the orange, the lemon, or the cucumber. The mould must not be *wiped* but only *pressed*. If the water has not been hot enough, or if the drying is not performed quickly, the mould will be too cold, and the wax will congeal too rapidly, and settle in ridges and streaks; on the other hand, if the wax has been made too hot, it will adhere to the mould, and refuse to come out entire.

4th.—Having laid the two halves of the mould so that there can be no mistake in fitting the one in its exact place quickly on the other, pour from the saucepan into *one* of the half moulds nearly as much wax as will fill the hollow made by the model (egg), quickly fit the other half on the top of it, squeeze the two pieces tightly together in the hand, and still holding them thus, turn them over in every possible position, so that the wax which is slowly congealing

in the internal hollow of the mould may be of equal thickness in all parts. Having continued this process at least two minutes, the hands (still holding and turning the mould) may be immersed in cold water to accelerate the cooling process. The perfect congealment of the wax may be known after a little experience by the absence of the sound of *fluid* on shaking the mould.

5th.—As soon as the mould is completely cooled, the halves may be separated carefully, the upper being lifted straight up from the under, and if the operation has been properly managed, a waxen egg will be turned out of the mould.

6th.—The egg will only require *trimming*, that is, removing the ridge which marks the line at which the halves of the mould joined, and polishing out the scratches or inequalities left by the knife with a piece of soft rag, wet with spirits of turpentine or spirits of wine.

1904. It is always desirable, when the materials and moulds are prepared, to make several castings of the same object, as the moulds are apt to get chipped when laid by in a cupboard; and for this reason, as well as for the sake of practice, we recommend our pupils to make at least a dozen waxen eggs before they proceed to any other object. If they succeed in this *completely*, they may rest assured that every difficulty which is likely to meet them in any future operations will be easily overcome.

That these results of experiment may be rendered correct imitations of the object from whose *form* they were modelled, we shall now add a few further directions:—

1905. *To colour the wax.*—While the wax is yet on the hob, and fluid, stir into it a little *flake white*, in powder, and continue to stir the mixture while it is being poured into the half mould. It will be found that unless the fixing and shaking of the moulds is managed quickly the colouring matter will settle on the side of the half into which the mixture is poured; a little care in

manipulation is therefore again requisite.

1908. *To produce a good imitation of the surface.*—It will be noted by the close observer that the shell of the common hen's egg has a number of minute holes, which destroy the perfect smoothness of its appearance. This peculiarity is imitated in the following simple manner:—In the first place, very slightly prick with a fine needle the surface of your waxen egg, and then, having smeared it with spirits of turpentine, rub the surface all over, so as nearly to obliterate the marks of the needle point.

1907. The simple experiment which has just been described really embodies all that need be said to start the pupil in his first endeavour. The colouring of the wax is a matter which comes easily enough by experiment. Oranges, lemons, large gooseberries, small cucumbers, &c., &c., are excellent objects for practice. To those who require special information upon points not herein described—if such persons cannot refer to the works we have already enumerated, we shall be happy to reply in our monthly *Interview*.\*

1908. **FEATHER FLOWERS.**—The art of making Feather Flowers, though a very easy and inexpensive accomplishment, and yielding pretty ornaments for the mantel-piece or the cheffonneer, is but little pursued. Many persons are under the impression that they can only be made from the feathers of exotic birds, and that these are expensive. But the following instructions will dispel this misconception, and remove the difficulty. There is a magnificent bouquet of feather flowers in the Crystal Palace, west of the centre transept, made according to these directions:—

1909. Procure the best white geese or swans' feathers, have them plucked off the fowl with care not to break the web, free them from down, except a

small quantity on the shaft of the feather.

1910. Having procured two good specimens of the flower you wish to imitate, carefully pull off the petals of one, and, with a piece of tissue paper, cut out the shape of each size, taking care to leave the shaft of the feather at least half an inch longer than the petal of the flower. Carefully bend the feather with the thumb and finger to the proper shape; mind not to break the web.

1911. **TO MAKE THE STEM AND HEART OF A FLOWER.**—Take a piece of wire six inches long; across the top lay a small piece of cotton wool, turn the wire over it, and wind it round until it is the size of the heart or centre of the flower you are going to imitate. If a single flower, cover it with paste or velvet of the proper colour, and round it must be arranged the stamens; these are made of fine Indian silk, or feathers may be used for this purpose. After the petals have been attached, the silk or feather is dipped into gum, and then into the farina. Place the petals round, one at a time, and wind them on with Moravian cotton, No. 4; arrange them as nearly like the flower you have for a copy as possible. Cut the stems of the feathers even, and then make the calix of feathers, cut like the pattern or natural flower. For the small flowers the calix is made with paste. Cover the stems with paper or silk the same as the flowers; the paper must be cut in narrow strips, about a quarter of an inch wide.

1912. **TO MAKE THE PASTES OF THE CALIX, HEARTS, AND BUDS OF FLOWERS.**—Take common white starch and mix it with gum water until it is the substance of thick treacle; colour it with the dyes used for the feathers, and keep it from the air.

1913. **TO MAKE THE FARINA.**—Use common ground rice, mixed into a stiff paste with any dye; dry it before the fire, and when quite hard, pound it to a fine powder. The buds, berries, and hearts of some double flowers are made

\* Commenced Jan. 1, 1856; 2d., Monthly; Yearly Volumes, 2s. 6d.

with cotton wool, wound around wire, moulded to the shape with thumb and finger. Smooth it over with gum water, and when dry, cover the buds, berries, or calix with the proper coloured pastes: they will require one or two coats, and may be shaded with a little paint, and then gummed and left to dry.

1914. Flowers of two or more shades or colours are variegated with water-colours, mixed with lemon-juice, ultramarine and chrome for blue, and gold may also be used in powder, mixed with lemon-juice and gum water.

1915. The materials required are some good white goose or swan's feathers; a little fine wire, different sizes; a few skeins of fine floss silk, some good cotton wool or wadding, a reel of No. 4, Moravian cotton, a skein of Indian silk, the starch and gum for pastes, and a pair of small sharp scissors, a few sheets of coloured silk paper, and some water-colours, with the following dyes:—

1916. TO DYE FEATHERS BLUE.—Into two pennyworths of oil of vitriol, mix two pennyworths of the best indigo in powder; let it stand a day or two; when wanted shake it well, and into a quart of boiling water put one tablespoonful of the liquid. Stir it well, put the feathers in, and let them simmer a few minutes.—(See 419.)

1917. YELLOW.—Put a tablespoonful of the best turmeric into a quart of boiling water; when well mixed put in the feathers. More or less of the turmeric will give them different shades, and a very small quantity of soda will give them an orange hue.—(See 423.)

1918. GREEN.—Mix the indigo liquid with turmeric, and pour boiling water over it; let the feather simmer in the dye until they have acquired the shade you want them.

1919. PINK.—Three good pink saucers in a quart of boiling water, with a small quantity of cream of tartar. If a deep colour is required, use four saucers. Let the feathers remain in the dye several hours.

1920. RED.—Into a quart of boiling

water dissolve a teaspoonful of cream of tartar, put in one tablespoonful of prepared cochineal, and then a few drops of muriate of tin. This dye is expensive, and scarlet flowers are best made with the plumage of the red Ibis, which can generally be had of a bird-fancier or bird-stuffer, who will give directions how it may be applied.

1921. LILAC.—About two teaspoonfuls of cudbear, into about a quart of boiling water; let it simmer a few minutes before you put in the feathers. A small quantity of cream of tartar turns the colour from lilac to amethyst.

1922. BLACK.—(See 418.) CRIMSON.—(See 420.) *Read the general instructions upon Dyeing (402.)*

1923. BEFORE THE FEATHERS ARE DYED they must be put into hot water, and let them drain before they are put into the dyes. After they are taken out of the dye, rinse them two or three times in clear cold water (except the red), which must only be done once. Then lay them on a tray, over which a cloth has been spread, before a good fire; when they begin to dry and unfold draw each feather gently between your thumb and finger, until it regains its proper shape.

1924. THE LEAVES OF THE FLOWERS are made of green feathers, cut like those of the natural flower, and serrated at the edge with a very small pair of scissors. For the calix of a moss-rose the down is left on the feather, and is a very good representation of the moss on the natural flower.

1925. COLLECTING AND LAYING OUT SEA-WEEDS.—First wash the sea-weed in fresh water, then take a plate, or dish (the larger the better), cut your paper to the size required, place it in the plate with fresh water, and spread out the plant with a good-sized camel-hair pencil in a natural form (picking out with the pin gives the sea-weed an unnatural appearance, and destroys the characteristic fall of the branches, which should be carefully avoided); then gently raise the paper

with the specimen out of the water, placing it in a slanting position for a few moments, so as to allow the superabundant water to run off; after which, place it in the press. The press is made with either three pieces of board or paste-board. Lay on the first board two sheets of blotting-paper; on that lay your specimens; place straight and smooth over them a piece of old muslin, fine cambric, or linen; then some more blotting-paper, and place another board on the top of that, and continue in the same way. The blotting-paper and the muslin should be carefully removed and dried every day, and then replaced; at the same time, those specimens that are sufficiently dried may be taken away. Nothing now remains but to write on each the name, date, and locality. You can either gum the specimens in a scrap-book, or fix them in, as drawings are often fastened, by making four slits in the page, and inserting each corner. This is by far the best plan, as it admits of their removal, without injury to the page, at any future period, if it be required either to insert better specimens, or intermediate species. Some of the larger Algae will not adhere to the paper, and consequently require gumming. The following method of preserving them has been communicated to me by a botanical friend:—"After well cleaning and pressing, brush the coarser kinds of Algae over with spirits of turpentine, in which two or three small lumps of gum mastic have been dissolved, by shaking in a warm place; two-thirds of a small phial is the proper proportion, and this will make the specimens retain a fresh appearance."—*Miss Gifford's Marine Botanist.*

**1926. DRY BOTANICAL SPECIMENS FOR PRESERVATION.**—The plants you wish to preserve should be gathered when the weather is dry, and after placing the ends in water, let them remain in a cool place till the next day. When about to be submitted to the process of drying, place each plant between several sheets of blotting-

paper, and iron it with a large smooth heater, pretty strongly warmed, till all the moisture is dissipated. Colours may thus be fixed, which otherwise become pale, or nearly white. Some plants require more moderate heat than others, and herein consists the nicety of the experiment; but I have generally found, that if the iron be not too hot, and is passed rapidly, yet carefully, over the surface of the blotting paper it answers the purpose equally well with plants of almost every variety of hue and thickness. In compound flowers, with those also of a stubborn and solid form, as the *Centaurea*, some little art is required in cutting away the under part, by which means the profile and forms of the flowers will be more distinctly exhibited. This is especially necessary, when the method employed by Major Velley is adopted; viz., to fix the flowers and fructification down with gum upon the paper previous to ironing, by which means they become almost incorporated with the surface. When this very delicate process is attempted, blotting-paper should be laid under every part excepting the blossoms, in order to prevent staining the white paper. Great care must be taken to keep preserved specimens in a dry place.

**1927. SKELETON LEAVES** may be made by steeping leaves in rain water, in an open vessel, exposed to the air and sun. Water must occasionally be added to compensate loss by evaporation. The leaves will putrefy, and then their membranes will begin to open; then lay them on a clean white plate, filled with clean water, and with gentle touches take off the external membranes, separating them cautiously near the middle rib. When there is an opening towards the latter the whole membrane separates easily. The process requires a great deal of patience, as ample time must be given for the vegetable tissues to decay, and separate.

**1928. A MORE EXPEDITIOUS METHOD.**—A table-spoonful of chloride of lime in a liquid state, mixed with a quart of

pure spring water. Leaves or seed vessels of plants to be soaked in the mixture for about four hours, then taken out and well washed in a large basin filled with water, after which, they should be left to dry with free exposure to light and air. Some of the larger species of forest leaves, or such as have strong ribs, will require to be left rather more than four hours in the liquid.

**1929. DWARF PLANTS.**—Take a cutting of the plant you wish to dwarf, say a myrtle, for instance, and having set it in a pot, wait until you are satisfied that it has taken root; then take a cutting from it, and place it in a miniature flower pot, taking care to fill it more than three parts with fine sand, the remainder with mould. Put it under a glass, on the chimney-piece, or in any warm place, and give it very small quantities of water.

**1930. PRESERVE FUNGI.**—Receipt of the celebrated botanist, William Withering, Esq., by which specimens of fungi may be beautifully preserved. —Take two ounces of sulphate of copper, or blue vitriol, and reduce it to powder, and pour upon it a pint of boiling water, and when cold, add half a pint of spirits of wine; cork it well, and call it "the pickle." To eight pints of water add one pint and a-half of spirits of wine, and call it "the liquor." Be provided with a number of wide-mouthed bottles of different sizes, all well fitted with corks. The fungi should be left on the table as long as possible, to allow the moisture to evaporate; they should then be placed in the pickle for three hours, or longer, if necessary; then place them in the bottles intended for their reception, and fill with the liquor. They should then be well corked and sealed, and arranged in order, with their names in front of the bottles.

**1931. MODELLING IN CORK, GUTTA PERCHA, LEATHER, PAPER, PLASTER OF PARIS, WAX, WOOD, &c.**—Modelling, in a general

sense, signifies the art of constructing an original pattern, which is to be ultimately carried out on an enlarged scale, or copied exactly.

**1932.** When models are constructed to give a miniature representation of any great work, elevation, or topographical information, they are executed in detail, with all the original parts in just and due proportions, so that the work may be conducted or comprehended better; and if the model is a scientific one, viz. relating to machinery, physical science, &c., then it requires to be even still more accurate in its details. In fact, all models should be constructed on a scale which should be appended to them, so that a better idea may be obtained of the proportions and dimensions.

**1933.** In the earliest ages, modelling in clay—which was sometimes subsequently coated with wax—was much practised: afterwards sculpture succeeded; but it still depended on modelling in a measure, as it now does, for its excellence. Few, indeed, of our great works of art are executed without some kind of a model in addition to the design—we had almost written, none; but we know that statues and reliefs have been executed without any other aid than that furnished by the design alone.

**1934.** The most celebrated models of modern, and we believe surpassing any of former times, are M. Brunetti's "Ancient Jerusalem," Mr. E. Smith's "Modern Jerusalem," General Piffer's "Switzerland," and "The Waterloo Model;" all of them examples worthy of being imitated, whether for the excellence of the work, the faithfulness of the model, or the patience and scientific knowledge displayed in their construction.

**1935. THE MATERIALS REQUIRED** are plaster of Paris, wax, whiting, putty, clay, pipe-clay; common and factory cinders; sand of various colours; powdered flint spar, oyster-shells, bricks, slate, cinders, and glass; gums, acacia and tragacanth; starch; paper—white

and brown, cardboard and millboard; cork sheets, cork raspings, and old bottle corks; gutta percha; leather and leather chips; wood; paints, oil, water, and varnish; moss, lichen, ferns, and grass; talc, window and looking-glass; muslin and net; chenille; carded wool; tow; wire; hay and straw; various varnishes, glue, and cements.

1936. THE TOOLS consist of brushes for paints, varnishes, and cements; two or three bradawls; a sharp penknife; a chisel, hammer and punches; scissors; and pencil.

1937. CAVES may be readily modelled in cork, wood, starch-paste, or cinders covered with brown paper soaked in thin glue.

1938. TO CONSTRUCT THEM OF CINDERS.—Arrange the cinders, whether common or factory, in such a manner as to resemble the intended design; then cover in such parts as require it with brown paper soaked in thin glue until quite pulpy. When nearly dry, dust over with sand, powdered brick, slate, and chopped lichen or moss, from a pepper-box; touch up the various parts with either oil, water, or varnish colours; and if necessary, form your trees of wire covered with brown paper, and moss glued on.

1939. When a cave is constructed in the way we have pointed out, on a large scale, and the interior sprinkled with powdered fluor spar or glass, the effect is very good by candle-light.

1940. STALACTITES may be represented by rough pieces of wood, which must be smeared with glue, and sprinkled with powdered fluor spar, or glass.

1941. TO MODEL CAVES IN CORK.—Construct the frame-work of wood, and fill up the outline with old bottle-corks. The various projections, recesses, and other minutiae, must be affixed afterwards with glue, after being formed of cork, or hollowed out in the necessary parts, either by burning with a hot wire and scraping it afterwards, or by means of a sharp-pointed bradawl.

1942. If small cork models are constructed, the trees should be formed by transfixing short pieces of shaded chenille with a fine wire (.), and sticking them into the cork.

1943. Various parts of the model must be touched up with oil, water, or varnish colours; and powdered brick, slate, and chopped lichen or moss, dusted on as usual.

1944. *Wooden models* are constructed roughly in deal, according to the proper design, and the various fine parts afterwards affixed with glue or brads.

1945. In forming the finer parts of the wooden model, a vast amount of unnecessary labour may be saved, and a better effect obtained, by burning much of the outline instead of carving it. By this plan deeper tones of colouring, facility of operating, and saving of time and labour, are the result.

1946. In common with other models, those constructed of wood, require the aid of lichen, moss, powdered slate, &c., and colours, to complete the effect.

1947. When water issues from the original cave, and it is desirable to copy it in the model, a piece of looking-glass should be glued on the stand, and the edges surrounded by glue, and paper covered with sand. Sometimes it is requisite to cut away the wood of the stand, so as to let in the looking-glass; this, however, is only when the water is supposed to be much lower than the surface of the land.

1948. *Starch paste* models are formed in the usual way of the following composition:—Soak gum tragacanth in water, and when soft, mix it with powdered starch till of a proper consistence. It is much improved by adding some double-refined sugar finely powdered. When the model is finished, it must be coloured correctly, and varnished with white varnish, or left plain. This is the composition used by confectioners for modelling the various ornaments on cakes.

1949. ANCIENT CITIES, may be constructed of cork or starch paste, in the same manner as directed above; bearing

in mind the necessity for always working models according to a scale, which should be afterwards affixed to the stand of the model.

1950. **MODERN CITIES**, are better made of cardboard, starch-paste, or pipe-clay; the houses, public buildings, and other parts being constructed according to scale.

1951. *Houses* should be cut out of a long thin strip of cardboard, partially divided by three strokes of a penknife, and glued together; this must afterwards be marked with a pencil, or pen and ink, to represent the windows, doors, stones, &c.; and the roof—cut out of a piece of square cardboard equally and partially divided—is then to be glued on, and the chimney—formed of a piece of lucifer-match, or wood notched at one end and flat at the other—is to be glued on. A square piece of cardboard must be glued on the top of the chimney; a hole made with a pin in the card and wood; and a piece of grey worsted, thinned at the end, fixed into the hole for smoke.

1952. *Cathedrals, Churches, and other public buildings* are made in the same way; only requiring the addition of small chips of wood, ends of lucifer matches, cork raspings, or small pieces of cardboard, for the various ornaments, if on a large scale, but only a pencil-mark if small.

1953. When constructed of starch paste, or pipe-clay, the material is rolled flat on a table or marble slab, and the various sides cut out with a sharp penknife; they are then gummed together, and coloured properly.

1954. If large models of houses or buildings are made, the windows are constructed of talc or thin glass, covered with net or muslin. The frames of the windows are made of cardboard, neatly cut out with a sharp penknife.

1955. **COUNTRIES** should be made of cork, because it is easier to work. Although the starch paste is very agreeable to model with, yet it is liable to shrink, and therefore when in the mass one part dries quicker than another, so that there

is not equal contraction—a great objection to its employment in accurate models. Cork, on the contrary, may be easily cut into all forms, and from abounding with pores it is remarkably light—no little consideration to travellers.

1956. **TOPOGRAPHICAL** models may, however, be formed of plaster of Paris, but the weight is an objection. We have lately constructed a model of a country on a moderate scale—one-eighth of an inch to a square mile—with its mountains, valleys, and towns, and it was done in this manner:—A model was first made in clay, according to scale and plan; a mould was taken of various parts in gutta percha, rendered soft by dipping it into hot water, and the parts cast in paper cement.

1957. **PAPER CEMENT**.—1. Reduce paper to a smooth paste by boiling it in water; then add an equal weight each of sifted whiting and good size; boil to a proper consistence, and use.

1958. 2. Take equal parts of paper, paste, and size, sufficient finely powdered plaster of Paris to make into a good paste, and use as soon as possible after it is mixed. This composition may be used to cast architectural ornaments, busts, statues, &c., being very light, and receiving a good polish, but it will not stand weather.

1959. The several mountains and other parts being formed, we joined them together in their proper places with some of the No. 1 paper cement, rendered rather more fluid by the addition of a little thin glue. The towns were made of a piece of cork, cut and scratched to the form of the town; steeples of cardboard, and trees of blades of moss. Sand was sprinkled in one part; looking-glass in others, for the lakes, bays, and rivers; and green baize flock for the verdant fields.

1960. **MONUMENTS**, ancient or modern, are better constructed of cork, on account of the lightness and facility in working, the more especially the ancient ones. We once constructed a model of the Acropolis of Athens in cork

which was completed in one-fifth the time occupied by other materials, and looked much better; and have lately been at work upon others representing the ancient monuments of Egypt.

1961. CITIES AND TEMPLES.—We will suppose that the model is to represent the Temple of Theseus, at Athens, which was built by Cimon, the son of Miltiades. In the first place we must obtain the necessary dimensions, and then reducing the number of feet to fractional parts of an inch, form a scale suitable for carrying out the whole. A piece of wood of the necessary size is procured, the plan marked out in pencil, and the ground on which it stands imitated in cork, by cutting away the parts that are not required, with a sharp penknife, and adding others with glue. The floor of the temple is now to be glued on with common glue, for we should remark that the liquid glue does not dry quick enough for cork modelling, and is not so good as the old plan; the sides and ends are formed of cork sheets, marked with a lead-pencil to represent the blocks of stone; and ruined and broken parts imitated, by pricking the cork with a blunt penknife or needle. The frieze, representing the battle between the Centaurs and Lapithæ, and the metopes in mezzo-relievo, containing a mixture of the labours of Hercules and Theseus, should be drawn upon the sheets of cork according to scale, and coloured with a little lamp-black and raw sienna, to represent the subject intended: if the scale is small, or if the model admits of it, the groups may be neatly carved with a sharp penknife from the cork, which has been previously outlined with pencil. The next thing we shall have to do, is to strengthen the interior of the model, and this is done by gluing small pieces of cork, at irregular intervals at the angles formed by the junction of any parts; these are put on the inside, and lastly, the roof is affixed. Any parts that require to be coloured, must be touched up with varnish or water colours, and lichen,

&c., affixed with mucilage where it is requisite.

1962. TO MODEL FROM LIVING OBJECTS.—We will imagine that the reader desires to model the features of some friend, and as there is some difficulty in the matter, on account of the person operated upon having a natural tendency to distort the features when the liquid plaster is poured upon the face, and some danger of suffocation if the matter is not well managed, we will proceed at once to describe the various stages of operating:—

1963. Mix the plaster of Paris with warm water, and have it about as thick as cream, but do not mix it until all is ready. Lay the friend upon his back, and having raised the head to the natural position when walking, by means of a pillow of bran or sand, cover the parts intended to be cast with oil of almonds or olives, applied by means of a feather, brush, or lump of cotton; plug the ears with cotton or wool, and insert two quills into the nostrils, and plug the space between each quill and the nostril very carefully with cotton.

1964. Cover the face with the plaster, beginning at the upper part of the forehead, and spread it downwards, over the eyes, which should be kept *firmly* closed, but in such a manner as not to produce any distortion by too violent compression—and continue the plaster as far as the lower border of the chin; cover that part of the chest and arms that is to be represented, and carry the plaster upwards, so as to join the cast of the face; then carefully remove each, and season for casting, by soaking or brushing with linseed oil boiled with sugar of lead or litharge. Some persons boil the moulds in the oil; and many, instead of casting the face in one piece, and the chest in another, lay threads across the face and up and down it, leaving the ends out. As the plaster sets, or is nearly set, the threads are pulled through, so as to divide the cast into four, five, or more pieces.

1965. The back part of the head is

moulded by having an oval trencher-sort of vessel, deeper than half the head, and generally made of plaster, and boiled in oil. The back of the head being oiled, and this trencher partially filled with liquid plaster of Paris, the head is lowered into it, and the cast taken. The back of the neck is cast with the person turned over on his face.

1966. Each part of the mould is marked, so as to admit of its corresponding; sometimes with a x or ||, which, passing over the junction of two pieces, serves to distinguish them.

1967. To model the face, join the several pieces, and tie them together with twine; then wrap some rag round the joints, to prevent the plaster oozing out, and pour in the plaster made tolerably fluid, taking care to oil the inside of the mould very carefully first. When the outer part of the model is nearly set, scoop out the centre with a spoon, and let the whole dry; then remove the strings, &c., and smooth off the edges of the joints upon the model with a sharp penknife, and carve out the eyes from the mass, otherwise they will appear as if closed.

1968. Wax models may be made from the moulds used for the plaster; but when the wax sets at the outside to about one-eighth of an inch, the rest should be poured out of the mould; or, a smaller portion being poured in, it may be shaken about the inside of the mould until it is coated. The pieces are removed, and the seams trimmed up, as in the plaster cast.

1969. If a cast be made in gutta percha from the model in plaster—or, what is still better, in fusible metal, then by pressing basil leather, moistened with water, into the mould, and strengthening the back and centre with chips of wood, affixed by liquid glue, a very nice model may be obtained in leather, which, when varnished, will look like oak carving—the more especially if it be stained with Stephens's Oak Stain.

1970. Ruins should be constructed

of cork, according to the directions we have given, and when it is necessary to represent the mouldering walls covered with moss or ivy, a little green baize flock, or moss chippings, should be attached by mucilage to the part; and oftentimes a brush of raw sienna, combined with varnish, requires to be laid underneath the moss or flock, in order to improve the effect. Prostrate columns and huge blocks are effectively represented in cork, and should be neatly cut out with a sharp knife, and the various parts supposed to be destroyed by age, picked away with a pin or blunt knife afterwards.

1971. RUSTIC WORK, SEATS, &c., may be constructed of wire twisted to the proper shape and size, and then covered with gutta percha, rendered soft by being dipped in hot water. The gutta percha should be twisted round the wire previously warmed, and gently heated over a spirit lamp, or dipped again into hot water, so as to allow the various parts to be covered with it. When the model is finished, it should be touched up here and there with oil colours—green, yellow, sienna, and Venetian red—according to fancy, and the effect produced will be very good.

1972. BAKING, BOILING, BROILING, FRYING, ROASTING, STEWING, and *SPOILING*.—A Dialogue between the DUTCH OVEN, the SAUCEPAN, the SPIT, the GRIDIRON, and the FRYING-PAN, with reflections thereupon, in which all housekeepers and cooks are invited to take an interest.

1973. We were once standing by our soullery, when all of a sudden we heard a tremendous clash and jingle—the Saucepan had tumbled into the Frying-pan; the Frying-pan had shot its handle through the ribs of the Gridiron; the Gridiron had bestowed a terrible thump upon the hollow head of the Dutch-oven; and the Spit had dealt a very skilful stroke, which shook the sides of all the combatants, and made them ring out the noises by which we were startled. Musing upon this inci-

dent, we fancied that we overheard the following dialogue:—

1974. **FRYING-PAN.**—Hallo, Saucepan! what are you doing here, with your dropsical corporation? Quite time that you were superannuated; you are a mere meat-spoiler. You adulterate the juices of the best joint, and give to the stomach of our master little else than watery compounds to digest.

1975. **SAUCEPAN.**—Well! I like your conceit! You—who harden the fibre of flesh so much, that there is no telling whether a steak came from a bullock, a horse, or a bear!—who can't fry a slice of potato, or a miserable smelt, but you must be flooded with oil or fat, to keep your spiteful nature from burning or biting the morsel our master should enjoy. Not only that—you open your mouth so wide, that the soot of the chimney drops in, and frequently spoils our master's dinner; or you throw the fat over your sides, and set the chimney in a blaze!

1976. **SITT.**—Go on! go on! six one, and half-a-dozen the other!

1977. **DUTCH-OVEN.**—Well, Mr. Spit, you needn't try to foment the quarrel. You require more attention than any of us; for if you are not continually watched, and helped by that useful little attendant of yours they call a Jack, your lazy, lanky figure would stand still, and you would expose the most delicious joint to the ravages of the fire. In fact, you need not only a Jack to keep you going, but a cook to constantly baste the joint confided to your care, without which our master would have but a dry bone to pick. Not only so, but you thrust your spear-like length through the best meat, and make an unsightly gash in a joint which otherwise might be an ornament to the table.

1978. **SITT.**—What, Dutch oven, is that you? venerable old sobersides, with a hood like a monk! Why, you are a mere dummy—as you are placed so you remain; there you stand in one place, gaping wide and catching the coals as

they fall; if you were not well watched, you would burn the one half, and sadden the other, of whatever you were required to prepare. Bad luck to *your* impertinence.

1979. **GRIDIRON.**—Peace! peace! We all have our merits and our demerits. —At this remark of the Gridiron, there was a general shout of laughter.

1980. **SAUCEPAN.**—Well, I declare, I never thought that I should have my merits classed with those of the miserable skeleton called a Gridiron. That is a joke! A thing with six ribs and a tail to compare with so useful a member of the *cuisine* community as myself! Why you, Gridiron, waste one half of the goodness of the meat in the fire, and the other half you send to the table tainted with smoke, and burnt to cinders!—A loud rattle of approbation went round, as the poor Gridiron fell under this torrent of derision from the Saucepan.

1981. Coming away from the scene of confusion, I ordered the scullerymaid to go instantly and place each of the utensils that lay in disorder upon the ground, into its proper place, charging her to cleanse each carefully, until it should be required for use.

1982. Returning to my library I thought it would form no mean occupation were I to spend a few hours in reflection upon the relative claims of the disputants. I did so, and the following is the result:—

1983. **THE GRIDIRON.**—The Gridiron, though the simplest of cooking instruments, is by no means to be despised. The Gridiron, as indeed all cooking utensils, should be kept scrupulously clean; and when it is used, the bars should be allowed to get warm before the meat is placed upon it, otherwise the parts crossed by the bars will be insufficiently dressed. The fire should be sharp, clear, and free from smoke. The heat soon forms a film upon the surface of the meat, by which the juices are retained. Chops and steaks should not be too thick nor too thin. From a half to three-quarters of an inch

is the proper thickness. Avoid thrusting the fork into the meat, by which you release the juice. There is a description of gridiron in which the bars are grooved to catch the juice of the meat; but a much better invention is the upright gridiron, which is attached to the front of the grate, and has a pan at the bottom to catch the gravy. Kidneys, rashers, &c., dressed in this manner will be found delicious. There are some, however, who think that the dressing of meat over the fire secures a flavour which cannot otherwise be obtained. Remember that the Gridiron is devoted to the cooking of small dishes, or snacks, for breakfast, supper, and luncheon, and is therefore a most useful servant, ready at a moment's notice. Remember, also, that every moment which is lost, after the gridiron has delivered up his charge, is a delay to the prejudice of the Gridiron. From the Gridiron to the table without loss of time should be the rule.—(See 239).

1984. THE FRYING-PAN is less a favourite, in our estimation, than the Gridiron; but not to be despised, nevertheless. He is a noisy and a greasy servant, requiring much watchfulness. Like the Gridiron, the Frying-pan requires a clear, but not a large fire, and the pan should be allowed to get thoroughly hot, and bewell covered with fat, before meat is put into it. The excellence of frying very much depends upon the sweetness of the oil, butter, lard, or fat, that may be employed. The Frying-pan is very useful in the warming of cold vegetables and other kinds of food, and, in this respect may be considered a real friend of economy. All know the relish afforded by a pancake—a treat which the Gridiron would be unable to afford us. To say nothing of eggs and bacon, and various kinds of fish, to which both the Saucepan and the Gridiron are quite unsuited, because they require that which is the essence of frying, *boiling and browning in fat*.—(See 239).

1985. THE SPIT is a very noble and a very useful implement of cookery, as

ancient, we presume, as he is straight-forward at his work. Perhaps the process of roasting stands only second in the rank of excellence in cookery. The process is perfectly sound in its chemical effects upon the food; while the joint is kept so immediately under the eye of the cook, that it must be the fault of that functionary if the joint does not go to table in the highest state of perfection. The process may be commenced very gradually, by the joint being kept a good distance from the fire, and gradually brought forward, until it is thoroughly soaked within and browned without. The Spit has this advantage over the Oven, and especially over the common oven, that the meat retains its own flavour, not having to encounter the evaporation from fifty different dishes, and that the steam from its own substance passes entirely away, leaving the essence of the meat in its prime condition.—(See 239, 598).

1986. THE DUTCH OVEN, though not so royal an instrument as the Spit, is, nevertheless, of great utility for small dishes of various kinds, which the Spit would spoil by the magnitude of its operations, or the Oven destroy by the severity of its heat. It combines, in fact, the advantages of roasting and baking, and may be adopted for compound dishes, and for warming cold scraps; it is easily heated, and causes no material expenditure of fuel.—(See 239).

1987. THE SAUCEPAN.—When we come to speak of the Saucepan, we have to consider the claims of a very large, ancient, and useful family; and perhaps, looking at the generic orders of the Saucepan, all other cooking implements must yield to its claims. There are large saucepans, which we dignify with the name of boilers, and small saucepans, which come under the denomination of stew-pans. There are few kinds of meat or fish which it will not receive, and dispose of in a satisfactory manner; and few vegetables for which its *modus operandi* is not adapted. The Saucepan, rightly used, is a very economical servant, allowing nothing to be

lost; that which escapes from the meat while in its charge forms broth, or may be made the base of soups. Fat rises upon the surface of the water, and may be skimmed off; while in various stews it combines, in an eminent degree, what we may term the *fragrance* of cookery, and the *piquancy* of taste. The French are perfect masters of the use of the Stew-pan. And we shall find that, as all cookery is but an aid to digestion, the operations of the Stew-pan resemble the action of the stomach very closely. The stomach is a close sac, in which solids and fluids are mixed together, macerated in the gastric juice, and dissolved by the aid of heat and motion, occasioned by the continual contractions and relaxations of the coats of the stomach during the action of digestion. This is more closely resembled by the process of stewing than by any other of our culinary methods. —(See 239, 590).

1988. In this rapid review of the claims of various cooking utensils, we think that we have done justice to each. They all have their respective advantages; besides which, they contribute to the VARIETY presented by our tables, without which the routine of eating would be very monotonous and unsatisfactory.

1989. There is one process to which we must yet allude—the process of SPOILING. Many cooks know how to produce a good dish, but too many of them know how to spoil it. They leave fifty things to be done just at the critical moment when the chief dish should be watched with an eye of keenness, and attended by a hand thoroughly expert. Having spent three hours in making a joint hot and rich, they forget that a quarter of an hour, after it is taken from the fire, may impair or spoil all their labours. The serving-up of a dinner may be likened to the assault upon Sebastopol. Looking upon the joint, as the Malakhoff, and the surrounding dishes as the redans, the bastions, and the forts, they should all be seized simultaneously, and made the

prize of the commander-in-chief, and his staff around the dinner-table. Such a victory will always do the cook the highest honour, and entitle him to the gratitude of the household.

1990. WHY does a polished metal teapot make better tea than a black earthen one?—As polished metal is a very bad radiator of heat, it keeps the water hot much longer; and the hotter the water is, the better it “draws” the tea.

1991. WHY will not a dull black teapot make good tea?—Because the heat of the water flies off so quickly, through the dull black surface of the teapot, that the water is very rapidly cooled, and cannot “draw” the tea.

1992. Do not pensioners, and aged cottagers, generally prefer the black earthen teapot to the bright metal one?—Yes, because they set it on the hob to “draw;” in which case, the little black teapot will make the best tea.

1993. WHY will a black teapot make better tea than a bright metal one, if it is set upon the hob to draw?—Because the black teapot will absorb heat plentifully from the fire, and keeps the water hot; whereas a bright metal teapot (set upon the hob) would throw off the heat by reflection.

1994. THEN sometimes a black earthen teapot is the best, and sometimes a bright metal one?—Yes; when the teapot is set on the hob to “draw,” the black earthen is the best, because it absorbs heat; but when the teapot is not set on the hob, the bright metal is the best, because it radiates heat very slowly, and therefore keeps the water hot.

1995. WHY does a saucepan which has been used boil in a shorter time than a new one?—Because the bottom and back are covered with soot, and the black soot rapidly absorbs the heat of the glowing coals.

1996. WHY should the front and lid of a saucepan be clean and bright?—As they do not come in contact with the fire, they cannot absorb heat, and (being bright) they will not suffer the heat to escape by radiation.

1997. WHY should not the bottom and back of a kettle be cleaned and polished?—Because they come in contact with the fire, and (while they are covered with black soot) absorb heat freely from the burning coals.

1998. WHY are dinner covers made of bright tin or silver?—Because light-coloured and highly-polished metal is a very bad radiator of heat; and, therefore, bright tin or silver will not allow the heat of the cooked food to escape through the cover by radiation.

1999. WHY should a meat-cover be very brightly polished?—If the cover be dull or scratched, it will absorb heat from the food; and instead of keeping it hot, will make it cold.

2000. WHY should a silver meat-cover be plain, and not chased?—Because, if the cover be chased, it will absorb heat from the food; and instead of making it hot, will make it cold.

2001. WHAT is the smoke of a candle?—Solid particles of carbon, separated from the wick and tallow, but not consumed.

2002. WHY are some particles consumed and not others?—The combustion of the carbon depends upon its combining with the oxygen of the air. Now, as the outer surface of the flame prevents the access of air to the interior parts, much of the carbon of those parts passes off in smoke.

2003. WHY do lamps smoke?—Either because the wick is cut unevenly, or else because it is turned up too high.

2004. WHY does a lamp smoke, when the wick is cut unevenly?—Because the points of the jagged edge (being very easily separated from the wick) lead the flame with more carbon than it can consume; and as the heat of the flame is greatly diminished by these little bits of wicks, it is unable to consume even the usual quantity of smoke. The same applies when the wick is turned up too high.

2005. WHY does a lamp-glass diminish the smoke of the wick?—Because it increases the supply of oxygen to the flame, by producing a draught; and it concentrates and reflects the heat of

the flame; in consequence of which, the combustion of the carbon is more perfect, and very little escapes unconsumed.—(From No. 0000 to '0000 are quoted from "*Dr. Brewer's Guide to Science*." We have taken some care to extract the answers relating to domestic subjects. See 291.)

2006. CAUTIONS FOR THE PREVENTION OF ACCIDENTS.—The following regulations should be engraved on the memories of all:—

2007. As most sudden deaths come by water, particular caution is therefore necessary in its vicinity.

2008. Stand not near a tree, or any leaden spout, iron gate, or palisade, in time of lightning.

2009. Lay loaded guns in safe places, and never imitate firing a gun in jest.

2010. Never sleep near charcoal; if drowsy at any work where charcoal fires are used, take the fresh air.

2011. Carefully rope trees before they are cut down, that when they fall they may do no injury.

2012. When benumbed with cold beware of sleeping out of doors; rub yourself, if you have it in your power, with snow, and do not hastily approach the fire.

2013. Beware of damp.

2014. Air vaults, by letting them remain open some time before you enter, or scattering powdered lime in them. Where a lighted candle will not burn, animal life cannot exist; it will be an excellent caution, therefore, before entering damp and confined places, to try this simple experiment.

2015. Never leave saddle or draught horses, while in use, by themselves; nor go immediately behind a led horse as he is apt to kick.

2016. Ride not on foot-ways.

2017. Be wary of children, whether they are up or in bed; and particularly when they are near the fire, an element with which they are very apt to amuse themselves.

2018. Leave nothing poisonous open or accessible; and never omit to write the

word "POISON" in large letters upon it, wherever it may be placed.

2019. In walking the streets keep out of the line of the cellars, and never look one way and walk another.

2020. Never throw pieces of orange-peel, or broken glass bottles into the streets.

2021. Never meddle with gunpowder by candle-light.

2022. In trimming a lamp with naphtha, never fill it. Leave space for the spirit to expand with warmth.

2023. Never quit a room leaving the poker in the fire.

2024. When the brass rod of the stair-carpet becomes loose, fasten it immediately.

2025. In opening effervescing drinks, such as soda water, hold the cork in your hand.

2026. Quit your house with care on a frosty morning.

2027. Have your horses' shoes roughed directly there are indications of frost.

2028. Keep lucifer matches in their cases, and never let them be strewed about.

2029. BIRDLIME.—Take any quantity of linseed oil, say half a pint; put it into an old pot, or any vessel that will stand the fire without breaking; the vessel must not be more than one-third full, put it on a slow fire, stir it occasionally until it thickens as much as required; this will be known by cooling the stick in water, and trying it with the fingers. It is best to make it rather harder than for use. Then pour it into cold water. It can be brought back to the consistency required with a little Archangel tar.

2030. RINGWORM.—The head to be washed twice a day with soft soap and warm soft water; when dried, the places to be rubbed with a piece of linen rag dipped in ammonia from gas tar; the patient should take a little sulphur and treacle, or some other gentle aperient, every morning; brushes and combs should be washed every day, and the ammonia kept tightly corked.  
—(See 1260.)

## 2031. DON'T RUN IN DEBT.

"Don't run in debt."—never mind, never mind,

If the clothes are faded and torn:  
Seam them up, make them do; it is better by far,

Than to have the heart weary and worn.  
Who'll love you the more for the shape of your hat,

Or your ruff, or the tie of your shoe,  
The out of your vest, 'or your boots, or cravat,  
If they know you're in debt for the new.

There's no comfort, I tell you, in walking the street

In fine clothes if you know you are in debt;  
And feel that perchance you some tradesman may meet,

Who will sneer—"They're not paid for yet."

Good friends, let me beg of you, don't run in debt,

If the chairs and the sofas are old—  
They will fit your back better than any new set,

Unless they're paid for—with gold;  
If the house is too small, draw the closer together,

Keep it warm with a hearty good will;  
A big one unpaid for, in all kinds of weather,  
Will send to your warm heart a chill.

Don't run in debt—now, dear girls, take a hint,

(If the fashions have changed since last season,)

Old Nature is out in the very same tint,  
And old Nature, we think, has some reason.

But just say to your friend, that you cannot afford

To spend time to keep up with the fashion;  
That your purse is too light, and your honour too bright,

To be tarnished with such silly passion.  
Gents, don't run in debt—let your friends, if they can,

Have fine houses, feathers, and flowers,  
But, unless they are paid for, be more of a man

Than to envy their sunshiny hours.  
If you've money to spare, I have nothing to say—

Spend your silver and gold as you please;  
But, mind you, the man who his bill has to pay  
Is the man who is never at ease.

Kind husbands, don't run into debt any more;  
"Twill fill your wife's cup full of sorrow,  
To know that a neighbour may call at your door,

With a claim you must settle to-morrow.

Oh! take my advice—it is good, it is true!

(But, lest you may some of you doubt it,)

I'll whisper a secret, now seeing 'tis you—

I have tried it, and know all about it:

*The chain of a debtor is heavy and cold,*

*Its links all corrosion and rust,*

*Gold it o'er as you will—it is never of gold,*

*Then spurn it aside with disgust.*

2032. LOVE'S TELEGRAPH.—If a gentleman wants a wife, he wears a ring on the *first* finger of the left hand; if he is engaged, he wears it on the *second* finger; if married, on the *third*; and on the fourth if he never intends to be married. When a lady is not engaged, she wears a hoop or diamond on her *first* finger; if engaged, on the *second*; if married, on the *third*; and on the fourth if she intends to die a maid. When a gentleman presents a fan, flower, or trinket, to a lady with the left hand, this, on his part, is an overture of regard; should she receive it with the left hand, it is considered as an acceptance of his esteem; but if with the right hand, it is a refusal of the offer. Thus, by a few simple tokens, explained by rule, the passion of love is expressed: and, through the medium of the telegraph, the most timid and diffident man may, without difficulty, communicate his sentiments of regard to a lady, and, in case his offer should be refused, avoid experiencing the mortification of an explicit refusal.

2033. SLUGS and SNAILS are great enemies to every kind of garden-plant, whether flower or vegetable; they wander in the night to feed, and return at day-light to their haunts; the shortest and surest direction is, "rise early, catch them, and kill them." If you are an early riser, you may cut them off from their day retreats, or you may lay cabbage leaves about the ground, especially on the beds which they frequent. Every morning examine these leaves, and you will find a great many taking refuge beneath; if they plague you very much, search for their retreat, which you can find by their

slimy track, and hunt there for them day by day; lime and salt are very annoying to snails and slugs; a pinch of salt kills them, and they will not touch fresh lime; it is a common practice to sprinkle lime over young crops, and along the edges of beds, about rows of peas and beans, lettuces and other vegetables; but when it has been on the ground some days, or has been moistened by rain, it loses its strength. —(See 1305, 1306.)

2034. CATERPILLARS and APHIDES.—A garden syringe or engine, with a cap on the pipe full of very minute holes, will wash away these disagreeable visitors very quickly. You must bring the pipe close to the plant, and pump hard, so as to have considerable force on, and the plant, however badly infested, will soon be cleared without receiving any injury. Every time that you use the syringe or garden engine, you must immediately rake the earth under the trees, and kill the insects you have dislodged, or many will recover and climb up the stems of the plants.

2035. GRUBS on orchard-trees and gooseberry and currant bushes, will sometimes be sufficiently numerous to spoil a crop; but, if a bonfire be made with dry sticks and weeds on the windward side of the orchard, so that the smoke may blow among the trees, you will destroy thousands; for the grubs have such an objection to smoke, that very little of it makes them roll themselves up and fall off; they must be swept up afterwards.

2036. WASPS destroy a good deal of fruit, but every pair of wasps killed in spring saves the trouble and annoyance of a swarm in autumn; it is necessary, however, to be very careful in any attempt upon a wasp, for its sting is painful and lasting. In case of being stung, get the blue bag from the laundry, and rub it well into the wound as soon as possible. Later in the season, it is customary to hang vessels of beer, or water and sugar, in the fruit-trees, to entice them to drown themselves.

2037. **BUTTERFLIES and MOTHS**, however pretty, are the worst enemies one can have in a garden; a single insect of this kind may deposit eggs enough to overrun a tree with caterpillars, therefore they should be destroyed at any cost of trouble. The only moth that you must spare, is the common black and red one; the grubs of this feed exclusively on groundsel, and are therefore a valuable ally of the gardener.

2038. **EARWIGS** are very destructive insects; their favourite food is the petals of roses, pinks, dahlias, and other flowers. They may be caught by driving stakes into the ground, and placing on each an inverted flower pot; the earwigs will climb up and take refuge under it, when they may be taken out and killed. Clean bowls of tobacco-pipes placed in like manner on the tops of smaller sticks are very good traps; or very deep holes may be made in the ground with a crowbar, into these they will fall, and may be destroyed by boiling water.

2039. **TOADS** are among the best friends the gardener has; for they live almost exclusively on the most destructive kinds of vermin. Unsightly, therefore, though they may be, they should on all accounts be encouraged; they should never be touched nor molested in any way; on the contrary, places of shelter should be made for them, to which they may retire from the burning heat of the sun. If you have none in your garden, it will be quite worth your while to search for them in your walks, and bring them home, taking care to handle them tenderly, for although they have neither the will nor the power to injure you, a very little rough treatment will injure them; no cucumber or melon frame should be without one or two.—*Glenny's Gardening for Children.*\*

2040. **SMALL-POX MARKS.**—Mr. Waddington, surgeon to the Sea-Bathing Infirmary, Margate, lances the

pustules with a needle, and thus allows the poisonous matter (which is the cause of the disfigurement) to escape, and also orders the room to be kept dark. Mr. Waddington states that, during twelve years' practice, he has not known one case out of twenty of a person being marked by the small-pox, when the above simple expedient has been resorted to. (See 1018.)

2041. **VENTILATING BED-ROOMS.**—A sheet of finely perforated zinc, substituted for a pane of glass in one of the upper squares of a chamber window, is the cheapest and best form of ventilator; there should not be a bed-room without it.

2042. **GREASE SPOTS FROM SILK.**—Upon a deal table lay a piece of woollen cloth or baize, upon which lay smoothly the part stained, with the right side downwards. Having spread a piece of brown paper on the top, apply a flat-iron just hot enough to scorch the paper. About five or eight seconds is usually sufficient. Then rub the stained part briskly with a piece of cap-paper. (See 815.)

2043. **CLEAN WHITE OSTRICH FEATHERS.**—Four oz. of white soap, cut small, dissolved in four pints of water, rather hot, in a large basin; make the solution into a lather, by beating it with birch rods, or wires. Introduce the feathers, and rub well with the hands for five or six minutes. After this soaping, wash in clean water, as hot as the hand can bear. Shake until dry.

2044. **INK STAINS.**—Very frequently, when logwood has been used in manufacturing ink, a reddish stain still remains, after the use of oxalic acid, as in the former directions. To remove it, procure a solution of the chloride of lime, and apply it in the same manner as directed for the oxalic acid. (See 176, 177, 277, 502, and 507.)

2045. **BALDNESS.**—The decoction of boxwood, successful in cases of baldness, is thus made:—Take of the common box, which grows in garden borders, stems and leaves four large handfuls,

\* This is an excellent little work.

boil in three pints of water, in a closely covered vessel, for a quarter of an hour, and let it stand in a covered earthenware jar for ten hours or more; strain, and add an ounce and a half of Eau de Cologne, or lavender water, to make it keep. The head should be well washed with this solution every morning. (See 148, 149, and 169.)

**2046. TO DESTROY ANTS.**—Drop some quicklime on the mouth of their nest, and wash it in with boiling water; or dissolve some camphor in spirits of wine, then mix with water, and pour into their haunts; or tobacco water, which has been found effectual. They are averse to strong scents. Camphor will prevent their infesting a cupboard, or a sponge saturated with creosote. To prevent their climbing up trees, place a ring of tar about the trunk, or a circle of rag moistened occasionally with creosote.

**2047. BREACH OF PROMISE OF MARRIAGE.**—A verbal offer of marriage is sufficient whereon to ground an action for breach of promise of marriage. The conduct of the suitor, subsequent to the breaking off the engagement, would weigh with the jury in estimating damages. An action may be commenced although the gentleman is not married. The length of time which must elapse before action, must be reasonable. A lapse of three years, or even half that time, without any attempt by the gentleman to renew the acquaintance, would lessen the damages very considerably—perhaps do away with all chance of success, unless the delay could be satisfactorily explained. The mode of proceeding is by an action at law. For this an attorney must be retained, who will manage the whole affair to its termination. The first proceeding (the writ, service thereof, &c.) costs from £2 to £5. The next proceeding—from a fortnight to a month after service of the writ—costs about £5 more. The whole costs, to the verdict of the jury, from £35 to £50, besides the expenses of the lady's witnesses.

If the verdict be in her favour, the other side have to pay her costs, with the exception of about £10. If the verdict be against her, the same rule holds good, and she must pay her opponent's costs—probably from £60 to £70.

**2048.** Before legal proceedings are commenced, a letter should be written to the gentleman, by the father or brother of the lady, requesting him to fulfil his engagement. A copy of this letter should be kept, and it had better be delivered by some person who can prove that he did so, and that the copy is correct: he should make a memorandum of any remarks or conversation.

**2049.** We give an extract or two from the law authorities: they will, we have no doubt, be perused by our fair readers with great attention, and some satisfaction. "A man, who was paying particular attentions to a young girl, was asked by the father of the latter, after one of his visits, what his intentions were, and he replied, "I have pledged my honour to marry the girl in a month after Christmas;" and it was held that this declaration to the father, who had a right to make the inquiry, and to receive a true and correct answer, taken in connexion with the visits to the house, and the conduct of the young people towards each other, was sufficient evidence of a promise of marriage."

**2050.** "The common law does not altogether discountenance long engagements to be married. If parties are young, and circumstances exist, showing that the period during which they had agreed to remain single was not unreasonably long, the contract is binding upon them; but if they are advanced in years, and the marriage is appointed to take place at a remote and unreasonably long period of time, the contract would be voidable, at the option of either of the parties, as being in restraint of matrimony. If no time is fixed and agreed upon for the performance of the contract, it is in contemplation of law *a contract to marry within a reasonable period after request.*

Either of the parties, therefore, after the making of such a contract, may call upon the other to fulfil the engagement; and in case of a refusal, or a neglect so to do on the part of the latter within a reasonable time after the request made, the party so calling upon the other for a fulfilment of the engagement, may treat the betrothment as at an end, and bring an action for damages for a breach of the engagement. If both parties lie by for an unreasonable period, and neither renew the contract from time to time by their conduct or actions, or call upon one another to carry it into execution, the engagement will be deemed to be abandoned by mutual consent, and the parties will be free to marry whom they please."

2051. "The Roman law very properly considered the term of two years amply sufficient for the duration of a betrothment; and if a man who had engaged to marry a girl did not think fit to celebrate the nuptial within two years from the date of the engagement, the girl was released from the contract."

2052. DYE SILK LILAC. — For every pound of silk, take one and a-half pound of archil, mix it well with the liquor; make it boil a quarter of an hour, dip the silk quickly, then let it cool, and wash it in river water, and a fine half violet, or lilac, more or less will be obtained. (See 402.)

2053. DYE HAIR AND FEATHERS GREEN. — Take of verdigris or verditer, of each one ounce; gum water, one pint; mix them well, and dip the hair or feathers into the mixture, shaking them well about. (See 418 to 421.)

2054. EXCELLENT HAIR WASH. — Take one ounce of borax, half an ounce of camphor; powder these ingredients fine, and dissolve them in one quart of boiling water; when cool, the solution will be ready for use; damp the hair frequently. This wash effectually cleanses, beautifies, and strengthens the hair, preserves the colour, and prevents early baldness.

The camphor will form into lumps after being dissolved, but the water will be sufficiently impregnated.

2055. ESSENCE OF CELERY. — This is prepared by soaking for a fortnight a-half ounce of the seeds of celery in a-quarter pint of brandy. A few drops will flavour a pint of soup or broth, equal to a head of celery.

2056. HICCUGH OR HICCUP. — This is a spasm of the diaphragm, caused by flatulency, indigestion, or acidity. It may be relieved by the sudden application of cold, also by two or three mouthfuls of cold water, by eating a small piece of ice, taking a pinch of snuff, or anything that excites counter action.

2057. SUBSTITUTE FOR CREAM IN TEA OR COFFEE. — Beat the white of an egg to a froth, put to it a very small lump of butter, and mix well. Then turn into it gradually, so that it may not curdle. If perfectly done, it will be an excellent substitute for cream.

2058. STAINS AND MARKS FROM BOOKS. — A solution of oxalic acid, citric acid, or tartaric acid, is attended with the least risk, and may be applied upon the paper and prints without fear of damage. These acids, taking out writing ink, and not touching the printing, can be used for restoring books where the margins have been written upon, without attacking the text. (See 543.)

2059. MINT VINEGAR. — Put into a wide-mouthed bottle, fresh nice clean mint leaves enough to fill it loosely; then fill up the bottle with good vinegar; and after it has been stopped close for two or three weeks, it is to be poured off clear into another bottle, and kept well corked for use. Serve with lamb when mint cannot be obtained.

2060. YELLOW RICE. — Take one pound of rice, wash it clean, and put it into a saucepan which will hold three quarts; add to it half a pound of currants picked and washed, one quarter of an ounce of the best turmeric powder, previously dissolved in a cupful of

water, and a stick of cinnamon; pour over them two quarts of cold water, place the saucepan uncovered on a moderate fire, and allow it to boil till the rice is dry, then stir in a quarter of a pound of sugar, and two ounces of butter: cover up, and place the pan near the fire for a few minutes, then mix it well and dish up. This is a favourite dish with the Javanese, and will be found excellent as a vegetable with roast meat, poultry, &c. It also forms a capital pudding, which may be improved by the addition of raisins, and a few blanched almonds.

**2061. NEAT MODE OF SOLDERING.**—Cut out a piece of tinfoil the size of the surfaces to be soldered. Then dip a feather in a solution of sal ammoniac, and wet over the surfaces of the metal, then place them in their proper position with the tinfoil between. Put it so arranged on a piece of iron hot enough to melt the foil. When cold they will be found firmly soldered together.

**2062. TRACING PAPER.**—Mix together by a gentle heat, one oz. of Canada balsam, and a-quarter pint of spirits of turpentine; with a soft brush spread it thinly over one side of good tissue paper. It dries quickly, is very transparent, and is not greasy, therefore does not stain the object upon which it may be placed.

**2063. DYE SILK, &c., CRIMSON.**—Take about a spoonful of outbear, put it into a small pan, pour boiling water upon it; stir and let it stand a few minutes, then put in the silk, and turn it over in a short time, and when the colour is full enough, take it out; but if it should require more violet or crimson, add a spoonful or two of purple archil to some warm water; steep, and dry it within doors. It must be mangled, and ought to be pressed.

**2064. CLEAN KID GLOVES.**—Make a strong lather with curd soap and warm water, in which steep a small piece of new flannel. Place the glove on a flat, clean, and unyielding surface

—such as the bottom of a dish, and having thoroughly soaped the flannel (when squeezed from the lather), rub the kid till all dirt be removed, cleaning and re-shaping the flannel from time to time. Care must be taken to omit no part of the glove, by turning the fingers, &c. The gloves must be dried in the sun, or before a moderate fire, and will present the appearance of old parchment. When quite dry, they must be gradually "pulled out," and will look new. (See 322, 1321.)

**2065. PREVENT GALLING IN INVALIDS.**—The white of an egg, beaten to a strong froth, then drop in gradually whilst you are beating two teaspoonfuls of spirits of wine, put it into a bottle, and apply occasionally with a feather.

**2066. MASHED POTATOES AND SPINACH OR CABBAGE.**—Moisten cold mashed potatoes with a little white sauce: take cold cabbage or spinach, and chop either one very finely. Moisten them with a brown gravy. Fill a tin mould with layers of potatoes and cabbage; cover the top and put it into a stew-pan of boiling water. Let it remain long enough to warm the vegetables; then turn the vegetables out and serve them. This might be prepared by boiling the vegetables separately, and merely putting them into the mould in layers, to be turned out when wanted. It forms a very pretty dish for an entrée. (See 122.)

**2067. COLD CARROTS AND TURNIPS** may be added to soups, if they have not been mixed with gravies; or warmed up separately, and put into moulds in layers; they may be turned out, and served the same as the potatoes and cabbage described above.

**2068. RASPBERRY VINEGAR.**—Put a pound of very fine ripe raspberries in a bowl, *bruise them well*, and pour upon them a quart of the best white wine vinegar; next day strain the liquor on a pound of fresh ripe raspberries; *bruise them also*, and the following day *do the same, but do not squeeze the fruit, or it will make it foment*; only drain

the liquor as dry as you can from it. The last time, pass it through a canvas bag, previously wet with the vinegar, to prevent waste. Put the juice into a stone jar, with a pound of sugar to every pint of juice; the sugar must be broken into lumps; stir it, and when melted, put the jar into a pan of water; let it simmer, and skim it; when cold, bottle it; it will be fine, and thick, when cold, like strained honey, newly prepared.

#### 2069. SIGNS OF THE WEATHER.

2070 Dew.—If the dew lies plentifully on the grass after a fair day, it is a sign of another. If not, and there is no wind, rain must follow. A red evening portends fine weather; but if it spread too far upwards from the horizon in the evening, and especially morning, it foretells wind or rain, or both. When the sky, in rainy weather, is tinged with sea green, the rain will increase, if with deep blue, it will be showery.

2071 Clouds. — Against much rain, the clouds grow bigger, and increase very fast, especially before thunder. When the clouds are formed like fleeces, but dense in the middle and bright towards the edges, with the sky bright, they are signs of a frost, with hail, snow, or rain. If clouds form high in air, in thin white trains like locks of wool, they portend wind, and probably rain. When a general cloudiness covers the sky, and small black fragments of clouds fly underneath, they are a sure sign of rain, and probably it will be lasting. Two currents of clouds always portend rain, and, in summer, thunder.

2072. HEAVENLY BODIES.—A haziness in the air, which fades the sun's light, and makes the orb appear whitish, or ill-defined—or at night, if the moon and stars grow dim, and a ring encircles the former, rain will follow. If the sun's rays appear like Moses' horns—if white at setting, or shorn of his rays, or goes down into a bank of clouds in the horizon, bad weather is to be expected. If the moon looks pale and dim, we expect rain; if red, wind; and if of her

natural colour, with a clear sky, fair weather. If the moon is rainy throughout, it will clear at the change, and, perhaps, the rain return a few days after. If fair throughout, and rain at the change, the fair weather will probably return on the fourth or fifth day.

2073. ASTHMA.—The following is recommended as a relief.—Two ounces of the best honey, and one ounce of castor oil mixed. A tea-spoonful to be taken night and morning.

2074. MILDEW OUT OF LINEN.—Take soap, and rub it well; then scrape some fine chalk, and rub it also on the linen. Lay it on the grass. As it dries, wet it a little, and it will come out in twice doing.

2075. EXCELLENT REMEDY FOR SPRAINS.—Put the white of an egg into a saucer, keep stirring it with a piece of alum about the size of a walnut until it becomes a thick jelly; apply a portion of it on a piece of lint or tow large enough to cover the sprain, changing it for a fresh one as often as it feels warm or dry; the limb is to be kept in an horizontal position by placing it on a chair.

2076. REMEDY FOR RHEUMATISM, LUMBAGO, SPRAINS, BRUISES, CHILBLAINS, (BEFORE THEY ARE BROKEN) AND BITES OF INSECTS.—One raw egg well beaten, half a pint of vinegar, one ounce of spirits of turpentine, a quarter of an ounce of spirits of wine, a quarter of an ounce of camphor. Those ingredients to be beaten well together, then put in a bottle and shaken for ten minutes, after which, to be corked down tightly to exclude the air. In half an hour it is fit for use. Directions:—To be well rubbed in, two, three, or four times a day. For rheumatism in the head, to be rubbed at the back of the neck and behind the ears.

2077 UNFERMENTED BREAD.—Three pounds wheat meal; half an ounce, avoirdupois, muriatic acid; half an ounce, avoirdupois, carbonate soda;

water enough to make it of a proper consistence. For white flour, four pounds of flour; half an ounce, avoirdupois, muriatic acid; half an ounce, avoirdupois, carbonate soda; water about a quart. The way of making is as follows:—First mix the soda and flour well together by rubbing in a pan; then pour the acid into the water, and mix well by stirring. Mix altogether to the required consistence, and bake in a hot oven immediately. The gain from this method of baking is as follows:—four pounds of wheat meal made seven pounds nine ounces of excellent light bread; and four pounds of seconds flour made six pounds of excellent light bread. It keeps moist longer than bread made with yeast, and is far more sweet and digestible. This is especially recommended to persons who suffer from indigestion, who will find the brown bread invaluable. (See 461.)

**2078. SCURF IN THE HEAD.**—A simple and effectual remedy. Into a pint of water drop a lump of fresh quick lime, the size of a walnut; let it stand all night, then pour the water off clear from sediment or deposit, add a quarter of a pint of the best vinegar, and wash the head with the mixture. Perfectly harmless; only wet the roots of the hair. (See 1276.)

**2079. JAUNDICE.**—One penny-worth of allspice, ditto of flowers of brimstone, ditto of turmeric; these to be well pounded together, and afterwards to be mixed with half-a-pound of treacle. Two table-spoonfuls to be taken every day. (See 1247.)

**2080. CRAMP IN THE LEGS.**—Stretch out the heel of the leg as far as possible, at the same time drawing up the toes as far as possible. This will often stop a fit of the cramp after it has commenced.

**2081. CLEAN FURS.**—Strip the fur articles of their stuffing and binding, and lay them as much as possible in a flat position. They must then be subjected to a very brisk brushing, with a stiff clothes brush; after this, any moth-eaten parts must be cut out, and be

neatly replaced by new bits of fur to match. *Sable, chinchilla, squirrel, stoat, &c.*, should be treated as follows:—Warm a quantity of new bran in a pan, taking care that it does not burn, to prevent which it must be actively stirred. When well warmed, rub it thoroughly into the fur with the hand. Repeat this two or three times; then shake the fur, and give it another sharp brushing until free from dust. White furs, ermine, &c., may be cleaned as follows:—Lay the fur on a table, and rub it well with bran made moist with warm water; rub until quite dry, and afterwards with dry bran. The wet bran should be put on with flannel, and the dry with a piece of book-muslin. The light furs, in addition to the above, should be well rubbed with magnesia, or a piece of book-muslin, after the bran process. Furs are usually much improved by stretching, which may be managed as follows: to a pint of soft water add three ounces of salt, dissolve; with this solution sponge the inside of the skin (taking care not to wet the fur), until it becomes thoroughly saturated; then lay it carefully on a board with the fur side downwards, in its natural disposition; then stretch as much as it will bear, and to the required shape, and fasten with small tacks. The drying may be quickened by placing the skin a little distance from the fire or stove.

**2082. WHIST.**—(Upon the principles of Hoyle's games).—Great silence and attention must be observed by the players. Four persons cut for partners; the two highest are against the two lowest. The partners sit opposite to each other, and the person who cuts the lowest card is entitled to the deal. The ace is the lowest in cutting.

Each person has a right to shuffle the cards before the deal; but it is usual for the elder hand only, and the dealer after.

The pack is then cut by the right hand adversary; and the dealer distributes the cards, one by one, to each of the players; beginning with the

person who sits on his left hand until he comes to the last card, which he turns up, being the trump, and leaves on the table till the first trick is played.

The person on the left hand side of the dealer is called the elder, and plays first; whoever wins the trick becomes elder hand, and plays again; and so on, till all the cards are played out.

No intimations or signs of any kind, during the play of the cards, are permitted between the partners. The mistake of one party is the game of the adversary, except in a revoke, when the partners may inquire if he has any of the suit in his hand.

The tricks belonging to each party should be turned and collected by the respective partners of whoever wins the first trick in every hand.

All above six tricks reckon towards the game.

The ace, king, queen, and knave of trumps are called honours; and when either of the partners have three separately, or between them, they count two points towards the game; and in case they have four honours, they count four points.

The game consists of ten points.

2083. TERMS USED IN WHIST. — *Finessing*, is the attempt to gain an advantage; thus:—If you have the best, and third best card of the suit led, you put on the third best, and run the risk of your adversary having the second best; if he has it not, which is two to one against him, you are then certain of gaining a trick.

*Forcing*, is playing the suit of which your partner or adversary has not any, and which he must trump, in order to win.

*Long Trump*, means the having one or more trumps in your hand when all the rest are out.

*Loose card*, means a card in hand of no value, and the most proper to throw away.

*Points*. Ten make the game; as many as are gained by tricks or honours, so many points are set up to the score of the game.

*Quart*, is four successive cards in any suit.

*Quart Major*, is a sequence of ace, king, queen, and knave.

*Quint*, is five successive cards in any suit.

*Quint Major*, is a sequence of ace, king, queen, and ten.

*See-saw*, is when each partner turns a suit, and when they play those suits to each other for that purpose.

*Score*, is the number of points set up. The following is the most approved method of scoring:—

1	2	3	4	5	6	7	8	9
				0	0	00	000	0
0	00	000	0000	00	000	0	0	0

*Slam*, is when either party win every trick.

*Tenace*, is possessing the first and third best cards, and being the last player, you consequently catch the adversary when that suit is played; as, for instance, in case you have ace and queen of any suit, and your adversary leads that suit, you must win two tricks, by having the best and third best of the suit played, and being the last player.

*Terce*, is three successive cards in any suit.

*Terce Major*, is a sequence of ace, king, and queen.

2084. RULES.—1. Lead from your strong suit, and be cautious how you change suits; and keep a commanding card to bring it in again.

2. Lead through the strong suit and up to the weak, but not in trumps, unless very strong in them.

3. Lead the highest of a sequence; but if you have a quart or cinque to a king, lead the lowest.

4. Lead through an honour, particularly if the game is much against you.

5. Lead your best trump, if the adversaries be eight, and you have no honour; but not if you have four trumps, unless you have a sequence.

6. Lead a trump if you have four or five, or a strong hand; but not if weak.

7. Having ace, king, and two or three small cards, lead ace and king, if weak in trumps, but a small one if strong in them.

8. If you have the last trump, with some winning cards, and one losing card only, lead the losing card.

9. Return your partner's lead, not the adversaries; and if you have only three originally, play the best; but you need not return it immediately, when you win with a king, queen, or knave, and have only small ones, or when you hold a good sequence, have a strong suit, or have five trumps.

10. Do not lead from ace queen, or ace knave.

11. Do not lead an ace, unless you have a king.

12. Do not lead a thirteenth card, unless trumps be out.

13. Do not trump a thirteenth card, unless you be last player or want the lead.

14. Keep a small card to return your partner's lead.

15. Be cautious in trumping a card when strong in trumps, particularly if you have a strong suit.

16. Having only a few small trumps, make them when you can.

17. If your partner refuses to trump a suit, of which he knows you have not the best, lead your best trump.

18. When you hold all the remaining trumps play one, and then try to put the lead in your partner's hand.

19. Remember how many of each suit are out, and what is the best card left in each hand.

20. Never force your partner if you are weak in trumps, unless you have a renounce, or want the odd trick.

21. When playing for the odd trick, be cautious of trumping out, especially if your partner be likely to trump a suit; and make all the tricks you can early, and avoid finessing.

22. If you take a trick, and have a sequence, win it with the lowest.

#### 2085. LAWS OF WHIST.

2086. *Dealing*.—1. If a card be turned up in dealing, the adverse party may

call a new deal, unless they have been the cause; then the dealer has the option.

2. If a card be faced in the deal, the dealer must deal again, unless it be the last deal.

3. If any one play with twelve cards, and the rest have thirteen, the deal to stand good, and the player to be punished for each revoke; but, if any have fourteen cards, the deal is lost.

4. The dealer to leave the trump card on the table till his turn to play; after which none may ask what card was turned up, only what is trumps.

5. No person may take up the cards while dealing; if the dealer in that case should miss the deal, to deal again, unless his partner's fault; and if a card be turned up in dealing, no new deal, unless the partner's fault.

6. If the dealer put the trump card on the rest, with face downwards, he is to lose the deal.

2087. *Playing out of turn*.—7. If any person play out of his turn, the adversary may call the card played at any time, if he do not make him revoke; or if either of the adverse party be to lead, may desire his partner to name the suit, which must be played.

8. If a person supposes he has won the trick, and leads again before his partner has played, the adversary may oblige his partner to win it, if he can.

9. If a person lead, and his partner play before his turn, the adversary's partner may do the same.

10. If the ace, or any other card of a suit, be led, and any person play out of turn, whether his partner have any of the suit led or not, he is neither to trump it nor win it, provided he do not revoke.

2088. *Revoling*.—11. If a revoke happen to be made, the adversary may add three to their score, or take three tricks from them, or take down three from their score; and, if up, must remain at nine.

12. If any person revoke, and, before the cards be turned, discover it, the adversary may cause the highest or

lowest of the, suit led, or call the card then played at any time, if it do not cause a revoke.

13. No revoke to be claimed till the trick be turned and quitted, or the party who revoked, or his partner, have played again.

14. If any person claim a revoke, the adverse party are not to mix their cards, upon forfeiting the revoke.

15. No revoke can be claimed after the cards are out for a new deal.

2089. *Calling honours*.—16. If any person call, except at the point of eight, the adverse party may consult, and have a new deal.

17. After the trump card is turned up, no person may remind his partner to call, on penalty of losing one point.

18. If the trump card be turned up, no honours can be set up, unless before claimed; and scoring honours, not having them, to be scored against them.

19. If any person call at eight, and be answered, and the opposite parties have thrown down their cards, and it appear they have not their honours, they may consult, and have a new deal or not.

20. If any person answer without an honour, the adversaries may consult and stand the deal or not.

21. If any person call at eight, after he has played, the adversaries may call a new deal.

2090. *Separating and Showing the Cards*.—22. If any person separate a card from the rest, the adverse party may call it if he name it; but, if he call a wrong card, he or his partner are liable for once, to have the highest or lowest card called in any suit led during that deal.

23. If any person throw his cards on the table, supposing the game lost, he may not take them up, and the adversaries may call them, provided he do not revoke.

24. If any person be sure of winning every trick in his hand, he may show his cards, but is liable to have them called.

2091. *Omitting to play to a Trick*.—25. If any person omit to play to a trick,

and it appear he has one card more than the rest, it shall be at the option of the adversary to have a new deal.

2092. *Respecting who played a Particular Card*.—26. Each person ought to lay his card before him; and if either of the adversaries mix their cards with his, his partner may demand each person to lay his card before him, but not to inquire who played any particular card.

These laws are agreed to by the best judges.

#### 2093. MAXIMS FOR WHIST.

2094. *Leader*.—1. Begin with the suit of which you have most in number; for, when the trumps are out, you will, probably, make several tricks by it.

2. If you hold equal numbers in different suits, begin with the strongest, because it is the least liable to injure your partner.

3. Sequences are always eligible leads, as supporting your partner without injuring your own hand.

4. Lead from a king or queen, rather than from an ace; for, since the adversaries will lead from those suits which you do not, your ace will do them most harm.

5. Lead from a king rather than a queen, and from a queen rather than from a knave; for the stronger the suit, the less is your partner endangered.

6. Lead not from ace queen, or ace knave, till necessary; for, if that suit be led by the adversaries, you have a good chance of making two tricks in it.

7. In all sequences to a queen, knave, or ten, begin with the highest, because it will frequently distress your left-hand adversary.

8. Having ace, king, and knave, lead the king; for, if strong in trumps, you may wait the return of this suit, and finesse the knave.

9. Having ace, queen, and one small card, lead the small one; for, by this lead, your partner has a chance to make the knave.

10. Having ace, king, and two or three small cards, play ace and king, if weak, but a small card, if strong in

trumps, you may give your partner the chance of making the first trick.

11. Having king, queen, and one small card, play the small one; for your partner has an equal chance to win, and you need not fear to make king or queen.

12. Having king, queen, and two or three small cards, lead a small card, if strong, and the king if weak in trumps; for strength in trumps entitles you to play a backward game, and give your partner a chance of winning the first trick; but, if weak in trumps, lead the king or queen, to secure a trick in that suit.

13. Having an ace, with four small cards, and no other good suit, play a small card, if strong in trumps, and the ace if weak; for strength in trumps may enable you to make one or two of the small cards, although your partner cannot support the lead.

14. Having king, knave, and ten, lead the ten; for, if your partner hold the ace, you have a good chance to make three tricks, whether he pass the ten or not.

15. Having king, queen, and ten, lead the king; for, if it fail, by putting on the ten, upon the return of that suit from your partner, you have a chance of making two tricks.

16. Having queen, knave, and nine, lead the queen; for, upon the return of that suit from your partner, by putting on the nine, you will, probably, make the knave.

2095. *Second Hand*.—1. Having ace, king, and small ones, play a small card, if strong in trumps, but the king if weak in them; for, otherwise, your ace or king might be trumped, in the latter case, and no hazards should be run with few trumps but in critical cases.

2. Having ace, queen, and small cards, play a small one, for, upon the return of that suit, you will, probably, make two tricks.

3. Having ace, knave, and small cards, play a small one, for, upon the return of that suit, you will, perhaps, make two tricks.

4. Having ace, ten, or nine, with small cards, play a small one, for, by this method, you have a chance of making two tricks in the suit.

5. Having king, queen, ten, and small cards, play the queen; for, by playing the ten upon the return of the suit, you will, probably, make two tricks in it.

6. Having king, queen, and small cards, play a small card if strong in trumps, but the queen if weak in them; for strength in trumps warrants playing a backward game, and it is always advantageous to keep back your adversaries' suit.

7. If you hold a sequence to your highest card in the suit, play the lowest of it, for, by this means, your partner will be informed of your strength.

8. Having queen, knave, and small ones, play the knave, because you will, probably, secure a trick.

9. Having queen, ten, and small ones, play a small one, for your partner has an equal chance to win.

10. Having either ace, king, queen, or knave, with small cards, play a small one, for your partner has an equal chance to win the trick.

11. Having either ace, king, queen, or knave, with one small card only, play the small one, for, otherwise, your adversary will finesse upon you.

12. If a queen be led, and you hold the king, put that on, for if your partner hold the ace, you do no harm; and, if the king be taken, the adversaries have played two honours to one.

14. If a king be led, and you hold ace, knave, and small ones, play the ace, for it cannot do the adversary a greater injury.

2096. *Third Hand*.—1. Having ace and king, play the ace and return the king, because you should not keep the command of your partner's strong suit.

2. Having ace and queen, play the ace, and return the queen; for, although it may prove better in some cases to put on the queen, yet, in gene-

ral, your partner is best supported by this method.

3. Having ace and knave, play the ace and return the knave, in order to strengthen your partner's hand.

4. Having king and knave, play the king; and, if it win, return the knave, for the reason in No. 3.

5. Always play the best when your partner plays a small card, as it best supports your partner.

6. If you hold the ace and one small card only, and your partner lead the king, put on the ace, and return the small one; for, otherwise, your ace will be an obstruction to his suit.

7. If you hold the king and one small card only, and your partner lead the ace, if the trumps be out, play the king; for, by putting on the king, there will be no obstruction to the suit.

2097. *Fourth Hand.*—1. If a king be led, and you hold ace, knave, and a small card, play the small one; for, supposing the queen to follow, you probably make both ace and knave.

2. When the third hand is weak in his partner's lead, you may often return that suit to great advantage; but this rule must not be applied to trumps, unless you are very strong indeed.

2098. *Cases in which you should return your partner's lead immediately.*—1. When you win with the ace and can return an honour, for that will greatly strengthen his hand.

2. When he leads a trump, in which case, return the best remaining in your hand (unless you held four originally), except the lead be through an honour.

3. When your partner has trumped out; for then it is evident he wants to make his great suit.

4. When you have no good card in any other suit; for then you entirely depend on your partner.

2099. *Cases in which you should not return your partner's lead immediately.*—1. If you win with the king, queen, or knave, and have only small cards left; for the return of a small card will

more distress than strengthen your partner.

2. If you hold a good sequence; for then you may show a strong suit, and not injure his hand.

3. If you have a strong suit; because leading from a strong suit directs your partner, and cannot injure him.

4. If you have a good hand; for, in this case, you ought to consult your own hand.

5. If you hold five trumps; for then you are warranted to play trumps, if you think it right.

2100. *Leading Trumps.*—1. Lead trumps from a strong hand, but never from a weak one, by which means you will secure your good cards from being trumped.

2. Trump not out with a bad hand, although you hold five small trumps; for, since your cards are bad, it is only trumping for the adversaries' good ones.

3. Having ace, king, knave, and three small trumps, play ace and king; for the probability of the queen's falling is in your favour.

4. Having ace, king, knave, and one or two small trumps, play the king, and wait the return from your partner to put on the knave, in order to win the queen; but, if you particularly wish the trumps out, play two rounds, and then your strong suit.

5. Having ace, king, and two or three small trumps, lead a small one; this is to let your partner win the first trick; but, if you have good reason for getting out the trumps, play three rounds, or play ace and king, and then proceed with your strong suit.

6. If your adversaries be eight, and you do not hold an honour, throw off your best trump, for, if your partner has not two honours, you have lost the game: and, if he holds two honours, it is most advantageous to lead a trump.

7. Having ace, queen, knave, and small trumps, play the knave; for, by this means, the king only can make against you.

8. Having ace, queen, ten, and one or two small trumps, lead a small one,

for it will give your partner a chance to win the trick, and keep the command in your own hand.

9. Having king, queen, ten, and small trumps, lead the king; for, if the king be lost, upon the return of trumps, you may finesse the ten.

10. Having king, knave, ten, and small ones, lead the knave, because it will prevent the adversaries from making a small trump.

11. Having queen, knave, nine, and small trumps, lead the queen; for, if your partner hold the ace, you have a good chance of making the whole suit.

12. Having queen, knave, and two or three small trumps, lead the queen, for the reason in No. 11.

13. Having knave, ten, eight, and small trumps, lead the knave; for, on the return of trumps, you, probably, may finesse the eight to advantage.

14. Having knave, ten, and three small trumps, lead the knave, because it will most distress your adversaries, unless two honours are held on your right hand; the odds against which are about three to one.

15. Having only small trumps, play the highest; by which you will support your partner all you can.

16. Having a sequence, begin with the highest; by this means, your partner is best instructed how to play his hand, and cannot possibly be injured.

17. If any honour be turned up on your left, and the game much against you, lead a trump the first opportunity; for, your game being desperately bad, this method is the most likely to retrieve it.

18. In all other cases it is dangerous leading through an honour, unless you be strong in trumps, or have a good hand; because all the advantage of trumping through an honour lies in your partner's finessing.

19. Supposing it hereafter proper to lead trumps, when an honour is turned up on your left, you, holding only one honour, with a small trump, play the

honour, and next the small one; because it will greatly strengthen your partner's hand, and cannot hurt your own.

20. If an honour be turned up on the left, and you hold a sequence, lead the highest of it, because it will prevent the last hand from injuring your partner.

21. If a queen be turned up on the left, and you hold ace, king, and a small one, lead the small trump, because you will have a chance of getting the queen.

22. If a queen be turned up on the left, and you hold a knave, with small ones, lead the knave; for the knave cannot be of service, as the queen is on your left.

23. If an honour be turned up by your partner, and you strong in trumps, lead a small one; but, if weak in them, lead the best you have; by this play the weakest hand will support the strongest.

24. If an ace be turned up on the right, you holding king, queen, and knave, lead the knave: a secure lead.

25. If an ace be turned up on the right, and you hold king, queen, and ten, lead the king, and upon the return of trumps play the ten; for, by this means, you show a great strength to your partner, and will, probably make two tricks in them.

26. If a king be turned up on the right, and you hold queen, knave, and nine, lead knave, and, upon the return of trumps, play the nine, because it may prevent the ten from making.

27. If a king be turned up on your right, and you hold knave, ten, and nine, lead the nine, and, upon the return of trumps, play the ten; because this method will best disclose your strength in trumps.

28. If a queen be turned up on the right, and you hold ace, king, and knave, lead the king, and, upon the return of trumps, play the knave, because you are then certain to make the knave.

29. If a queen be turned up on the right, and you hold ace, king, and small ones, lead the king; and, upon the return of trumps, you may finesse, unless the queen falls, for otherwise, the queen will make a trick.

30. If a knave be turned up on the right, and you hold king, queen, and ten, lead the queen, and, upon the return of trumps, play the ten; for, by this means, you will make the ten.

31. If a knave be turned up on the right, and you hold king, queen, and small ones, lead the king; and, if that come home, play a small one, for it is probable your partner holds the ace.

32. If a knave be turned up on the right, and you hold king and ten or queen and ten, with two small cards, lead a small one; and, upon the return of trumps play the ten, for it is five to four that your partner holds one honour.

2101. *When you turn up an Honour.*

—1. If you turn up an ace, and hold only one small trump with it, if either adversary lead the king, put on the ace.

2. But, if you turn up an ace, and hold two or three small trumps with it, and either adversary lead the king; put on a small one; for, if you play the ace, you give up the command in trumps.

3. If you turn up the king, and hold only one small trump with it, and your right hand adversary lead a trump, play the king.

4. If you turn up a king, and hold two or three small trumps with it, if your right hand adversary lead a trump, play a small one.

5. If you turn up a queen or knave, and hold, besides, only small trumps, if your right hand adversary lead a trump, put on a small one.

6. If you hold a sequence to the honour turned up, play it last.

2102. *Playing for the Odd Trick.*—1. Be cautious of trumping out, notwithstanding you have a good hand.

2. Never trump out if your partner appears likely to trump a suit.

3. If you are moderately strong in trumps, force your partner, for by this you probably make a trick.

4. Make your tricks early, and be cautious of finessing.

5. If you hold a single card of any suit, and only two or three small trumps, lead the single card.

#### 2103. CALCULATIONS.

1. It is about five to four that your partner holds one card out of any two.

2. It is about five to two that he holds one card out of three.

3. It is about four to one that he holds one card out of any four.

4. It is two to one that he does not hold a certain card.

5. It is about three to one that he does not hold two cards out of any three.

6. It is about three to two that he does not hold two cards out of any four.

2104. CRIBBAGE.—The game of Cribbage differs from all other games by its immense variety of chances. It is reckoned useful to young people in the science of calculation. It is played with the whole pack of cards, generally by two persons, and sometimes by four. There are also five different modes of playing—that is, with five, six, or eight cards; but the games are principally those with five and six cards. The rules vary a little in different companies, but the following are those most generally observed:—

2105. TERMS USED IN CRIBBAGE.—*Crib.* The cards thrown away by each party, and the dealer is entitled to score whatever points are made by them.

*Pairs* are two similar cards, as two aces or two kings. Whether in hand or playing they reckon for two points.

*Pairs Royal* are three similar cards, and reckon for six points, whether in hand or playing.

*Double Pairs Royal* are four similar cards, and reckon for twelve points, whether in hand or playing. The points gained by pairs, pairs royal, and

double pairs royal, in playing, are thus effected:—Your adversary having played a seven and you another, constitutes a pair, and entitles you to score two points; your antagonist then playing a third seven, makes a pair royal, and he marks six; and your playing a fourth is a double pair royal, and entitles you to twelve points.

*Fifteens.* Every fifteen reckons for two points, whether in hand or playing. In hand they are formed either by two cards, such as a five and any tenth card, a six and a nine, a seven and an eight, or by three cards, as a two, a five, and an eight, &c. And in playing thus, if such cards are played as make together fifteen, the two points are to be scored towards the game.

*Sequences* are three or four more successive cards, and reckon for an equal number of points, either in hand or play. In playing a sequence, it is of no consequence which card is thrown down first; as thus: your adversary playing an ace, you a five, he a three, you a two, then he a four, he counts five for the sequence.

*Flush.* When the cards are all of one suit, they reckon for as many points as there are cards. For a flush in the crib, the card turned up must be of the same suit as those put out in the crib.

*Noddy.* The knave of the suit turned up reckons for one point; if a knave be turned up, the dealer is to mark two; but it cannot be reckoned again; and when played it does not score anything.

*End Hole.* The point scored by the last player, if he makes under thirty-one; if he makes thirty-one exactly, he is to mark two. To obtain either of these is considered a great advantage.

*Last.* Three points taken at the commencement of the game of five-card cribbage by the non-dealer.

2106. RULES OF CRIBBAGE.—1. The adverse parties cut the cards to determine who shall be dealer; the lowest card has it. The ace is the lowest.

2. In dealing, the dealer may dis-

cover his own cards but not those of his adversary—who may mark two, and call a fresh deal.

3. Should too many cards be dealt to either, the non-dealer may score two, and demand another deal, if the error be detected previous to taking up the cards; if he do not wish a new deal, the extra cards must be drawn away; when any player has more than the proper number of cards in hand, the opponent may score four, and call a new deal.

4. If any player meddle with the pack after dealing, till the period of cutting it for the turn-up card, then his opponent may score two points.

5. If any player take more than he is entitled to, the other party should not only put him back as many points as are overscored, but likewise take the same extra number for his own game.

6. Should either party even meddle with his own pegs unnecessarily, the opponent may score two points; and if any one take out his front peg, he must place the same back behind the other. If any be misplaced by accident, a bystander may replace the same, according to the best of his judgment; but he should never otherwise interfere.

7. If any player neglect to set up what he is entitled to, the adversary is allowed to take the points so omitted.

8. Each player may place his own cards, when done with, upon the pack.

9. In five-card cribbage, the cards are to be dealt one by one; but when played with six cards, then it is customary to give three, and if with eight cards, four at a time.

10. The non-dealer, at the commencement of the game, in five-card cribbage, scores three points, called *three for last*; but in six and eight-card cribbage this is not to be done.

11. In what is called the Bath game, they reckon flushes upon the board; that is, when three cards of the same suit are played successively, the party playing the third scores three points;

if the adversary play a fourth of the same suit, then he is to score four, and so on for four, five, six, or as long as the same suit continues to be played in uninterrupted succession, and that the whole number of pips do not reckon thirty-one.

**2107. FIVE-CARD CRIBbage.**—It is unnecessary to describe cribbageboards; the sixty-one points or holes marked thereon make the game. We have before said, that the party cutting the lowest card deals; after which, each player is first to lay out two of the five cards for the crib, which always belongs to the dealer; next, the adversary is to cut the remainder of the pack, and the dealer to turn up and lay upon the crib the uppermost card, for which, if a knave, he is to mark two points. The card turned up is to be reckoned by both parties, whether in showing their hands or crib. After laying-out and cutting as above-mentioned, the eldest hand is to play a card, which the other should endeavour to pair, or find one, the pips of which, reckoned with the first, will make fifteen; then the non-dealer must play another card, and try to make a pair, pair-royal, sequence, flush (where allowed of) or fifteen, provided the cards already played have not exceeded that number; and so on alternately, until the pips on the cards played make thirty-one, or the nearest possible number under that.

When the party, whose turn it may be to play, cannot produce a card that will make thirty-one, or come under that number he is then to say Go to his antagonist, who, thereupon, will be entitled to score one, or must play any card or cards he may have that will make thirty-one, or under; and if he can make exactly thirty-one, he is to take two points; if not, one; the last player has often opportunity this way to make pairs or sequences. Such cards as remain after this are not to be played; but each party having, during the play, scored his points gained, in the

manner before directed, must proceed; the non-dealer first to count and take for his hand, then the dealer for his hand, and also for his crib, reckoning the cards every way they can possibly be varied, and always including the turned-up-card.

Points

For every fifteen . . . . .	2
Pair, or two of a sort . . . . .	2
Pair-royal, or three of a sort . . .	6
Double pair-royal, or four ditto	12
Knave of the turned-up suit . . .	1
Sequences and flushes whatever number.	

**2108. MAXIMS FOR LAYING OUT THE CRIB CARDS.**—It is always requisite in laying out cards for the crib, that every player should consider not only his own hand, but also to whom the crib belongs, as well as the state of the game; for what might be proper in one situation would be highly imprudent in another. When any player possesses a pair-royal, it is generally advisable to lay out the other cards, for crib, unless it belongs to the adversary, and they consist of two fives, a deuce and a trois, five and six, seven and eight, five and any other tenth card, or that the game be almost finished. A player, when he does not thereby materially injure his hand, should for his own crib, lay out close cards, in hope of making a sequence, or two of a suit, in expectation of a flush; or any that of themselves amount to fifteen, or such as reckoned with others will make that number, except when the antagonist be nearly up, and it may be expedient to keep such cards that probably may prevent him from gaining at play. The direct contrary method should be pursued in respect to the adversary's crib, which each person should endeavour to baulk, by laying out those cards that are not likely to prove to advantage, unless at such a stage of the game, when it may be of consequence to keep in hand cards likely to tell in play, or when the non-dealer would be either out by his hand, or has reason for judging the crib of little moment. A

king is the best card to baulk a crib, as none can form a sequence beyond it, except in some companies, where king, queen, ace, are allowed as a sequence; and either a king or queen, with an ace, six, seven, eight, or nine, are good ones to put out. Low cards are generally the most likely to gain at play; the flushes and sequences, particularly if the latter be also flushes, are, the most part, eligible hands, as thereby the player will often be enabled either to assist his own crib, or baulk that of the opponent, to whom a knave should never be given, if with propriety it can be retained.

2109. THREE OR FOUR-HAND CRIBBAGE.—Differs only from the preceding, as the parties put out but one card each to the crib, and when thirty-one, or near as can be, has been made, then the next eldest hand leads, and the players go on again in rotation, with any remaining cards, till all are played out before they proceed to show. For three-hand cribbage triangular boards are used.

A sort of three-hand cribbage is sometimes played, wherein one person sits out, not each game, but each deal in rotation. In this the first dealer generally wins.

The chances in this game are often so great that even between skilful gamers, it is possible, at five-card cribbage, when the adversary is fifty-six, for a lucky player, who had not previously made a single hole, to be more than up in two deals, his opponent getting no further than sixty in that time; and in four-hand cribbage a case may occur, wherein none of the parties hold a single point in hand, and yet the dealer and his friend, with the assistance of a knave turned up, may make sixty-one by play in one deal, while the adversaries only get twenty-four; and although this may not happen for many years, yet similar games may now and then be met with.

2110. SIX-CARD CRIBBAGE, varies from that played with five, as the players (always only two) commence on an

equality, without scoring any points for the last, retain four cards in hand and all the cards are to be played out, as in three and four-hand cribbage, with five cards. At this game it is of advantage to the last player to keep as close as possible, in hopes of coming in for fifteen, a sequence, or pair, besides the end hole, or thirty-one. The first dealer is reckoned to have some trifling advantage, and each player may, on the average, expect to make twenty-five points in every two deals. The first non-dealer is considered to have the preference, when he gains ten or more the first hand, the dealer not making more than his average number.

Twenty-nine is the greatest possible number that can be gained by the show of any hand or crib, either in five or six-card cribbage; it is composed of three fives and a knave, with a fourth five, of the same suit as the knave turned up; this very seldom happens; but twenty-four is an uncommon number, and may be formed of four threes and a nine, or two fours, one five, and two sixes; and some other combinations that experience will point out.

2111. EIGHT-CARD CRIBBAGE, is sometimes played, but very seldom.

Some ingenious people, in London, invented a game of chance, they styled playing at cribbage by hackney-coaches; that is, two persons placed themselves at a window in some great thoroughfare street, one would take all the coaches from the right, the other from the left; the figures on the doors of the carriages were reckoned as cards in show, and every person that happened to sit, stand, or hold at the back of any of them, was called a noddy, and scored one.

#### 2112. ODDS OF THE GAME.

The average number estimated to be held from the cards in hand is rather more than four, and under five; to be gained in play; two for the dealer, and one for the adversary, making in all an average of six throughout the game; the probability of the crib is five; so that each player ought to make sixteen

in two deals: by which it will appear the dealer has somewhat the advantage, supposing the cards to run equal, and the players well matched. By attending to this calculation, any person may judge whether he be at home or not, and thereby play his game accordingly: either making a grand push when he is behind and holds good cards, or endeavouring to balk his adversary when his hand proves indifferent.

2113. ALL-FOURS is usually played by two persons; not unfrequently by four. Its name is derived from the four chances, called *high*, *low*, *Jack*, *game*, each making a point. A complete pack of cards must be provided, six of which are to be dealt to each party, three at a time; and the next card, the thirteenth, is to be turned up for the trump by the dealer, who, if it prove a knave, is to score one point. The party who cuts the highest card is to deal first. The cards rank in the same manner as at whist, for whoever scores the first ten points wins.

2114. LAWS OF ALL-FOURS.—1. A new deal can be demanded, if in dealing the dealer discovers any of the adversary's cards; if, to either party, too many cards have been dealt; in the latter case, it is optional with the parties, provided it be done before a card has been played, but not after, to draw from the opposing hand the extra card.

2. If the dealer expose any of his own cards, the deal is to stand good.

3. No person can beg more than once in each hand, except by mutual agreement.

4. Each party must trump or follow suit if they can, on penalty of the adversary scoring one point.

5. If either player score wrong, it must be taken down, and the adversary shall either score four points or one, as may have previously been agreed.

6. When a trump be played, it is

allowable to ask the adversary if it be either high or low.

7. One card may count all-fours; for example, the eldest hand holds the knave and stands his game, the dealer has neither trump, ten, ace, nor court-card, it will follow that the knave will be both high, low, Jack, and game, as explained by

2115. TERMS USED IN ALL-FOURS.—*High*, The highest trump out, the holder to score one point.

*Low*, The lowest trump out, the original holder to score one point, even if it be taken by the adversary.

*Jack*, The knave of trumps, the holder to score one, unless it be won by the adversary, in that case the winner is to score the point.

*Game*, The greatest number that, in the trick gained, can be shown by either party; reckoning—

*Four* for an ace. | *One* for a knave.

*Three* for a king. | *Ten* for a ten.

*Two* for a queen.

The other cards do not count, thus it may happen that a deal may be played without having any to reckon for game.

*Begging* is when the eldest hand, disliking his cards, uses his privilege, and says, "*I beg*;" in which case, the dealer must either suffer his adversary to score one point, saying "*take one*," or give each three cards more from the pack, and then turn up the next card, the seventh, for trumps; if, however, the trump turned up be of the same suit as the first, the dealer must go on, giving each three cards more, and turning up the seventh, until a change of suit for trumps shall take place.

2116. MAXIMS.—1. Always make your knave as soon as you can.

2. Strive to secure your tens: this is to be done by playing any small cards, by which you may throw the lead into your adversary's hand.

3. Win your adversary's best cards when you can, either by trumping or with superior cards.

4. If, being eldest hand, you hold either ace, king, or queen of trumps, without the knave or ten, play them immediately, as, by this means, you have a chance to win the knave or ten.

2117. DOMINO.—This game is played by two or four persons, with twenty-eight pieces of oblong ivory, plain at the back, but on the face divided by a black line in the middle, and indented with spots, from one to a double-six, which pieces are a double-blank, ace-blank, double-ace, deuce-blank, deuce-ace, double-deuce, trois-blank, trois-ace, trois-deuce, double-trois, four-blank, four-ace, four-deuce, four-trois, double-four, five-blank, five-ace, five-deuce, five-trois, five-four, double-five, six-blank, six-ace, six-deuce, six-trois, six-four, six-five, and double-six. Sometimes a double set is played with, of which double-twelve is the highest.

At the commencement of the game, the dominos are well mixed together with their faces upon the table. Each person draws one, and if four play, those who choose the two highest are partners, against those who take the two lowest; drawing the latter also serves to determine who is to lay down the first piece, which is reckoned a great advantage. Afterwards each player takes seven pieces at random. The eldest hand having laid down one, the next must pair him at either end of the piece he may choose, according to the number of pips, or the blank in the compartment of the piece; but whenever any one cannot match the part, either of the domino last put down, or of that unpaired at the other end of the row, then he says *go*; and the next is at liberty to play. Thus they play alternately, either until one party has played all his pieces, and thereby won the game, or till the game be *blocked*; that is, when neither party can play, by matching the pieces where unpaired at either end; then that party wins who has the smallest number of pips on the pieces remaining in their possession. It

is to the advantage of every player to dispose himself as early as possible of the heavy pieces, such as a double-six, five, four, &c.

Sometimes, when two persons play, they take each only seven pieces, and agree to *play or draw*, i. e., when one cannot come in, or pair the pieces upon the board at the end unmatched, he then is to draw from the fourteen pieces in stock till he find one to suit.

This game requires strict attention, and nothing but practice will make a skilful player.

2118. LOO.—Loo, or lue, is subdivided into limited and unlimited loo, is a game, the complete knowledge of which can easily be acquired; it is played two ways, both with five and three cards, though most commonly with five, dealt from a whole pack, either first three and then two, or by one at a time. Several persons may play together, but the greatest number can be admitted when with three cards only.

After five cards have been given to each player another is turned up for trump; the knave of clubs generally, or sometimes the knave of the trump suit, as agreed upon, is the highest card, and is styled *pam*; the ace of trumps is next in value, and the rest in succession, as at whist. Each player has the liberty of changing for others, from the pack, all or any of the five cards dealt, or of throwing up the hand, in order to escape being looted. Those who play their cards, either with or without changing, and do not gain a trick, are looted; as is likewise the case with all who have stood the game, when a flush or flushes occur; and each, excepting any player holding *pam*, of an inferior flush, is required to deposit a stake, to be given to the person who sweeps the board, or divided among the winners at the ensuing deal, according to the tricks which may then be made. For instance, if every one at dealing stakes half-a-crown, the tricks are entitled to sixpence a-

piece, and whoever is loosed must put down half-a-crown, exclusive of the deal; sometimes it is settled that each person loosed shall pay a sum equal to what happens to be on the table at the time. Five cards of a suit, or four with pam, compose a flush, which sweeps the board, and yields only to a superior flush, or the elder hand. When the ace of trumps is led, it is usual to say, "*Pam, be civil;*" the holder of which last-mentioned card is then expected to let the ace pass.

When loo is played with three cards, they are dealt by one at a time, pam is omitted, and the cards are not exchanged, nor permitted to be thrown up.

2119. PUT.—The game of put is played with an entire pack of cards, generally by two, but sometimes by four persons. At this game the cards have a different value from all others. The best card in the pack is a *trois*, or three; the next a *deuce*, or two; then come in rotation, as at other games, the ace, king, queen, knave, ten, &c. The dealer distributes three cards to each player, by one at a time. whoever cuts the lowest card has the deal, and five points make the game, except when both parties say, "*I put*"—for then the score is at an end, and the contest is determined in favour of that party who may win two tricks out of three. When it happens that each player has won a trick, and the third is a tie—that is, covered by a card of equal value—the whole goes for nothing, and the game must begin anew.

2119\*. TWO-HANDED PUT.—The eldest hand should play a card; and whether the adversary pass it, win it, or tie it, you have a right either to say, "*I put*," or place your cards on the pack. If you accept the first, and your opponent decline the challenge, you score one: if you prefer the latter, your adversary gains a point; but if, before he play, your opponent says, "*I put*," and you do not choose to see him, he is entitled to add one to his score. It is some-

times good play to say, "*I put*," before you play a card: this depends on the nature of your hand.

2120. FOUR-HANDED PUT.—Each party has a partner, and when three cards are dealt to each, one of the players gives his partner his best card, and throws the other two away: the dealer is at liberty to do the same to his partner, and *vice versa*. The two persons who have received their partners' cards play the game, previously discarding their worst card for the one they have received from their partners. The game then proceeds as at two-handed put.

2121. LAWS OF PUT.—1. When the dealer accidentally discovers any of his adversary's cards, the adversary may demand a new deal.

2. When the dealer discovers any of his own cards in dealing, he must abide by the deal.

3. When a faced card is discovered during the deal, the cards must be reshuffled, and dealt again.

4. If the dealer gives his adversary more cards than are necessary, the adversary may call a fresh deal, or suffer the dealer to draw the extra cards from his hand.

5. If the dealer give himself more cards than are his due, the adversary may add a point to his game, and call a fresh deal if he pleases, or draw the extra cards from the dealer's hand.

6. No bystander must interfere, under penalty of paying the stakes.

7. Either party saying, "*I put*"—that is, I play—cannot retract, but must abide the event of the game, or pay the stakes.

2122. SPECULATION is a noisy round game, at which several may play, using a complete pack of cards, bearing the same import as at whist, with fish or counters, on which such a value is fixed as the company may agree. The highest trump in each deal wins the pool; and whenever it happens that not one is dealt, then the company pool again, and the event is decided by the

succeeding coup. After determining the deal, &c. the dealer pools six fish, and every other player four; then three cards are given to each, by one at a time, and another turned up for trump. The cards are not to be looked at except in this manner: The eldest hand shows the uppermost card, which, if a trump, the company may speculate on, or bid for—the highest bidder buying and paying for it, provided the price offered be approved of by the seller. After this is settled, if the first card does not prove a trump, then the next eldest is to show the uppermost card, and so on—the company speculating as they please, till all are discovered, when the possessor of the highest trump, whether by purchase or otherwise, gains the pool. To play at speculation well, a recollection only is requisite of what superior cards of that particular suit have appeared in the preceding deals, and calculating the probability of the trump offered proving the highest in the deal then undetermined.

**2123. CONNEXIONS.**—Three or four persons may play at this game. If the former number, ten cards each are to be given; but if the latter, only eight are dealt, and bear the same import as at whist, except that diamonds are always trumps. The connexions are formed as follows:

1. By the two black aces.
2. The ace of spades and king of hearts.
3. The ace of clubs and king of hearts.

For the first connexion 2s. are drawn from the pool; for the second, 1s.; for the third, and by the winner of the majority in tricks, 6d. each is taken. These sums are supposing gold staked: when only silver is pooled, then pence are drawn. A trump played in any round where there is a connexion wins the trick, otherwise it is gained by the player of the first card of connexions; and, after a connexion, any following player may trump without incurring a

revoke; and, also, whatever suit may be led, the person holding a card of connexion is at liberty to play the same; but the others must, if possible, follow suit, unless one of them can answer the connexion, which should be done in preference. No money can be drawn till the hands are finished; then the possessors of the connexions are to take first according to precedence, and those having the majority of tricks take last.

**2124. MATRIMONY.**—The game of matrimony is played with an entire pack of cards, by any number of persons from five to fourteen. It consists of five chances, usually marked on a board, or sheet of paper, as follows:—

This game is generally played with counters, and the dealer puts what he pleases on each or any chance, the other players depositing each the same quantity, except one—that is, when the dealer stakes twelve, the rest of the company lay down eleven each. After this, two cards are dealt round to every one, beginning on the left; then to each person one other card, which is turned up, and he who so happens to get the ace of diamonds sweeps all. If it be not turned up, then each player shows his hand; and any of them having matrimony, intrigue, &c., takes the counters on that point; and when two or more people happen to have a similar combination, the eldest hand has the preference; and, should any chance not be gained, it stands over to the next deal.—*Observe:* The ace of diamonds turned up takes the whole pool, but when in hand ranks only as any other ace; and it not turned up, nor any ace in hand,

then the king, or next superior card, wins the chance styled best.

**2125. POPE JOAN.**—Pope, a game somewhat similar to that of matrimony, is played by a number of people, who generally use a board painted for this purpose, which may be purchased at most turners' or toy shops. The eight of diamonds must first be taken from the pack, and after setting the deal, shuffling, &c., the dealer dresses the board, by putting first, counters, or other stakes, one each to ace, king, queen, knave, and game; two to matrimony, two to intrigue, and six to the nine of diamonds, styled Pope. This dressing is, in some companies, at the individual expense of the dealer, though, in others, the players contribute two stakes a-piece towards the same. The cards are next to be dealt round equally to every player, one turned up for trump, and about six or eight left in the stock to form stops; as, for example, if the ten of spades be turned up, the nine consequently becomes a stop; the four kings and the seven of diamonds, are always fixed stops, and the dealer is the only person permitted, in the course of the game, to refer occasionally to the stock for information what other cards are stops in their respective deals. If either ace, king, queen, or knave happen to be the turned-up trump, the dealer may take whatever is deposited on that head; but when pope be turned up, the dealer is entitled both to that and the game, besides a stake for every card dealt to each player. Unless the game be determined by pope being turned up, the eldest hand must begin by playing out as many cards as possible; first the stops, then pope, if he have it, and afterwards the lowest card of his longest suit, particularly an ace, for that never can be led through; the other players are to follow, when they can, in sequence of the same suit, till a stop occurs, and the party having the stop thereby becomes eldest hand, and is to lead accordingly; and so on, until

some person part with all his cards, by which he wins the pool (game), and becomes entitled besides to a stake for every card not played by the others, except from any one holding pope, which excuses him from paying; but if pope has been played, then the party having held it is not excused. King and queen form what is denominated matrimony; queen and knave make intrigue, when in the same hand; but neither these, nor ace, king, queen, knave, or pope, entitle the holder to the stakes deposited thereon, unless played out; and no claim can be allowed after the board be dressed for the succeeding deal; but in all such cases the stakes are to remain for future determination. This game only requires a little attention to recollect what stops have been made in the course of the play; as, for instance, if a player begin by laying down the eight of clubs, then the seven in another hand forms a stop, whenever that suit be led from any lower card; or the holder, when eldest, may safely lay it down, in order to clear his hand.

**2126. CASSINO.**—The game of casino is played with an entire pack of cards, generally by four persons, but sometimes by three, and often by two.

**2127. TERMS USED IN CASSINO.**—*Great Cassino*, the ten of diamonds which reckons for two points.

*Little Cassino*, the two of spades, which reckons for one point.

*The Cards* is when you have a greater share than your adversary, and reckons for three points.

*The Spades* is when you have the majority of that suit, and reckons for one point.

*The Aces*: each of which reckons for one point.

*Lurched* is when your adversary has won the game before you have gained six points.

In some deals at this game it may so happen that neither party win anything, as the points are not set up

according to the tricks, &c., obtained; but the smaller number is constantly subtracted from the larger, both in cards and points; and, if they both prove equal, the game commences again, and the deal goes on in rotation. When three persons play at this game, the two lowest add their points together, and subtract from the highest; but when their two numbers together either amount to or exceed the highest, then neither party scores.

2128. LAWS OF CASSINO.—The deal and partners are determined by cutting, as at whist, and the dealer gives four cards, by one at a time, to every player, and either regularly, as he deals, or by one, two, three, or four at a time, lays four more, face upwards, upon the board, and, after the first cards are played, four others are to be dealt to each person, until the pack be concluded; but it is only in the first deal that any cards are to be turned up.

The deal is not lost when a card is faced by the dealer, unless in the first round, before any of the four cards are turned up upon the table; but if a card happen to be faced in the pack, before any of the said four be turned up, then the deal must be begun again.

Any person playing with less than four cards must abide by the loss; and should a card be found under the table, the player whose number is deficient is to take the same.

Each person plays one card at a time, with which he may not only take at once every card of the same denomination upon the table, but likewise all that will combine therewith; as, for instance, a ten takes not only every ten, but also nine and ace, eight and deuce, seven and three, six and four, or two fives; and if he clear the board before the conclusion of the game, he is to score a point, and whenever any player cannot pair or combine, then he is to put down a card.

The number of tricks are not to be examined or counted before all the cards be played; nor may any trick but that

last won be looked at, as every mistake must be challenged immediately.

After all the pack be dealt out, the player who obtains the last trick sweeps all the cards then remaining unmatched upon the table.

2129. VINGT-UN.—The game of *Vingt-un*, or twenty-one, may be played by two or more people; and, as the deal is advantageous, and often continues long with the same person, it is usual to determine it at the commencement by turning up the first ace, or any other mode that may be agreed upon.

The cards must all be dealt out in succession, unless a natural *Vingt-un* occurs, and in the meantime the pone, or youngest hand, should collect those that have been played, and shuffle them together, ready for the dealer, against the period when he shall have distributed the whole pack. The dealer is first to give two cards, by one at a time, to each player, including himself; then to ask every person in rotation, beginning with the eldest hand on the left, whether he stands or chooses another card, which, if required, must be given from off the top of the pack, and afterwards another, or more, if desired, till the points of the additional card or cards, added to those dealt, exceed or make twenty-one exactly, or such a number less than twenty-one as may be judged proper to stand upon; but when the points exceed twenty-one, then the cards of that individual player are to be thrown up directly, and the stakes to be paid to the dealer, who also is, in turn, entitled to draw additional cards; and, on taking a *Vingt-un*, is to receive double stakes from all who stand the game, except such other players likewise having twenty-one, between whom it is thereby a drawn game; and when any adversary has a *Vingt-un*, and the dealer not, then the opponent so having twenty-one, wins double stakes from him. In other cases, except a natural *Vingt-un* hap-

pen, the dealer pays single stakes to all whose numbers under twenty-one are higher than his own, and receives from those who have lower numbers; but nothing is paid or received by such players as have similar numbers to the dealer; and when the dealer draws more than twenty-one, he is to pay to all who have not thrown up.

Twenty-one, whensoever dealt in the first instance, is styled a *Natural Vingt-un*, should be declared immediately, and entitles the possessor to the deal, besides double stakes from all the players, unless there shall be more than one natural Vingt-un; in which case the younger hand or hands, so having the same, are excused from paying to the eldest, who takes the deal of course.

*Observe:* An ace may be reckoned either as eleven or one; every court-card is counted as ten, and the rest of the pack according to their points.

The odds of this game merely depend upon the average quantity of cards likely to come under or exceed twenty-one: for example, if those in hand make fourteen exactly, it is seven to six that the one next drawn does not make the number of points above twenty-one, but if the points be fifteen, it is seven to six against that hand: yet it would not, therefore, always be prudent to stand at fifteen, for as the ace may be calculated both ways; it is rather above an even bet that the adversary's two first cards amount to more than fourteen. A natural Vingt-un may be expected once in seven coups, when two, and twice in seven, when four people play, and so on, according to the number of players.

**2130. QUADRILLE.**—The game of *Quadrille* is played by four persons: and the number of cards required are forty; the four tens, nines, and eights, being discarded from the pack. The deal is made by distributing the cards to each player, three at a time for two rounds, and four at a time for one round;

commencing with the right-hand player, who is eldest hand.

The trump is made by the person who plays, with or without calling, by naming spades, clubs, diamonds, or hearts, and the suit so named becomes trumps.

The two following tables will show the rank and order of the cards, when trumps, or when not so:—

**2131. RANK AND ORDER OF THE CARDS WHEN TRUMPS:—**

<i>Clubs and Spades.</i>		<i>Hearts and Diamonds.</i>	
Spadille, the ace of spades.		Spadille, the ace of spades.	
Manille, the deuce of spades or of clubs.		Manille, the seven of hearts or of diamonds.	
Basto, the ace of clubs.		Basto, the ace of clubs.	
		Punto, the ace of hearts or of diamonds.	
King.	Six.	King.	Three.
Queen.	Five.	Queen.	Four.
Knave.	Four.	Knave.	Five.
Seven.	Three.	Deuce.	Six.
11 in all.		12 in all.	

**2132. RANK AND ORDER OF THE CARDS WHEN NOT TRUMPS:—**

<i>Clubs and Spades.</i>		<i>Hearts and Diamonds.</i>	
King.	Five.	King.	Three.
Queen.	Four.	Queen.	Four.
Knave.	Three.	Knave.	Five.
Seven.	Deuce.	Ace.	Six.
Six.		Deuce.	Seven.
9 in all.		10 in all.	

From these tables it will be observed that spadille and basto are always trumps: and that the red suits have one trump more than the black, the former twelve, and the latter only eleven.

There is a trump between spadille and basto, which is called manille, and is in black the deuce, and in red the seven: they are the second cards when trumps, and the last in their respective suits when not trumps.—Example: the deuce of spades being second trump, when they are trumps, and the lowest

card when clubs, hearts, or diamonds are trumps, and so of the rest.

*Punto* is the ace of hearts or diamonds which are above the king, and the fourth trump, when either of those suits are trumps, but are below the knave, and ace of diamonds or hearts when they are not trumps. The two of hearts or diamonds is always superior to the three; the three to the four; the four to the five; and the five to the six; the six is only superior to the seven when it is not trumps, for when the seven is manille, it is the second trump.

There are three *matadores*, viz., *spadille*, *manille*, and *basto*: whose privilege is, when the player has no other trumps but them, and trumps are led, he is not obliged to play them, but may play what card he thinks proper, provided, however, that the trump led is of an inferior value; but, if *spadille* should be led, he that has *manille* or *basto* only is compelled to lead it, which is the case with *basto* in respect to *manille*, the superior *matadore* always forcing the inferior.

#### *Terms used in Quadrille.*

To *ask leave* is to ask leave to play with a partner, by calling a king.

*Basto* is the ace of clubs, and always the third best trump.

*Bast* is a penalty, incurred by not winning when you stand your game, or by renouncing; in which cases you pay as many counters as are down.

*Cheville* is being between the eldest hand and the dealer.

*Codille* is when those who defend the pool make more tricks than those who defend the game, which is called winning the *codille*.

*Consolation* is a claim to the game, always paid by those who lose, whether by *codille* or *demisee*.

*Devole* is when he who stands the game makes no trick.

*Double* is to play for double stakes, with regard to the game, the consolation, the *sans prendre*, the *matadores*, and the *devole*.

*Force*, the *ombre* is said to be forced

when a strong trump is played for the adversary to over-trump. He is, likewise, said to be forced when he asks leave, and one of the other players obliges him to play *sans prendre*; or pass, by offering to play *sans prendre*.

*Forced spadille* is, when all have passed, he who has *spadille* is obliged to play it.

*Forced sans prendre* is, when having asked leave, one of the players offers to play alone, in which case you are obliged to play alone or pass.

*Friend* is the player who has the king called.

*Impasse*. To make the *impasse* is when, being in *cheville*, the knave of a suit is played, of which the player has the king.

*Manille* is, in black, the deuce of spades or clubs; in red, the seven of hearts or diamonds, and is always the second best trump.

*Mark* means the fish put down by the dealer.

*Mille* is a mark of ivory which is sometimes used, and stands for ten fish.

*Matadores*, or *mat's*, are *spadille*, *manille*, and *basto*, which are always the three best trumps. False *matadores* are any sequence of trumps; following the *matadores* regularly.

*Ombre* is the name given to him who stands the game, by calling or playing *sans peller*, or *sans prendre*.

*Parry* is the duration of the game, according to the number of tours agreed to be played.

*Pass* is the term used when you have not either a hand to play alone, or with calling a king.

*Ponto* or *Punto*, is the ace of diamonds, when diamonds are trumps; or hearts, when they are trumps, and is then the fourth trump.

*Pool*. The pool consists of the fishes, which are staked for the deals, or the counters put down by the players, or the *basts* which go to the game. To defend the pool is to be against him who stands the game.

*Prise* is the number of fish or counters given to each player at the commencement of the game.

*R      * is the order to be observed at the game.

*Remise* is when they who stand the game do not make more tricks than they who defend the pool, and then they lose by remise.

*Renounce* is not to play in the suit led when you have it; likewise, when not having any of the suit led, you win with a card that is the only one you have of that suit in which you play.

*Reprise* is synonymous with party.

*Report* is synonymous with reprise and party.

*Roi Rendu* is the king surrendered when called and given to the ombre, for which he pays a fish; in which case, the person to whom the game is given up, must win the game alone.

*Spadille* is the ace of spades, which is always the best trump.

*Sans Appeller* is playing without calling a king.

*Sans Apprendre* is erroneously used for sans appeller, meaning the same.

*Tenace* is to wait with two trumps that must make when he who has two others is obliged to lead, such as the two black aces against manille or punto.

*Tours* are the counters, which they who win put down, to mark the number of coups played.

*Vole* is to get all the tricks, either with a friend or alone, sans prendre, or declared at the first of the deal.

2133. LAWS OF QUADRILLE.—1. The cards are to be dealt by fours and threes, and in no other manner. The dealer is at liberty to begin by four or three. If in dealing there is a faced card, there must be a new deal, unless it is the last card.

2. If there are too many or too few cards, it is also a new deal.

3. No penalty is inflicted for dealing wrong, but the dealer must deal again.

4. He who has asked leave is obliged to play.

5. No one should play out of his

turn: if, however, he does, he is not basted for it, but the card played may be called at any time in that deal, provided it does not cause a revoke; or either of the adversaries may demand the partner of him who played out of his turn, or his own partner, to play any suit he thinks fit.

6. No matadore can be forced but by a superior matt; but the superior forces the inferior, when led by the first player.

7. Whoever names any suit for trumps must abide by it, even though it should happen to be his worst suit.

8. If you play with eleven cards you are basted.

9. If you play sans prendre, or have matadores, you are to demand them before the next dealer has finished his deal, otherwise you lose the benefit.

10. If any one names his trump without asking leave, he must play alone, unless the youngest hand and the rest have passed.

11. If any person plays out of his turn, the card may be called at any time, or the adversary may call a suit.

12. If the person who won the sixth trick plays the seventh card, he must play the vole.

13. If you have four kings, you may call a queen to one of your kings, or call one of your kings; but you must not call the queen of trumps.

14. If a card is separated from the rest, and it is seen, it must be played, if the adverse party has seen it, unless the person who separated it plays sans prendre.

15. If the king called or his partner plays out of his turn, no vole can be played.

16. No one is to be basted for a renounce, unless the trick is turned and quitted; and if any person renounces and it is discovered, if the player should happen to be basted by such renounce, all the parties are to take up their cards and play them over again.

17. Forced spadille is not obliged to make three tricks.

18. The person who undertakes to play the vole has the preference of playing before him who offers to play sans prendre.

19. The player is entitled to know who is his king called, before he declares for the vole.

20. When six tricks are won, the person who won the sixth must say, "I play—or do not play—the vole;" or "I ask;" and no more.

21. He who has passed once has no right to play after, unless he has spadille; and he who asks must play, unless somebody else plays sans prendre.

22. If the players show their cards before they have won six tricks, they may be called.

23. Whoever has asked leave cannot play sans prendre, unless he is forced.

24. Any person may look at the tricks when he is to lead.

25. Whoever, playing for a vole, loses it, has a right to stakes, sans prendre, and matadores.

26. Forced spadille cannot play for the vole.

27. If any person discover his game he cannot play the vole.

28. No one is to declare how many trumps are out.

29. He who plays and does not win three tricks, is basted alone, unless forced spadille.

30. If there are two cards of a sort, it is a void deal, if discovered before the deal is played out.

2133.\* RULES FOR LEARNERS.—When you are the ombre, and your friend leads from a matt, play your best trump, and then lead the next best the first opportunity.

If you possess all the trumps continue to lead them, except you hold certain other winning cards.

If all the other matts are not revealed by the time you have six tricks, do not run a risk in playing for the vole.

When you are the friend called, and hold only a matt, lead it; but if it is guarded by a small trump, lead that.

But when the ombre is last player, lead the best trump you possess.

Punto in red, or king of trumps in black, are good cards to lead when you are best; and should either of them succeed, then play a small trump.

If the ombre leads to discover his friend, and you have king, queen, and knave, put on the knave.

Preserve the suit called, whether friend or foe.

When playing against a lone hand, never lead a king, unless you have the queen; nor change the suit: and prevent, if possible, the ombre from being last player.

You are to call your strongest suits, except you have a queen guarded; and if elder hand, you have a better chance than middle hand.

A good player may play a weaker game, either elder or younger, than middle hand.

2134. QUINZE.—This game is usually played by only two persons, and is much admired for its simplicity and fairness, as it depends entirely upon chance, is soon decided, and does not require that attention which most other games do. It is, therefore, particularly calculated for those who love to sport upon an equal chance.

Quinze is a French game, and is so called from fifteen being the game, which must be made as follows:—

1. The cards must be shuffled by the two players, and when they have cut for deal, which falls to the lot of him who cuts the lowest, the dealer has the liberty at this, as well as all other games, to shuffle them again.

2. When this is done, the adversary cuts them; after which, the dealer gives one card to his opponent, and one to himself.

3. Should the dealer's adversary not approve of his card, he is entitled to have as many cards given to him, one after the other, as will make fifteen, or come nearest to that number; which are usually given from the top of the

pack : for example—if he should have a deuce, and draw a five, which amounts to seven, he must continue going on, in expectation of coming nearer to fifteen. If he draw an eight, which will make just fifteen, he, as being eldest hand, is sure of winning the game. But if he overdraw himself, and make more than fifteen, he loses, unless the dealer should happen to do the same ; which circumstance constitutes a draw game ; and the stakes are consequently doubled. In this manner they persevere, until one of them has won the game, by standing and being nearest to fifteen.

4. At the end of each game the cards are packed and shuffled, and the players again cut for deal.

5. The advantage is invariably on the side of the elder hand.

2185. THE WEATHER AND THE BLOOD.—In dry sultry weather the heat ought to be counteracted by means of a cooling diet. To this purpose cucumbers, melons, and juicy fruits are subservient. We ought to give the preference to such alimentary substances as lead to contract the juices which are too much expanded by the heat, and the property is possessed by all acid food and drink. To this class belong all sorts of salad, lemons, oranges, pomegranates sliced and sprinkled with sugar, for the acid of this fruit is not so apt to derange the stomach as that of lemons : also cherries and strawberries, curds turned with lemon acid or cream of tartar : cream of tartar dissolved in water—lemonade and Rhenish or Moselle wine mixed with water.

2186. A LEMONADE, composed of two bottles of champagne, one bottle of seltzer water, three pomegranates, three lemons, and of sugar *quantum sufficit*, is a princely beverage in hot weather ; only care must be taken that the perspiration is not thereby too much encouraged.

2187. SUMMER CHAMPAGNE.—To four parts of seltzer water add one

of Moselle wine (or hock), and put a tea-spoonful of powdered sugar into a wine-glassful of this mixture ; an ebullition takes place and you have a sort of champagne which is more wholesome in hot weather than the genuine wine known by that name.

2188. OUR ATTENTION ought to be directed to the means of *thinning* the blood, when it has been deprived by too profuse transpiration in hot dry winds of its aqueous particles and rendered thick and viscid. Water would easily supply this want of fluidity if it were capable of mingling with the blood when in this state ; acid matter cannot be ultimately combined with the blood when the body is in this state. In order to find a menstruum by which water may be rendered capable of combining ultimately with the blood—of remaining long in combination with it—and of thinning it, we must mix it with a substance possessing the property of a soap, and consequently fit to dissolve viscous matters, and make them unite with water. The soap must contain but little salt, that it may not increase the thirst of the parched throat. It must not have a disagreeable taste, that we may be able to drink a considerable quantity of it : and it must be capable of recruiting the strength without overloading the stomach. Now all these qualities are to be found in the yolk of egg. No beverage therefore is more suitable (whilst it is very agreeable) for hot, dry weather than one composed of the yolk of egg beaten up with a little sugar (*quantum sufficit* for taste) and mixed with a quart of cool spring or filtered water, half a glass of Moselle or any other Rhenish wine and some lemon juice. The wine, however, may be omitted and lemon juice alone (and rather more) used. In like manner hartshorn shavings boiled in water may be substituted for the yolk of egg, equal quantities of beef tea and whey are good for delicate infants.

2189. SUBSTITUTE FOR THE

**FOREGOING.** — The yolk of eggs beaten up, lump sugar (*quantum sufficit*), Rhemish wine or not, citric acid, powdered, or tartaric acid (small quantity, exact quantity soon found); one or two drops of essence of lemon on a lump of sugar to make it mix readily with the water; one quart of water. This is really an excellent, agreeable, and, without the wine, an inexpensive beverage.

**2140. AGREEABLE EFFERVESCENT DRINK FOR HEART-BURN &c.**—Orange juice—(of one orange) water and lump sugar to flavour, and in proportion to acidity of orange bicarbonate of soda about half a teaspoonful. Mix orange juice, water and sugar together in a tumbler, then put in the soda, stir, and the effervescence ensues.

**2141. DEAFNESS.** — Take three drops of a sheep's gall, warm, and drop it into the ear on going to bed. The ear must be thoroughly syringed with warm soap and water in the morning. The gall must be applied for three successive nights. It is only efficacious when the deafness is produced by cold. The most convenient way of warming the gall is by holding it in a silver spoon over the flame of a candle. The above remedy has been frequently tried with perfect success.

**2142 SWEEPING CARPETS.**—Persons who are accustomed to use tea leaves for sweeping their carpets, and find that they leave stains, will do well to employ fresh cut grass instead. It is better than tea leaves for preventing dust, and gives the carpets a very bright fresh look.

**2143. THE CRIMEAN NIGHT-CAP,** made in a moment, costing nothing, and admirable for railway and other travellers.—Take your pocket-handkerchief, and laying it out the full square, double down *one-third* over the other part. Then raise the whole and turn it over, so that the third folded down shall now be underneath. Then take hold of one of the folded corners, and draw its point towards the centre ;

then do the same with the other, as in making a cooked-hat, or a boat, of paper. Then take hold of the two remaining corners, and twisting the *horns* of the handkerchief, continue to roll it until it meets the doubled corners brought to the centre, and catches them up a little. Lift the whole and you will see the form of a cap, which, when applied to the head, will cover the head and ears, and, being tied under the chin, will not come off. Very little practice will enable you to regulate the size of the folds, so as to suit the head.

**2144. MOCK GOOSE** (being a leg of pork skinned, roasted, and stuffed goose fashion).—Parboil the leg; take off the skin, and then put it down to roast; baste it with butter, and make a *savoury powder* of finely minced or dried and powdered sage, ground black pepper, salt, and some bread-crumbs, rubbed together through a colander: you may add to this a little very finely minced onion; sprinkle it with this when it is almost roasted; put a half pint of made gravy into the dish, and goose stuffing, under the knuckle skin; or garnish the dish with balls of it fried or boiled.

**2145. TINCTURE OF LEMON-PEEL.**—A very easy and economical way of obtaining and preserving the flavour of lemon-peel, is to fill a wide-mouthed pint bottle half full of brandy, or proof spirit; and when you use a lemon, pare the rind off very thin, and put it into the brandy, &c.:—in a fortnight it will impregnate the spirit with the flavour very strongly.

**2146. RELISHING RASHERS OF BACON.**—If you have any *cold bacon*, you may make a very nice dish of it by cutting it into slices about a quarter of an inch thick; grate some crust of bread, as directed for ham, and powder them well with it on both sides; lay the rashers in a cheese-toaster,—they will be browned on one side in about three minutes:—turn them and do the other. These are a delicious accompaniment to poached or fried eggs:—

the bacon having been boiled first, is tender and mellow.—They are an excellent garnish round veal cutlets, or sweet-breads, or calf's head hash, or green pease, or beans, &c.

**2147. RUMP-STEAK PIE.**—Cut three pounds of rump-steak (that has been kept till tender) into pieces half as big as your hand, trim off all the skin, sinews, and every part which has not indisputable pretensions to be eaten, and beat them with a chopper. Chop very fine half a dozen eschalots, and add them to half an ounce of pepper and salt mixed, strew some of the mixture at the bottom of the dish, then a layer of steak, then some more of the mixture, and so on till the dish is full; add half a gill of mushroom catchup, and the same quantity of gravy, or red wine; cover it as in the preceding receipt, and bake it two hours. Large oysters, parboiled, bearded, and laid alternately with the steaks,—their liquor reduced and substituted instead of the catchup and wine, will be a variety.

**2148. RAISED PIES.**—Put two pounds and a half of flour on the paste-board,—and put on the fire, in a saucepan, three quarters of a pint of water, and half a pound of good lard;—when the water boils, make a hole in the middle of the flour, pour in the water and lard by degrees, gently mixing the flour with it with a spoon, and when it is well mixed, then knead it with your hands till it becomes stiff; dredge a little flour to prevent its sticking to the board, or you cannot make it look smooth:—do not roll it with the rolling-pin,—but roll it with your hands, about the thickness of a quart-pot; cut it into six pieces, leaving a little for the covers,—put one hand in the middle, and keep the other close on the outside till you have worked it either in an oval or a round shape:—have your meat ready cut, and seasoned with pepper and salt:—if pork, cut it in small slices: the griskin is the best for pasties:—if you use mutton, cut it

in very neat cutlets, and put them in the pies as you make them; roll out the covers with the rolling-pin just the size of the pie, wet it round the edge, put it on the pie, and press it together with your thumb and finger, and then cut it all round with a pair of scissors quite even, and pinch them inside and out, and bake them an hour and a half.

**2149. RELISH FOR CHOPS, &c.**—Pound fine an ounce of black pepper, and half an ounce of allspice, with an ounce of salt, and half an ounce of scraped horseradish, and the same of eschalots, peeled and quartered; put these ingredients into a pint of mushroom ketchup, or walnut pickle, and let them steep for a fortnight, and then strain it.

*Obs.*—A tea-spoonful or two of this is generally an acceptable addition, mixed with the gravy usually sent up for chops and steaks; or added to thick melted butter.

**2150. ESSENCE OF MUSHROOM.**—This delicate relish is made by sprinkling a little salt over either flap or button mushrooms;—three hours after, mash them,—next day strain off the liquor that will flow from them, put it into a stew-pan, and boil it till it is reduced to half. It will not keep long, but is preferable to any of the catchups, which, in order to preserve them, must have spice, &c., which overpowers the flavour of the mushrooms. An artificial mushroom bed will supply this all the year round.

**2151. ARTIFICIAL MUSHROOM BEDS.**—Mushrooms may be grown in pots, boxes, or hampers. Each box may be three feet long, one and a half broad, and seven inches in depth. Let each box be half filled with horse-dung from the stables (the fresher the better, and if wet, to be dried for three or four days before it be put into the boxes); the dung is to be well beat down in the box. After the second or third day, if any heat has arisen amongst the dung, break each spawn brick into three parts

as equally as possible, then lay the pieces about four inches apart upon the surface of the dung in the box; here they are to lie for six days, when it will probably be found that the side of the spawn next to the dung has begun to run in the dung below; then add one and a half inch more of fresh dung on the top of the spawn in the box, and beat it down as formerly. In the course of a fortnight, when you find that the spawn has run through the dung, the box will be ready to receive the mould on the top; this mould must be two and a half inches deep, well beat down, and the surface made quite even. In the space of five or six weeks the mushrooms will begin to come up; if then the mould seems dry, give a gentle watering with lukewarm water. The box will continue to produce from six weeks to two months, if duly attended to by giving a little water when dry, for they need neither *light* nor *free air*. If cut as button mushrooms each box will yield from twenty-four to forty-eight pints, according to the season and other circumstances. They may be kept in dry dark cellars, or any other places where the frost will not reach them. And by preparing, in succession of boxes, mushrooms may be had all the year through. They may be grown without the dung, and be of a finer flavour. Take a little straw, and lay it carefully in the bottom of the mushroom-box, about an inch thick, or rather more. Then take some of the spawn bricks and break them down—each brick into about ten pieces, and lay the fragments on the straw, as close to each other as they will lie. Cover them up with mould three and a half inches deep, and well pressed down. When the surface appears dry, give a little tepid water, as directed for the last way of raising them; but this method needs about double the quantity of water that the former does, owing to having no moisture in the bottom, while the other has the dung. The mushrooms will

begin to start in a month or five weeks, sometimes sooner, sometimes later, according to the heat of the place where the boxes are situated. The spawn bricks may be obtained from seedsmen, or be collected from meadows.

2152. GOOSE OR DUCK STUFFING.—Chop very fine about two ounces of onion, of *green* sage leaves about an ounce (both unboiled), four ounces of bread-crumbs, a bit of butter about as big as a walnut, &c., the yolk and white of an egg, and a little pepper and salt; some add to this a minced apple.

2153. ROAST GOOSE.—When a goose is well picked, singed, and cleaned make the stuffing with about two ounces of onion (if you think the flavour of raw onions too strong, cut them in slices, and lay them in cold water for a couple of hours, or add as much apple or potato as you have of onion,) and half as much green sage, chop them very fine, adding four ounces, *i. e.*, about a large breakfast cupful of stale bread crumbs, a bit of butter about as big as a walnut, and a very little pepper and salt (to this some cooks add half the liver, parboiling it first), the yolk of an egg or two, and incorporating the whole well together, stuff the goose; do not quite fill it, but leave a little room for the stuffing to swell. Spit it, tie it on the spit at both ends, to prevent it swinging round, and to prevent the stuffing from coming out. From an hour and a half to an hour and three quarters will roast a fine full-grown goose. Send up gravy and apple-sauce with it.

2154. SAGE AND ONION, OR GOOSE STUFFING SAUCE.—Chop very fine an ounce of onion and half an ounce of green sage leaves, put them into a stew-pan with four spoonfuls of water, simmer gently for ten minutes, then put in a tea-spoonful of pepper and salt, and one ounce of fine bread crumbs; mix well together;—then pour to it a quarter of a pint of broth, or gravy, or melted butter, stir well together, and simmer it a few minutes

longer. This is a very relishing sauce for roast pork, poultry, geese, or ducks; or green peas.

**2155. APPLE SAUCE.**—Pare and core three good-sized baking apples, put them into a well-tinned pint saucepan, with two table-spoonsful of cold water; cover the saucepan close, and set it on a trivet over a slow fire a couple of hours before dinner,—some apples will take a long time stewing,—others will be ready in a quarter of an hour: when the apples are done enough pour off the water, let them stand a few minutes to get dry; then beat them up with a fork, with a bit of butter about as big as a nutmeg, and a tea-spoonful of powdered sugar. Some add lemon-peel, grated, or minced fine, —or boil a bit with the apples. Some are fond of apple sauce with cold pork.

**2156. BEEF GRAVY SAUCE.**—(*Or Brown Sauce for Ragout, Game, Poultry, Fish, &c.*)—If you want gravy, lardish a thick and well-tinned stewpan with a thin slice of fat ham or bacon, or an ounce of butter, and a middling sized onion;—on this lay a pound of nice juicy gravy beef (as the object in making gravy is to extract the nutritious succulence of the meat, it must be beaten to comminute the containing vessels, and scored to augment the surface to the action of the water), cover the stew-pan, set it on a slow fire; when the meat begins to brown, turn it about, and let it get slightly browned (but *take care it is not at all burnt*): then pour in a pint and a half of boiling water, set the pan on the fire;—when it boils,—carefully catch the scum,—and then put in a crust of bread toasted brown (don't burn it)—a sprig of winter savoury, or lemon thyme and parsley—a roll of thin-cut lemon-peel, a dozen berries of allspice, and a dozen of black pepper, cover the stew-pan close, let it *stew very gently* for about two hours, then strain it through a sieve into a basin. If you wish to thicken it, set a clean stew-pan over a slow fire, with about an ounce of butter

in it; when it is melted, dredge to it (by degrees) as much flour as will dry it up, stirring them well together; when thoroughly mixed, pour in a little of the gravy,—stir it well together, and add the remainder by degrees; set it over the fire, let it simmer gently for fifteen or twenty minutes longer, and skim off the fat, &c., as it rises; when it is about as thick as cream, squeeze it through a tamis or fine sieve,—and you will have a fine rich brown sauce, at a very moderate expense, and without much trouble. *Obs.*—If you wish to make it still more relishing,—for *Poultry*, you may pound the liver with a bit of butter, rub it through a sieve, and stir it into the sauce when you put in the thickening.

**2157. BEEF ALAMODE AND VEAL DITTO.**—Take about eleven pounds of the mouse buttock,—or clod of beef,—or blade-bone,—or the sticking piece, or the like weight of the breast of veal;—cut it into pieces of three or four ounces each; put three or four ounces of beef dripping, and mince a couple of large onions, and put them into a large deep stew-pan: as soon as it is quite hot, flour the meat, put it into the stew-pan, keep stirring it with a wooden spoon; when it has been on about ten minutes, dredge it with flour, and keep doing so till you have stirred in as much as you think will thicken it; then cover it with boiling water (it will take about a gallon), adding it by degrees, and stirring it together; skim it when it boils, and then put in one drachm of ground black pepper, two of allspice, and two bay-leaves; set the pan by the side of the fire, or at a distance over it, and let it *stew very slowly* for about three hours; when you find the meat sufficiently tender, put it into a tureen, and it is ready for table.

**2158. WALNUT CATCHUP.**—Take six half-sieves of green walnut-shells, put them into a tub, mix them up well with common salt, from two to three pounds, let them stand for

six days, frequently beating and mashing them: by this time the shells become soft and pulpy, then by banking it up on one side of the tub, and at the same time by raising the tub on that side, the liquor will drain clear off to the other; then take that liquor out: the mashing and banking-up may be repeated as often as liquor is found. The quantity will be about six quarts. When done, let it be simmered in an iron boiler as long as any scum arises; then bruise a quarter of a pound of ginger, a quarter of a pound of allspice, and two ounces of long pepper, two ounces of cloves, with the above ingredients, let it slowly boil for half an hour; when bottled, let an equal quantity of the spice go into each bottle; when corked, let the bottles be filled quite up: cork them tight, seal them over, and put them into a cool and dry place for one year before they are used.

2159: BAKING.—Bread made in accordance with the directions (2183) may be baked in the "revolving ovens," sold by Mr. Ball, of 3, Hyde-street, Oxford-street, London, and which may probably be obtained through iron-mongers and hardware men in the country, by order. These ovens, suspended in front of any common fire by means of a bottle-jack or a common worsted string, will bake bread, cakes, pies, &c., in a much more equal and perfect manner than either a side oven or an American oven, without depriving the room of the heat and comfort of the fire. We have tested these facts, and can pronounce the revolving oven to be a household treasure. By an ordinary fire, in any room in the house, it will bake a four pound loaf in an hour and twenty minutes. It also bakes pastry remarkably well, and all the care it requires is merely to give it a look now and then to see that it keeps turning. In one family the saving has been found to be 8s. 6d. per week—a large proportion of the earnings of many poor families. The cost of the oven is

8s. 6d. We have no doubt that in many families the saving through grinding their own wheat and baking their own bread, by the means we have pointed out, will be as much as 10s. per week, and in large establishments, schools, &c., considerably more. (See 2183.)

2160. YEAST.—Boil, say on Monday morning, 2oz., of the best hops in four quarts of water for half-an-hour; strain it, and let the liquor cool down to new milk warmth; then put in a small handful of salt and half a pound of sugar; beat up one pound of the best flour with some of the liquor, and then mix well all together. On Wednesday add three pounds of potatoes boiled and then mashed, to stand till Thursday; then strain it, and put it into bottles, and it is ready for use. *It must be stirred frequently while it is making, and kept near the fire.* Before using, shake the bottle up well. It will keep in a cool place for two months, and is best at the latter part of the time. The beauty of this yeast is that it ferments spontaneously, not requiring the aid of other yeast; and if care be taken to let it ferment well in the earthen bowl in which it is made, you may cork it up tight when bottled. The quantity above given will fill four seltzer-water bottles. The writer of the above receipt has used this yeast for many months, and never had lighter bread than it affords, and never knew it to fail.

2161. FORCEMEAT BALLS (for turtle, mock turtle, or made dishes).—Pound some veal in a marble mortar, rub it through a sieve with as much of the udder as you have veal, or about a third of the quantity of butter:—put some bread-crumbs into a stew-pan, moisten them with milk, add a little chopped parsley and eschalot, rub them well together in a mortar, till they form a smooth paste; put it through a sieve, and when cold, pound, and mix all together, with the yolks of three eggs boiled hard; season it with salt, pepper, and curry powder, or cayenne, add to it the yolks of two raw eggs, rub it well

together, and make small balls; ten minutes before your soup is ready, put them in.

**2162. SYRUP OF ORANGE OR LEMON-PEEL.**—Of fresh outer rind of Seville orange or lemon-peel, three ounces, apothecaries' weight; boiling water, a pint and a-half; infuse them for a night in a close vessel; then strain the liquor; let it stand to settle; and having poured it off clear from the sediment, dissolve in it two pounds of double-refined loaf sugar, and make it into a syrup with a gentle heat.

**2163. HORSERADISH VINEGAR.**—Pour a quart of best vinegar on three ounces of scraped horseradish, an ounce of minced eschalot, and one drachm of cayenne; let it stand a week, and you will have an excellent relish for cold beef, salads, &c., costing scarcely anything. Horseradish is in highest perfection about November.

**2164. CRESS VINEGAR.**—Dry and pound half an ounce of *cress-seed* (such as is sown in the garden with mustard), pour upon it a quart of the best vinegar, let it steep ten days, shaking it up every day. This is very strongly flavoured with *cress*,—and for salads, and cold meats, &c., it is a great favourite with many;—the quart of sauce cost only a halfpenny more than the vinegar. Celery vinegar may be made in the same manner.

**2165. CAYENNE PEPPER.**—Dr. Kitchener says (in his excellent book, *The Cook's Oracle*):—We advise those who are fond of cayenne not to think it too much trouble to make it of English chillies,—there is no other way of being sure it is genuine,—and they will obtain a pepper of much finer flavour, without half the heat of the foreign. A hundred large chillies, costing only two shillings, will produce you about two ounces of cayenne,—so it is as cheap as the commonest cayenne. Four hundred chillies, when the stems were taken off, weighed half a pound; and when dried produced a quarter of a pound of cayenne pepper. The follow-

ing is the way to make it:—Take away the stalks, and put the pods into a colander; set it before the fire; they will take full twelve hours to dry; then put them into a mortar, with one-fourth their weight of salt, and pound them; and rub them till they are as *fine as possible*, and put them into a well-stopped bottle.

**2166. A NICE WAY** of serving up a fowl that has been dressed. Beat the white of two eggs to a thick froth; add a small bit of butter, or some salad oil, flour, a little lukewarm water, and two tablespoonfuls of beer, beaten altogether till it is of the consistency of very thick cream. Cut up the fowl into small pieces, strew over it some chopped parsley and shallot, pepper, salt, and a little vinegar, and let it lie till dinner time; dip the fowl in the batter, and fry it in boiling lard, of a nice light brown. Veal that has been cooked may be dressed in the same way. The above is a genuine family receipt, long practised by a French servant.

**2167. CURRY POWDER.** (a genuine Indian receipt.)—Turmeric, coriander, black pepper, four ounces, each: Fennigreek, three ounces; ginger, two ounces; cummin seed, ground rice, one ounce each; cayenne pepper, cardamums, half an ounce each.

**2168. ANOTHER CURRY POWDER.**—Coriander, twelve ounces; black pepper six ounces; turmeric, four ounces and three quarters; cummin seed, three ounces; cayenne one ounce and a-half; ground rice, one ounce; cardamums, half an ounce; cloves, quarter of an ounce. I have found it best to have the above receipts prepared at my chemist's.

**2169. BOILED RICE FOR CURRY.** Put the rice down in cold water, and let it come to a boil for a minute or so; strain it quite dry, and lay it on the hob in a stewpan without a cover to let the steam evaporate, then shake it into the dish while very hot. A squeeze of lemon juice after it, boils will make

it separate better. The three last receipts were given me by a lady who had passed the greater part of her life in India, and who had them from native cooks.

2170. INDIAN SYRUP.—(*A delicious summer drink.*) Five pounds of lump sugar, two ounces of citric acid, a gallon of boiling water: when cold add half a drachm of essence of lemon and half a drachm of spirits of wine, stir it well and bottle it. About two table-spoonfuls to a glass of cold water.

2171. CHUTNEY.—One pound of salt, one pound of mustard seed, one pound of stoned raisins, one pound of brown sugar, twelve ounces of garlic, six ounces of cayenne pepper, two quarts of unripe gooseberries, two quarts of best vinegar. The mustard seed, gently dried and bruised; the sugar made into a syrup with a pint of the vinegar; the gooseberries dried and boiled in a quart of the vinegar; the garlic to be well bruised in a mortar. When cold, gradually mix the whole in a large mortar, and with the remaining vinegar thoroughly amalgamate them. To be tied down close, the longer kept the better. This is excellent.

2172. CURING OF HAMS AND BACON.—It is simply to use the same quantity of common soda as saltpetre—one ounce and a half of each to the fourteen pounds of ham or bacon, using the usual quantity of salt. The soda prevents that hardness in the lean of the bacon which is so often found, and keeps it quite mellow all through, besides being a preventive of rancor. This receipt has been very extensively tried amongst my acquaintance for the last fifteen years, and invariably approved.

2173. COL. BIRCH'S RECEIPT for rheumatic gout or acute rheumatism, commonly called the CHELSEA PENSIONER.—Half an ounce of nitre (saltpetre), half an ounce of sulphur, half an ounce of flower of mustard, half an ounce of Turkey rhubarb, quarter of an ounce of

powdered gum guaiacum. Mix. A teaspoonful to be taken every other night for three nights, and omit three nights, in a wine-glassful of cold water,—water which has been well boiled.

2174. OINTMENT FOR THE PILES or Hæmorrhoids.—Take of hogs' lard, four ounces, camphor two drachms, powdered galls, one ounce, laudanum, half an ounce. Mix; make an ointment to be applied every night at bed-time.

2175. OINTMENT FOR SORE NIPPLES.—Take of tincture of tolu two drachms, spermaceti ointment half an ounce; powdered gum two drachms. Mix. Make an ointment. The white of an egg mixed with brandy is the best application for sore nipples; the person should at the same time use a nipple shield.

2176. OINTMENT FOR BROKEN CHILBLAINS or CHAPPED HANDS, &c.,—Sweet oil, one pint; Venice turpentine, three ounces; hogs' lard, half a pound; bees' wax, three ounces. Put all into a pipkin over a slow fire, and stir it with a wooden spoon till the bees' wax is all melted, and the ingredients simmer. It is fit for use as soon as cold, but the longer it is kept the better it will be. It must be spread very thin on soft rag, or (for chaps or cracks) rubbed on the hands when you go to bed. A visitor to a large poor district has never known this to fail.

2177. FOR A COUGH.—Syrup of poppies, oxymel of squills, simple oxymel, in equal parts, mixed, and a teaspoonful taken when the cough is troublesome. It is best to have it made up by a chemist. The cost is trifling.

2178. BUGS.—Spirits of naphtha rubbed with a small painter's brush into every part of a bedstead is a certain way of getting rid of bugs. The mattress and binding of the bed should be examined, and the same process attended to, as they generally harbour more in these parts than in the bedstead. Three pennyworth of naphtha is sufficient for one bed.

2179. WASHING.—(*Supremacy of soap-suds over lime*—(See 272, 342, 1298.) To save your linen and your labour. Pour on half a pound of soda two quarts of boiling water in an earthenware pan; take half a pound of soap, shred fine; put it into a saucepan with two quarts of cold water; stand it on a fire till it boils; and when perfectly dissolved and boiling, add it to the former. Mix it well, and let it stand till cold, when it has the appearance of a strong jelly. Let your linen be soaked in water, the seams and any other dirty part rubbed in the usual way, and remain till the following morning. Get your copper ready and add to the water about a pint basin full; when lukewarm put in your linen and allow it to boil twenty minutes. Rinse it in the usual way, and that is all which is necessary to get it clean and to keep it in good colour. The above receipt is invaluable to house-keepers. If you have not tried it, do so without delay.

2180. LEECH BAROMETER.—Take an eight-ounce phial, and put in it three gills of water, and place in it a healthy leech, changing the water in summer once a week, and in winter once in a fortnight, and it will most accurately prognosticate the weather. If the weather is to be fine, the leech lies motionless at the bottom of the glass, and coiled together in a spiral form; if rain may be expected, it will creep up to the top of its lodgings and remain there till the weather is settled; if we are to have wind, it will move through its habitation with amazing swiftness, and seldom goes to rest till it begins to blow hard; if a remarkable storm of thunder and rain is to succeed, it will lodge for some days before almost continually out of the water, and discover great uneasiness in violent throes and convulsive-like motions; in frost as in clear summer-like weather it lies constantly at the bottom; and in snow as in rainy weather it pitches its dwelling in the very mouth of the

phial. The top should be covered over with a piece of muslin.

2181. LIFE BELTS.—An excellent and cheap life belt, for persons proceeding to sea, bathing in dangerous places, or learning to swim, may be thus made:—Take a yard and three quarters of strong jean, double, and divide it into nine compartments. Let there be a space of two inches after each third compartment. Fill the compartments with very fine cuttings of cork, which may be made by cutting up old corks, or (still better) purchased at the cork-cutters. Workilot holes at the bottom of each compartment to let the water drain out. Attach a neck-band and waist strids of stout boot-wob, and sew them on strongly.

2182. ANOTHER.—Cut open an old boa, or victorine, and line it with fine cork-cuttings instead of wool. For ladies going to sea these are excellent, as they may be worn in stormy weather, without giving appearance of alarm in danger. They may be fastened to the body by ribands or tapes, of the colour of the fur. Gentlemen's waistcoats may be lined the same way.

2183. PURE AND CHEAP BREAD.—Our informant states that for more than twelve months he has ground his own flour by a small hand-mill, which produces 17lb. of good meal bread for 20lb. of wheat (quite good enough for any one to eat), and that since himself and family have used this bread they have never had occasion for medical advice. They also use the same meal for puddings, &c. The price of a mill is £4. 10s. There are mills which grind and dress the wheat at one operation. To grind 20lbs. of wheat would take a boy, or a servant, about forty or fifty minutes. Such mills can be obtained at the agricultural machinery department of the Crystal Palace, or at 266, High Holborn. The saving in the cost of bread amounts to nearly one-third, which would soon cover the cost of the mill, and effect a most important sav-

ing, besides promoting health, by avoiding the evil effects of adulterated flour. (Sec 113, 461, 2077, and 2159).

2184. PEASE POWDER.—Pound in a marble mortar half an ounce each of dried mint and sage, a drachm of celery seed, and a quarter of a drachm of cayenne papper; rub them together through a fine sieve. This gives a very savoury relish to pease soup and to gruel, which, by its help, if the eater of it has not the most lively imagination, he may fancy he is sipping good pease soup. A drachm of allspice, or black pepper, may be pounded with the above as an addition, or instead of the cayenne.

2185. HORSE RADISH POWDER.—The time to make this is during November and December; slice it the thickness of a shilling, and lay it to dry very gradually in a Dutch oven (a strong heat soon evaporates its flavour); when dry enough, pound it and bottle it.

2186. DOMESTIC SURGERY. — This will comprise such hints and advice as will enable any one to act on an emergency, or in ordinary trivial accidents requiring simple treatment; and also to distinguish between serious and simple accidents, and the best means to adopt in all cases that are likely to fall under a person's notice. These hints will be of the utmost value to the heads of families, to emigrants, and to persons who are frequently called upon to attend upon the sick. We strongly recommend the Parent, Emigrant, or Nurse, to read over these directions occasionally, to regard it as a duty to do so at least three or four times a year, so as to be prepared for emergencies whenever they may arise. When accidents occur, people are too excited to acquire immediately a knowledge of what they should do; and many lives have been lost for want of this knowledge. Study, therefore, at moderate intervals the *Domestic Surgery, Treatment of Poisons, Rules for the Prevention of Accidents, How to Escape from Fires; the Domestic Pharma-*

*copæia, &c.*, which will be found in various pages of *Enquire Within*. And let it be impressed upon your mind that THE INDEX will enable you to refer to *anything* you may require in a moment. Don't trouble to hunt through the pages; but when you wish to ENQUIRE WITHIN, remember that the INDEX is the knocker, by which the door of knowledge may be opened. Such things as may require further elucidation will be treated of in *The Monthly Interview*.

2187.—1. DRESSINGS.—*Dressings* are substances usually applied to parts for the purpose of soothing, promoting their reunion when divided, protecting them from external injuries, as a means of applying various medicines, to absorb discharges, protect the surrounding parts and securing cleanliness.

2188. Certain instruments are required for the application of dressings in domestic surgery, viz.—Scissors, a pair of tweezers, or simple forceps, a knife, needles and thread, a razor, a lancet, a piece of lunar caustic in a quill, and a sponge.

2189. The materials required for dressings consist of lint, scraped linen, carded cotton, tow, ointment spread on calico, adhesive plaster, compresses, pads, poultices, old rags of linen or calico, and water.

2190. The following rules should be attended to in applying dressings:—1. Always prepare the new dressings before removing the old one. 2. Always have hot and cold water at hand, and a vessel to place the foul dressings in. 3. Have one or more persons at hand ready to assist, and tell each person what they are to do before you commence, it prevents confusion; thus one is to wash out and hand the sponges, another to heat the adhesive plaster, or hand the bandages and dressings, and, if requisite, a third to support the limb, &c. 4. Always stand on the outside of a limb to dress it. 5. Place the patient in as easy a position as possible, so as not to fatigue him.

6. Arrange the bed *after* changing the dressings, but in some cases you will have to do so *before* the patient is placed on it. 7. Never be in a hurry when applying dressings, do it quietly. 8. When a patient requires moving from one bed to another, the best way is for one person to stand on each *side* of the patient, and each to place an arm behind his back, while he passes his arms over their necks, then let their other arms be passed under his thighs, and by holding each others' hands, the patient can be raised with ease, and removed to another bed. If the leg is injured a third person should steady it, and if the arm, the same precaution should be adopted. Sometimes a stout sheet is passed under the patient, and by several people holding the sides, the patient is lifted without any fatigue or much disturbance.

2191. *Lint* may be made in a hurry, by nailing the corners of a piece of old linen to a board, and scraping its surface with a knife. It is used either alone or spread with ointment. Scraped lint is the fine filaments from ordinary lint, and is used to stimulate ulcers and absorb discharges; it is what the French call *Charpie*.

2192. *Scraped Lint* is made into various shapes, for particular purposes. For example, when it is screwed up into a conical or wedge-like shape, it is called a *tent*, and is used to dilate fistulous openings, so as to allow the matter to escape freely, to plug wounds, so as to promote the formation of a clot of blood, and thus arrest bleeding. When it is rolled into little balls they are called *boulettes*, and are used for absorbing matter in cavities, or blood in wounds. Another useful form is made by rolling a mass of scraped lint into a long roll, and then tying it in the middle with a piece of thread; the middle is then doubled and pushed into a deep-seated wound so as to press upon the bleeding vessel, while the ends remain loose and assist in forming a clot, or it is used in deep-seated

ulcers to absorb the matter and keep the edges apart. This form is called the *bourdonnet*. Another form is called the *pelote*, which is merely a ball of scraped lint tied up in a piece of linen rag, commonly called a *dabber*. This is used in the treatment of protrusion of the navel in children.

2193. *Carded Cotton* is used as a dressing for superficial burns, and care should be taken to free it from specks, as flies are apt to lay their eggs there, and generate maggots.

2194. *Tow* is chiefly employed as a padding for splints, as compresses, and also as an outer dressing where there is much discharge from a surface.

2195. *Ointments* are spread on calicoes, lint, or even thin layers of tow by means of a knife; they should not be spread too thick.

2196. *Adhesive Plaster* is cut into strips, ranging in width according to the nature of the wound, &c., but the usual width is about three-quarters of an inch. Isinglass plaster is not so irritating as diachylon, and is more easily removed.

2197. *Compresses* are made of pieces of linen, calico, lint, or tow, doubled or cut into various shapes. They are used to confine dressings in their places, and to apply an equal pressure on parts. They should be free from darts, horns, and knots. Ordinary compresses are square, oblong, and triangular. The *pierced compress*, is made by folding up a square piece of linen five or six times on itself, and then nicking the surface with scissors, so as to cut out small pieces. It is then opened out, and spread with ointment. It is applied to discharging surfaces, for the purpose of allowing the matter to pass freely through the holes, and is frequently covered with a thin layer of tow. Compresses are also made in the shape of a Maltese cross, and half a cross, sometimes split singly, and at other times doubly; or they are graduated by placing square pieces of folded cloth on one another, so arranged that they de-

crease in size each time. They are used for keeping up pressure upon certain parts.

2198. *Pads* are made by sewing two inside pieces of linen, or folding linen and sewing the pieces together. They are used to keep off pressure from parts, such as that caused by splints in fractures.

2199. *Poultices* are usually made of linseed-meal, oatmeal, or bread, either combined with water and other fluids; sometimes they are made of carrots, charcoal, potatoes, yeast, and linseed-meal, mustard, &c., but the best and most economical kind of poultice is a fabric made of sponge and wool felted together, and backed by India-rubber. It is called "Markwick's Patent Spongipiline." It gained a prize medal at the Great Exhibition. The method of using this poultice is as follows:—"A piece of the material of the required form and size is cut off, and the edges are pared or bevelled off with a pair of scissors, so that the caoutchouc may come in contact with the surrounding skin in order to prevent evaporation of the fluid used; for, as it only forms the vehicle, we can employ the various poultices generally used with much less expenditure of time and money, and increased cleanliness. For example,—a *vinegar* poultice is made by moistening the fabric with distilled vinegar; an *alum* poultice, by using a strong solution of alum; a *charcoal* poultice, by sprinkling powdered charcoal on the moistened surface of the material; a *yeast* poultice, by using warmed yeast, and moistening the fabric with hot water, which is to be well squeezed out previous to the absorption of the yeast; a *beer* poultice, by employing warm porter-dregs or strong beer as the fluid; and a *carrot* poultice, by using the expressed and evaporated liquor of boiled carrots. The material costs about one-farthing a square inch, and may be obtained of the chemist. As a fomentation it is most invaluable, and by moistening the material with compound camphor liniment or hartshorn, it acts the same as

a mustard poultice. Full directions will, no doubt, be supplied to those who purchase the material, if inquired for.

2200. *BANDAGES*.—Bandages are strips of calico, linen, flannel, muslin, elastic webbing, bunting, or some other substance of various lengths, such as three, four, eight, ten, or twelve yards, and one, one and-a-half, two, two-and-a-half, three, four, or six inches wide, free from hems or darts; soft and unglazed. They are better after they have been washed. Their uses are to retain dressings, apparatus, or parts of the body in their proper positions, support the soft parts, and maintain equal pressure.

2201. Bandages are simple and compound; the former are simple slips rolled up tightly like a roll of ribbon. There is also another simple kind which is rolled from both ends,—this is called a double-headed bandage. The compound bandages are formed of many pieces.

2202. Bandages for the head should be two inches wide and five yards long; for the neck two inches wide and three yards long; for the arm, two inches wide and seven yards long; for the leg, two inches and-a-half wide and seven yards long; for the thigh, three inches wide and eight yards long; and for the body, four or six inches wide and ten or twelve yards long.

2203. To apply a single-headed bandage, lay the *outside of the end* next to the part to be bandaged, and to hold the roll between the little, ring, and middle fingers, and the palm of the left hand, using the thumb and forefinger of the same hand to guide it, and the right hand to keep it firm, and pass the bandage partly round the leg towards the left hand. It is sometimes necessary to reverse this order, and therefore it is well to be able to use both hands. Particular parts require a different method of applying bandages, and therefore we shall describe the most useful separately, and there are different ways of putting on the same bandage, which consist in the manner the folds

or turns are made. For example, the *circular* bandage is formed by horizontal turns, each of which overlaps the one made before it; the *spiral* consists of spiral turns; the *oblique* follows a course oblique or slanting to the centre of the limb; and the *recurrent* folds back again to the part whence it started.

2204. *Circular* bandages are used for the *neck*, to retain dressings on any part of it, or for blisters, setons, &c.; for the *head*, to keep dressings on the forehead or any part contained within a circle passing round the head; for the *arm*, previous to bleeding; for the *leg*, above the knee; and for the *fingers*, &c.

2205. To *confine the ends of bandages*, some persons use pins, others slit the end for a short distance, and tie the two strips into a knot, and some use a strip of adhesive plaster. Always place the point of a pin in such a position that it should not be likely to prick the patient, or the person dressing the limb, or be likely to draw out by using the limb: therefore, as a general rule, turn the head of the pin from the free end of the bandage, or towards the upper part of the limb.

2206. The *oblique* bandage is generally used for arms and legs to retain dressings.

2207. The *spiral* bandage is generally applied to the trunk and extremities, but it is apt to fall off even when very carefully applied; therefore we generally use another called the *recurrent*, which folds back again.

2208. The *recurrent* bandage is the best kind of bandage that we can employ for general purposes. The method of putting it on is as follows:—Apply the end of the bandage that is free, with the outside of it next the skin, and hold this end with the finger and thumb of the left hand, while some one supports the head of the patient; then with the right hand pass the bandage over the place you are holding, and keep it crossed thus, until you can place your right forefinger upon the spot where it crosses the other bandage, where it

must be kept firm. Now hold the roll of the bandage in your left hand, with the palm looking upwards, and taking care to keep that part of the bandage between your right forefinger, and the roll in your left hand quite slack; turn your left hand over, and bring the bandage down upon the leg; then pass the roll under the leg towards your right hand, and repeat this until the leg is bandaged up to the knee, taking care not to drag the bandage at any time during the process of bandaging. When you arrive at the knee, pass the bandage round the leg in circles just below the knee, and pin it as usual. Bandaging is very easy, and if you once see any one apply a bandage properly, and attend to these rules, there will not be any difficulty; but bear one thing in mind, without which you will never put on a bandage even decently; and that is, never to drag or pull at a bandage, but make the turns while it is slack, and you have your right forefinger placed upon the point where it is to be folded down. When a limb is properly bandaged, the folds should run in a line corresponding to the shin-bone. Use, to retain dressings, and for varicose veins.

2209. A bandage for the chest is always placed upon the patient in a sitting posture; and it may be put on in circles or spirally. Use, in fractures of the ribs, to retain dressings, and after severe contusions.

2210. A bandage for the belly is placed on the patient as directed in the last, if spirally carrying it from above downwards. Use, to compress the belly after dropsy, or retain dressings.

2211. The hand is bandaged by crossing the bandage over the back of the hand. Use, to retain dressings.

2212. For the head, a bandage may be circular, or spiral, or both; in the latter case, commence by placing one circular turn just over the ears; then bring down from left to right, and round the head again so as to alternate a spiral with a circular turn. Use,

to retain dressings on the head or over the eye; but this form soon gets slack. The circular bandage is the best, crossing it over both eyes.

2213. *For the Foot*.—Place the end just above the outer ankle, and make two circular turns, to prevent its slipping; then bring it down from the inside of the foot over the instep towards the outer part; pass it under the sole of the foot, and upwards and inwards over the instep towards the inner ankle, then round the ankle, and repeat again. *Use*, to retain dressings to the instep heel, or ankle.

2214. *For the leg and foot*, commence and proceed as directed in 2213; then continue it up the leg as ordered in 2208.

2215. As it sometimes happens that it is necessary to apply a bandage at once, and the materials are not at hand, it is desirable to know how to substitute something else that any one may apply with ease. This is found to be effected by handkerchiefs, and an experienced surgeon (Mr. Mayor) has paid great attention to this subject, and brought it to much perfection. It is to him, therefore, that we are indebted for most of these hints.

2216. Any ordinary handkerchief will do; but a square of linen folded into various shapes answers better. The shapes generally required are as follows:—The triangle, the long square, the cravat and the cord.

2217. The *triangular handkerchief* is made by folding it from corner to corner. *Use*, as a bandage for the head. *Application*.—Place the base round the head, and the short part hanging down behind, then tie the long ends over it.

2218. The *long square* is made by folding the handkerchief into three parts, or double it once upon itself. *Use*, as a bandage to the ribs, belly, &c. If one handkerchief is not long enough, sew two together.

2219. The *cravat* is folded as usual with cravats. *Use*, as a bandage for the head, arms, legs, feet, neck, &c.

2220. The *cord* is used to compress vessels, when a knot is made in it, and placed over the vessel to be compressed. It is merely a handkerchief twisted in its long diameter.

2221. Sometimes it is necessary to apply two or more handkerchiefs, as in a broken collar-bone, or when it is necessary to keep dressings under the arm. It is applied by knotting the two ends of one handkerchief together, and passing the left arm through it, then passing another handkerchief under the right arm, and tying it. By this means we can brace the shoulders well back, and the handkerchief will press firmly over the broken collar-bone; besides, this form of bandage does not readily slip or get slack, but it requires to be combined with the sling, in order to keep the arm steady.

2222. When a woman has an inflamed breast that requires support or dressings to be kept to it, tie two ends of the handkerchief round her neck, and bring the body of it over the breast, and pass it upwards and backwards under the arm of that side, and tie the ends of those around the neck.

An excellent sling is formed by placing one handkerchief around the neck, and knotting the two ends over the breast-bone, then placing the other in triangle under the arm, to be supported with the base near to the hand, tie the ends over the handkerchief, and pin the top to the other part after passing it around the elbow.

2223. *APPARATUS*.—When a person receives a severe contusion of the leg or foot, or breaks his leg, or has painful ulcers over the leg, or is unable from some cause to bear the pressure of the bedclothes, it is advisable to know how to keep them from hurting the leg. This may be done by bending up a fire-guard, or placing a chair, resting upon the edge of its back and front of the seat over the leg, or putting a box on each side of it, and placing a plank over them; but the best way is to make a *cradle*, as it is called. This

is done by getting three pieces of wood, and three pieces of iron wire, and passing the wire or hoop through the wood. This can be placed to any height, and is very useful in all cases where pressure cannot be borne. Wooden hoops cut in halves answer better than the wire.

2224. When a person breaks his leg, and splints cannot be had directly, get a bunch of straw or twigs, and roll it up in a handkerchief, and place one on each side of the leg or arm, and bind another handkerchief firmly around them, or make a long bag about three inches in diameter, or even more, of coarse linen duck, or carpet, and stuff this full of brass, sawdust or sand, sew up the end, and use this the same as the twigs. It forms an excellent extemporaneous splint. Another good plan is to get a hat-box made of chip, and cut it into suitable lengths, or for want of all these, some bones out of a pair of stags, and run them through a stout piece of rug, protecting the leg with a fold of rug, linen, &c.

2225. When dry warmth is required to be applied to any part of the body fry a flour pancake and lay it over the part; or warm some sand and place in the patient's socks, and lay it to the part; salt does as well, and may be put into a paper bag; or warm water put into ginger-beer bottles or stone jars, and rolled up in flannel.

2226. IV. — MINOR OPERATIONS. — *Bleeding* is sometimes necessary at once in certain accidents, such as concussion, and therefore it is well to know how to do this. First of all, bind up the arm above the elbow with a piece of bandage or a handkerchief pretty firmly, then place your finger over the veins at the bend of the arm, and feel if there is any pulsation; if there is try another vein, and if it does not pulsate or beat, choose that one. Now rub the arm from the wrist towards the elbow, place the left thumb upon the vein, and hold the lancet as you would a pen, and nearly at right angles to the

vein, taking care to prevent its going in too far, by keeping the thumb near to the point, and resting the hand upon the little finger. Now place the point of the lancet on the vein, push it suddenly inwards, depress the elbow, and raise the hand upwards and outwards so as to cut obliquely across the vein. When sufficient blood is drawn off, which is known by feeling the pulse at the wrist, and near the thumb, bandage the arm. If the pulse feel like a piece of cord, more blood should be taken away, but if it is soft, and can be easily pressed, the bleeding should be stopped. When you bandage the arm, place a piece of lint over the opening made by the lancet, and pass a bandage lightly, but firmly, around the arm, so as to cross it over the bend of the elbow.

2227. *Dry Cupping* is performed by throwing a piece of paper dipped into spirit of wine, and ignited into a wine-glass, and placing it over the part, such as the neck, temples, &c. It thus draws the flesh into the glass, and causes a termination of blood to the part, which is useful in headache, or many other complaints. This is an excellent method of extracting the poison from wounds made by adders, mad dogs, fish, &c.

2228. *Ordinary Cupping* is performed the same as dry cupping, with this exception, that the part is scarified or scratched with a lancet, so as to cause the blood to flow. Then the glass is placed over it again with the lighted paper in it, and when sufficient blood has been taken away, then the parts are sponged, and a piece of sticking plaster applied over them.

2229. LEECHES AND THEIR APPLICATION. — The leech used for medical purposes is called the *hirudo Medicinalis*, to distinguish it from other varieties, such as the horse-leech and the Lisbon leech. It varies from two to four inches in length, and is of a blackish brown colour, marked on the back with six yellow spots, and edged with a yellow line on each side. Formerly leeches were supplied by

Lincolnshire, Yorkshire, and other fenny countries, but latterly most of the leeches are procured from France, where they are now becoming scarce.

2230. When leeches are applied to a part, it should be thoroughly freed from down or hair by shaving, and all liniments, &c. carefully and effectually cleaned away by washing. If the leech is hungry it will soon bite, but sometimes great difficulty is experienced in getting them to fasten on. When this is the case, roll the leech into a little porter, or moisten the surface with a little blood, or milk, or sugar and water. Leeches may be applied by holding them over the part with a piece of linen cloth, or by means of an inverted glass, under which they must be placed.

2231. When applied to the gums, care should be taken to use a leech glass, as they are apt to creep down the patient's throat; a large swan's quill will answer the purpose of a leech glass. When leeches are gorged they will drop off themselves; never *tear* them off from a person, but just dip the point of a moistened finger into some salt and touch them with it.

2232. *Leeches* are supposed to abstract about two drachms of blood, or six leeches draw about an ounce; but this is independent of the bleeding after they have come off, and more blood generally flows then than during the time they are sucking.

2233. After leeches come away, encourage the bleeding by flannels dipped in hot water and wrung out dry and then apply a warm "spongio-piline" poultice. If the bleeding is not to be encouraged, cover the bites with rag dipped in olive oil, or spread with spermaceti ointment, having previously sponged the parts clean.

2234. When bleeding continues from leech bites, and it is desirable to stop it, apply pressure with the fingers over the part, or dip a rag in a strong solution of alum and lay over them, or use the tincture of sesquichloride of iron, or apply a leaf of matico to them,

placing the under surface of the leaf next to the skin, or touch each bite with a finely-pointed piece of lunar caustic; and if all these tried in succession fail, pass a fine needle through a fold of the skin so as to include the bite, and twist a piece of thread round it. Be sure never to allow any one to go to sleep with leech bites bleeding, without watching them carefully; and never apply too many to children.

2235. After leeches have been used they should be placed in water, containing sixteen per cent. of salt, which facilitates the removal of the blood they contain; and they should afterwards be placed one by one in warm water, and the blood forced out by gentle pressure. The leeches should then be thrown into fresh water, which is to be renewed every twenty-four hours; and they may then be re-applied after an interval of eight or ten days; a second time they may be disorged.

2236. If a leech is accidentally swallowed, or by any means gets into the body, employ an emetic, or enema of salt and water.

2237. *Scarification* is useful in severe contusions, and inflammation of parts. It is performed by scratching or slightly cutting through the skin with a lancet, holding the lancet as you would a pen when you are ruling lines on paper.

2238. ACCIDENTS.—*Always send off for a surgeon immediately an accident occurs, but treat as directed until he arrives.* Burns.—If the skin is much injured, spread some linen pretty thickly with chalk ointment (979), and lay over the part, and give the patient some brandy and water if much exhausted; then send for a medical man. If not much injured, and very painful, use the same ointment or apply carded cotton dipped in lime-water and linseed oil (938). If you please you may lay cloths dipped in ether over the parts, or cold lotions (969, 970).

2239. *Scalds*.—Treat the same as burns, or cover with scraped raw potato; but the chalk ointment is the best. In

the absence of all these, cover the parts with treacle, and dust on plenty of flour.

2240. *Body in Flames*.—Lay the person down on the floor of the room, and throw the tablecloth, rug, or other large cloth over him, and roll him on the floor.

2241. *Dirt in the Eye*.—Place your forefinger upon the cheek-bone, having the patient before you; then draw up the finger, and you will probably be able to remove the dirt; but if this will not enable you to get at it, repeat this operation while you have a netting-needle or bodkin placed over the eyelid; this will turn it inside out, and enable you to remove the sand, or eyelash, &c., with the corner of a fine silk handkerchief. As soon as the substance is removed, bathe the eye with cold water and exclude the light for a day. If the inflammation is severe, take a purgative and use a refrigerant lotion (969).

2242. *Lime in the Eye*.—Syringe it well with warm vinegar and water (one ounce to eight ounces of water); take a purgative, and exclude light.

2243. *Iron or Steel Spicula in the Eye*.—This occurs while turning iron or steel in a lathe. Drop a solution of sulphate of copper (from one to three grains, of the salt to one ounce of water) into the eye, or keep the eye open in a wine-glassful of the solution. Take a purgative, bathe with cold lotion, and exclude light to keep down inflammation.

2244. *Dislocated Thumb*.—This is frequently produced by a fall. Make a clove hitch, by passing two loops of cord over the thumb, placing a piece of rag under the cord to prevent it cutting the thumb; then pull in the same line as the thumb. Afterwards apply a cold lotion (970).

2245. *Cuts and Wounds*.—Cut thin strips of sticking-plaster, and bring the parts together; or if large and deep, cut two broad pieces so as to look like the teeth of a comb, and place one on each side of the wound, which must be

cleaned previously. These pieces must be arranged so that they shall interlace one another; then by laying hold of the pieces on the right hand side with one hand, and those on the other side with the other hand, and pulling them from one another, the edges of the wound are brought together, and without any difficulty.

2246. *Ordinary Cuts* are dressed by thin strips applied by pressing down the plaster on one side of the wound, and keeping it there and pulling in the opposite direction; then suddenly depressing the hand when the edges of the wound are brought together.

2247. *Contusions*.—When they are very severe, lay a cloth over the part, and suspend a basin over it filled with cold lotion. (969, 970.) Put a piece of cotton into the basin, so that it shall allow the lotion to drop on the cloth, and thus keep it always wet.

2248. *Hæmorrhage*, when caused by an artery being divided or torn, may be known by the blood *jumping* out of the wound, and being of a bright scarlet colour. If a vein is injured, the blood is darker, and flows continuously. To stop the latter, apply pressure by means of a compress and bandage. To arrest arterial bleeding get a piece of wood (part of a mop-handle will do), and tie a piece of tape to one end of it; then tie a piece of tape loosely over the arm, and pass the other end of the wood under it; twist the stick round and round until the tape compresses the arm sufficiently to arrest the bleeding, and then confine the other end by tying the string round the arm. If the bleeding is very obstinate, and it occurs in the *arm*, place a cork underneath the string, on the inside of the fleshy part, where the artery may be felt beating by any one; if in the *leg*, place a cork in the direction of a line drawn from the inner part of the knee to a little of the outside of the groin. It is an excellent thing to accustom yourself to find out the position of these arteries, or indeed

any that are superficial, and to explain to every one in your house where they are, and how to stop bleeding. If a stick cannot be got, take a handkerchief, make a cord bandage of it, and tie a knot in the middle; the knot acts as a compress, and should be placed over the artery, while the two ends are to be tied around the thumb. Observe *always to place the ligature between the wound and the heart*. Putting your finger into a bleeding wound, and making pressure until a surgeon arrives, will generally stop violent bleeding.

2249. *Bleeding from the Nose*, from whatever cause, may generally be stopped by putting a plug of lint into the nostrils; if this does not do, apply a cold lotion to the forehead (969, 970); raise the head, and place both arms over the head, so that it will rest on both hands; dip the lint plug, *slightly moistened* into some powdered gum arabic, and plug the nostrils again; or dip the plug into equal parts of powdered gum arabic and alum, and plug the nose. If the bowels are confined, take a purgative.

2250. *Violent shocks* will sometimes stun a person, and he will remain unconscious. Untie strings, collars, &c.; loose anything that is tight, and interferes with the breathing; raise the head; see if there is bleeding from any part; apply smelling-salts to the nose, and hot bottles to the feet.

2251. *In Concussion*, the surface of the body is cold and pale, and the pulse weak and small, the breathing slow and *gentle*, and the pupil of the eye generally contracted or small. You can get an answer by speaking loud, so as to arouse the patient. Give a little brandy and water, keep the place quiet, apply warmth, and do not raise the head too high. If you tickle the feet, the patient feels it.

2252. *In Compression of the Brain*, from any cause, such as apoplexy, or a piece of fractured bone pressing on it, there is loss of sensation. If you tickle the feet, he does not feel it.

You cannot arouse him so as to get an answer. The pulse is slow and laboured; the breathing slow, laboured, and *snorting*; the pupil enlarged. Raise the head, unloose strings or tight things, and send for a surgeon. If one cannot be got at once, apply mustard-poultices to the feet, and leeches to the temples.

2253. *Choking*.—When a person has a fish bone in the throat, insert the forefinger, press upon the root of the tongue, so as to induce vomiting; if this does not do, let them swallow a *large* piece of potato or soft bread; and if these fail, give a mustard emetic.

2254. *Fainting, Hysterics, &c.*—Loosen the garments, bathe the temples with water or Eau de Cologne; fresh air; avoid bustle, and excessive sympathy.

2255. *Drowning*.—Attend to the following *essential rules*:—1. Lose no time. 2. Handle the body gently. 3. Carry the body with the head gently raised, and never hold it up by the feet. 4. Send for medical assistance immediately, and in the meantime act as follows:—1. Strip the body, rub it dry; then rub it in hot blankets, and place it in a warm bed in a warm room. 2. Cleanse away the froth and mucus from the nose and mouth. 3. Apply warm bricks, bottles, bags of sand, &c. to the arm-pits, between the thighs and soles of the feet. 4. Rub the surface of the body with the hands enclosed in warm dry worsted socks. 5. If possible, put the body into a warm bath. 6. To restore breathing, put the pipe of a common bellows into one nostril, carefully closing the other and the mouth; at the same time drawing downwards, and pushing gently backwards the upper part of the windpipe, to allow a more free admission of air; blow the bellows gently, in order to inflate the lungs, till the breast be raised a little; then set the mouth and nostrils free, and press gently on the chest; repeat this until signs of life appear. When the patient revives apply smelling-salts to the nose, give warm wine

or brandy and water. *Cautions*.—1. Never rub the body with salt or spirits. 2. Never roll the body on casks. 3. Continue the remedies for twelve hours without ceasing.

2256. *Hangings*.—Loose the cord, or whatever suspended the person, and proceed as for drowning, taking the additional precaution to apply eight or ten leeches to the temples.

2257. *Apparent Death from Drunkenness*.—Raise the head, unloose the clothes; maintain warmth of surface, and give a mustard emetic as soon as the person can swallow.

2258. *Apoplexy and Fits generally*.—Raise the head; unloose all tight clothes, strings, &c.; apply cold lotions (969, 970) to the head, which should be shaved; apply leeches to the temples, and send for a Surgeon.

2259. *Suffocation from noxious gases, &c.* Remove to the fresh air; dash cold vinegar and water in the face, neck and breast; keep up the warmth of the body; if necessary apply mustard poultices to the soles of the feet, and try artificial respirations as in drowning.

2260. *Lightning and Sun-stroke*.—Treat the same as apoplexy.

2261. POISONS, GENERAL OBSERVATIONS. — *The abbreviations used are as follows*:—*E.* effects or symptoms. *T.* treatment. *A.* antidotes or counter poisons. *D. A.* dangerous antidotes.

A poison is a substance which is capable of altering, or destroying, some or all of the functions necessary to life.

When a person is in good health and is suddenly attacked, after having taken some food or drink, with violent pain, cramp in the stomach, sense of sickness or nausea, vomiting, convulsive twitchings, and a sense of suffocation; or if he be seized, under the same circumstances, with giddiness, delirium, or unusual sleepiness, then poisoning may be supposed.

2262. Poisons have been divided into four classes:—1st. Those causing local

symptoms. 2nd. Those producing spasmodic symptoms. 3rd. Narcotic or sleepy symptoms; and 4th. Paralytic symptoms.

2263. Poisons may be mineral, animal, or vegetable.

2264. 1st. *Always send immediately for a medical man*; 2nd. Save all fluids vomited, and articles of food, cups, glasses, &c., used by the patient before being taken ill, and look them up; 3rd. Examine the cups, to guide you in your treatment; that is, smell them, and look at them.

2265. As a rule, give emetics after poisons that cause sleepiness and raving; chalk, milk, eggs, butter, and warm water, or oil, after poisons that cause vomiting and pain in the stomach and bowels, with purging; and when there is no inflammation about the throat, tickle it with a feather to excite vomiting.

2266. ARSENIC.—(*White arsenic*; *Orpiment*, or *yellow arsenic*; *realgar*, *red arsenic*; *Scheele's green*, or *arsenite of copper*; *king's yellow*; *ague drops*; and *arsenical paste*).—*E.* Little or no taste. Within an hour heat and pain in the stomach, followed by vomiting of green, yellow, and bloody matter, burning, and violent thirst; purging and twisting about the navel; pulse small, quick, and irregular; breathing laboured, voice hoarse, speaking painful; skin cold and clammy. Sometimes there are cramps and convulsions, followed by death.—*T.* Give plenty of warm water, *new milk* in large quantities, gruel, linseed tea, apply leeches to the bowels, foment, and give starch or gruel enemas. Scrape the iron rust off anything you can get at, mix it with plenty of water, and give in large draughts frequently, and give an emetic of sulphate of zinc (*white vitriol*). *Caution*. Never give large draughts of fluid until those given before have been vomited, because the stomach will not contract properly if filled with fluid, and the object is to get rid of the poison as speedily as possible.

2267. COPPER (*Blue vitriol*, or *blue*

*stone; verdigris; verditer; verdigrise crystals*).—E. An acid, rough, disagreeable taste in the mouth; a dry, parched tongue, with sense of strangling in the throat; coppery eructations; frequent spitting; nausea; frequent desire and effort to vomit, or copious vomiting; severe darting pains in the stomach; griping; frequent purging; belly swollen and painful; skin hot, and violent burning thirst; breathing difficult; intense headache and giddiness; followed by cold sweats, cramps in the legs, convulsions, and death.—A. White of eggs mixed with water (12 to one pint), to be given in wine-glassfuls every two minutes; Prussian blue; iron filings mixed with water, or very strong coffee.—D. A. Vinegar, bark, alkalies, gall nuts.—T. If there is much pain in the belly or stomach, apply leeches. Give large draughts of milk and water, to encourage vomiting.

2268. MERCURY (*Corrosive sublimate; calomel; red precipitate; vermilion; turbeth mineral; prussiate of mercury*).—E. Acid metallic taste; tightness and burning in the throat; pain in the back part of the mouth, stomach, and bowels; anxiety of countenance; nausea and vomiting of bloody and bilious fluids; profuse purging, and difficulty of making water; pulse small, hard, and quick; skin clammy, icy coldness of the hands and feet; and death in 24 or 36 hours.—A. White of eggs mixed with water, given as above (2267); milk; flour and water, mixed pretty thick; linseed tea; and barley water.—T. Give large draughts of warm water, if you cannot get anything else; foment the bowels with poppy-head fomentations, and apply leeches if the belly is very tender.

2269. ANTIMONY (*Tartar emetic; bristler of; kermes mineral*).—E. A rough metallic taste in the mouth, nausea, copious vomitings, frequent hiccup, purging, colic pains, frequent and violent cramps, sense of choking, severe heartburn, pain at the pit of the stomach, difficult breathing, wildness of speech, cramps in the legs, and

death.—A. Decoction or tincture of galls, strong tea; decoction, or powder of Peruvian bark.—D. A. White vitriol, ipecacuanha, as emetics.—T. Give large draughts of water, or sugar and water, to promote vomiting; apply leeches to the throat and stomach, if painful; and give one grain of extract of opium dissolved in a wine-glassful of sugar and water, as soon as the vomiting ceases, and repeat three times at intervals of a quarter of an hour.

2270. TIN.—(*Butter of tin; putty powder*).—E. Colic and purging.—A. Milk.—T. Give warm or cold water to promote vomiting, or tickle the throat with a feather.

2271. ZINC.—(*White Vitriol; flowers of; chloride of*).—E. An astringent taste, sensation of choking, nausea, vomiting, purging, pain and burning in the throat and stomach, difficult breathing, pallor and coldness of the surface, pinched face, cramps of the extremities, but, with the exception of the chloride, seldom death.—A. For the two first give copious draughts of milk, and white of eggs and water, mucilage, and olive oil; for the third, carbonate of soda, and warm water in frequent draughts, with the same as for the other compounds.—T. Relieve urgent symptoms by leeching and fomentations, and after the vomiting give castor-oil. For the chloride use frictions and warmth. (See 2225.)

2272. SILVER. (*Lunar caustic; flowers of silver*). GOLD (*Chloride of*); and BISMUTH (*nitrate; flowers of; pearl white*), are not frequently met with as poisons.—E. Burning pain in the throat, mouth, and the usual symptoms of corrosive poisons.—A. For silver, common salt and water; for gold and bismuth, no antidotes are known.—T. Give milk and mucilaginous fluids, and castor-oil.

2273. ACIDS.—(*Hydrochloride or spirit of salt; nitric or aquafortis; sulphuric or oil of vitriol*).—E. Acid burning taste, acute pain in the gullet and throat, vomiting of bloody fluid, which effervesces when chalk is added to it; hic-

cough, tenderness of the belly, cold sweats, pinched face, convulsions, and death.—A. Give *calcined* magnesia, chalk, soap and water.—D. A. Carbonated alkalies. *Caution*.—Do not give water if oil of vitriol has been taken.—T. Excite vomiting; give fluids after the poison has been ejected.

2274. CHLORINE (gas).—E. Violent coughing, tightness of the chest, debility, inability to stand.—A. The vapour of caustic ammonia to be inhaled, or 10 drops of liquid ammonia to one ounce of water to be taken.—T. Dash cold water over the face, and relieve urgent symptoms.

2275. LEAD (*sugar of; red lead; wine sweetened by; and water impregnated with*).—E. Sugary astringent metallic taste, tightness of the throat, colic pains, violent vomiting, hiccough, convulsions, and death.—A. Epsom or Glauber's salts; plaster of Paris; or phosphate of soda.—T. An emetic of sulphate of zinc (24 grains to half pint of water); leeches to belly, and fomentations if necessary.

2276. PHOSPHORUS.—E. Intense burning and pain in the throat and stomach.—A. Magnesia and carbonate of soda.—T. Large draughts of cold water, and tickle the throat with a feather. *Caution*.—Do not give oil or milk.

2277. LIME.—E. Burning in the throat and stomach, cramps in the belly, hiccough, vomiting, and paralysis of limbs.—A. Vinegar or lemon juice.—T. Thin starch water to be drunk frequently.

2278. ALKALIES (*Caustic; potash; soda; ammonia*).—E. Acrid, hot, disagreeable taste; burning in the throat, nausea, and vomiting bloody matter, profuse purging, pain in the stomach, colic, convulsions, and death.—A. Vinegar and vegetable acids.—T. Give linseed tea, milk, almond or olive oil, and excite vomiting.

2279. BARYTA (*carbonate; pure and muriate*). (See Lime.)

2280. NITRE.—E. Heartburn, nausea, violent vomiting, purging, convulsions,

difficult breathing, violent pain in the bowels, and death.—T. (See Arsenic.)

2281. NARCOTIC POISONS (*bane berries; fools' parsley; deadly nightshade; water hemlock; thorn apple; opium; camphor, &c.*).—E. Giddiness, faintness, nausea, vomiting, stupor, delirium, and death.—T. Give emetics, large draughts of fluids, tickle the throat, apply smelling salts to the nose, dash cold water over the face and chest, apply mustard poultices, and, above all, endeavour to rouse the patient by walking between two persons; and, if possible, by electricity.

2282. VEGETABLE IRRITATING POISONS.—*Mezereon; monk's-hood; bitter apple; gamboge; white hellebore, &c.*—E. Acrid, biting, bitter taste, choking sensation, dryness of the throat, retching, vomiting, purging, pains in the stomach and bowels, breathing difficult, and death.—T. Give emetics of chamomile, mustard, or sulphur of zinc; large draughts of warm milk, or other bland fluids; foment and leech the belly if necessary, and give strong infusion of coffee.

2283. OXALIC ACID.—E. Vomiting and acute pain in the stomach, general debility, cramps, and death.—A. Chalk.—T. Give large draughts of lime-water or magnesia.

2284. SPANISH FLIES.—E. Acrid taste, burning heat in the throat, stomach, and belly; bloody vomitings, colic, purging, retention of urine, convulsions, death.—T. Large draughts of olive oil, thin gruel, milk, starch enemata, and camphorated water.

2285. POISONOUS FISH.—*Old-wife; sea-lobster; mussel; tunny; blower; rock-fish, &c.*—E. Intense pain in the stomach after swallowing the fish, vomiting, purging, and sometimes cramps.—T. Give an emetic, excite vomiting by tickling the throat, and plenty of warm water. Follow emetics by active purgatives, abate inflammation by the usual remedies, and drink freely of sugar and water.

2286. BITES OF REPTILES.—*Viper; black viper; Indian serpents; rattlesnake*

*snake*.—E. Violent and quick inflammation of the part, extending towards the body, soon becoming livid; nausea, vomiting, convulsions, difficult breathing, mortification, cold, sweats, and death.—T. Suppose that the wrist has been bitten, immediately tie a tape between the wound and the heart, scarify the parts with a penknife, razor, or lancet, and apply a cupping-glass over the bite, frequently removing it and bathing the wound with volatile alkali, or heat a poker and burn the wound well, or drop some of Sir Wm. Burnett's Disinfecting Fluid into the wound. Give plenty of warm drinks, and cover up in bed.

2287. MAD ANIMALS, BITE OF.—E. Hydrophobia, or a fear of fluids.—T. Tie a string tightly over the part, cut out the bite, and cauterize the wound with a red-hot poker, lunar caustic, or Sir Wm. Burnett's Disinfecting Fluid. Then apply a piece of "spongio-piline," give a purgative, and plenty of warm drink. Whenever chloroform can be procured, sprinkle a few drops upon a handkerchief and apply to the nose and mouth of the patient before cauterising the wound. When the breathing appears difficult, cease the application of the chloroform. A physician, writing in the *Times*, strongly urges this course, and states that there is no danger, with ordinary care, in the application of the chloroform, while the cauterisation may be more effectively performed.

2288. INSECT STINGS.—*Wasp, bee, gnat, hornet, gad-fly, scorpion*.—E. Swelling, nausea, and fever.—T. Press the barrel of a watch-key over the part, so as to expose the sting, which must be removed. Lay a rag moistened with hartshorn and oil over the part. Give six or eight drops of hartshorn in two ounces of infusion of chamomile, and cover up in bed.

2289. OYSTER KETCHUP.—Take fine fresh Milton oysters; wash them in their own liquor, skim it, pound them in a marble mortar, to a pint of oysters add a pint of sherry, boil them up, and

add an ounce of salt, two drachms of pounded mace, and one of cayenne,—let it just boil up again, skim it, and rub it through a sieve; and when cold bottle it, then cork it well, and seal it down.

2290. OX-CHEEK STEWED.—Prepare the day before it is to be eaten; clean the cheek and put it into soft water, just warm; let it lie three or four hours, then put it into cold water, and let it soak all night; next day wipe it clean, put it into a stew-pan, and just cover it with water;—skim it well when it is coming to a boil, then put two whole onions, stick two or three cloves into each, three turnips quartered, a couple of carrots sliced, two bay-leaves, and twenty-four corns of allspice, a head of celery, and a bundle of sweet herbs, pepper, and salt; add cayenne and garlic, in such proportions as the palate that requires them may desire. Let it stew gently till perfectly tender, about three hours; then take out the cheek, divide it into pieces, fit to help at table; skim, and strain the gravy; melt an ounce and a half of butter in a stew pan; stir into it as much flour as it will take up; mix with it by degrees a pint and a half of the gravy; add to it a table-spoonful of mushroom or walnut ketchup, or port wine, and give it a boil. Serve up in a soup or ragout-dish, or make it into barley broth. This is very economical, nourishing, and savoury meal.

2291. CHILDREN AND CUTLERY.—Serious accidents having occurred to babies, through their catching hold of the blades of sharp instruments, the following hint will be useful. If a child lays hold of a knife or razor, do not try to pull it away, or to force open the hand. But holding the child's hand that is empty, offer to its other hand, anything nice or pretty, and it will immediately open the hand, and let the dangerous instrument fall.

2292. COFFEE MILK.—FOR THE SICK ROOM.—Boil a dessert-spoonful of ground coffee, in nearly a pint of milk, a quarter of an hour, then put into it a shaving

or two of isinglass, and clear it; let it boil a few minutes and set it by the side of the fire to clarify. This is a very fine breakfast; but it should be sweetened with sugar of a good quality.

**2293. FRECKLES.**—To disperse them, take one ounce of lemon juice, a quarter of a drachm of powdered borax, and half a drachm of sugar; mix them, and let them stand a few days in a glass bottle till the liquor is fit for use; then rub it on the hands and face occasionally. (See 172.)

**2294. CHLOROFORMING BEES.**—The quantity of chloroform required for an ordinary hive is the sixth part of an ounce; a very large hive may take nearly a quarter of an ounce. Set down a table opposite to, and about four feet distant from the hive; on the table spread a thick linen cloth, in the centre of the table place a small shallow breakfast plate, which cover with a piece of wire gauze, to prevent the bees from coming in immediate contact with the chloroform. Now quickly and cautiously lift the hive from the board on which it is standing, set it down on the top of the table, keeping the plate in the centre; cover the hive closely up with cloths, and in twenty minutes or so the bees are not only sound asleep, but not one is left among the combs; the whole of them are lying helpless on the table. You now remove what honey you think fit, replace the hive in its old stand, and the bees, as they recover, will return to their domicile. A bright, calm, sunny day is the best; and you should commence your operations early in the morning, before many of them are abroad.

**2295. ARNICA FOR BITES.**—A correspondent of the *Times* says:—"Noticing in your paper an account of the death of a man from the bite of a cat, I beg to trouble you with the following case, which occurred to myself about three weeks ago:—I took a strange dog home, which produced consternation among the cats. One of them I took up, to effect a reconciliation between her and the dog. In her terror

she bit me so severely on the first finger of the left hand, as not only to cause four of the teeth of her lower jaw to enter the flesh, but so agonising was her bite that the pressure of her palate caused the finger to swell at the joint on the opposite side to where the lower teeth entered the finger. In a minute or two the pain was about as excruciating as anything I ever felt—certainly greater than I have suffered from a wound. I got some tincture of arnica, diluted with about twelve times the quantity of water, and proceeded to bathe the finger well with it. In about half a minute the blood began to flow freely, the pain ceased, and the swelling abated, and up to this moment I have had no further inconvenience nor pain, not even soreness."

**2296. A VERY PLEASANT PERFUME,** and also preventive against moths, may be made of the following ingredients:—Take of cloves, carraway seeds, nutmeg, mace, cinnamon, and Tonquin beans, of each one ounce; then add as much Florentine orris-root as will equal the other ingredients put together. Grind the whole well to powder, and then put it in little bags, among your clothes, &c.

**2297. MAPS AND CHARTS.**—Maps, charts, or engravings may be effectually varnished by running a very delicate coating of gutta percha solution over their surface. It is perfectly transparent, and is said to improve the appearance of pictures. By coating both sides of important documents they can be kept waterproof and preserved perfectly.

**2298. CEMENT FOR LEATHER AND CLOTH.**—An adhesive material for uniting the parts of boots and shoes, and for the seams of articles of clothing, may be made thus:—Take one pound of gutta percha, four ounces of India rubber, two ounces of pitch, one ounce of shellac, two ounces of oil. The ingredients are to be melted together, and used hot.

**2299. ARTIFICIAL MANNERS.**—Artificial manners, and such as spring

from good taste and refinement, can never be mistaken, and differ as widely as gold and tinsel. How captivating is gentleness of manner derived from true humility, and how faint is every imitation; the one resembles a glorious rainbow, spanning a dark cloud—the other, its pale attendant, the water-gall. That suavity of manner which renders a real gentlewoman courteous to all, and careful to avoid giving offence, is often copied by those who merely subject themselves to certain rules of etiquette; but very awkward is the copy! Warm professions of regard are bestowed on those who do not expect them, and the esteem which is due to merit appears to be lavished on every one alike. And as true humility, blended with a right appreciation of self-respect, gives a pleasing cast to the countenance, so from a sincere and open disposition springs that artlessness of manner which disarms all prejudice. Feeling, on the contrary, is ridiculous when affected, and, even when real, should not be too openly manifested. Let the manners arise from the mind, and let there be no disguise for the genuine emotions of the heart.

**2300. DECOCTION OF Sarsaparilla.**—Take four ounces of the root, slice it down, put the slices into four pints of water, and simmer for four hours. Take out the sarsaparilla, and beat it into a mash; put it into the liquor again, and boil down to two pints, then strain and cool the liquor. Dose—a wine-glassful three times a-day. Use—to purify the blood after a course of mercury; or, indeed, whenever any taint is given to the constitution, vitiating the blood, and producing eruptive affections.

**2301. HOT WATER.**—In bruises, hot water is most efficacious, both by means of insertion and fomentation, in removing pain, and totally preventing discolouration and stiffness. It has the same effect after a blow. It should be applied as quickly as possible, and as hot as it can be borne. Insertion in hot

water will cure that troublesome and painful thing called a whitlow. The efficacy of hot water in preventing the ill effects of fatigue is too well known to require notice.

### 2302. PRESERVING POTATOES.

—The preservation of potatoes by dipping them in boiling water is a valuable and useful discovery. Large quantities may be cured at once, by putting them into a basket as large as the vessel containing the boiling water will admit, and then just dipping them a minute or two, at the utmost. The germ, which is so near the skin, is thus destroyed without injury to the potato. In this way several tons might be cured in a few hours. They should be then dried in a warm oven, and laid up in sacks, secure from the frost, in a dry place. (See 122 to 135.)

**2303. SQUINTING.**—Squinting frequently arises from the unequal strength of the eyes, the weaker eye being turned away from the object, to avoid the fatigue of exertion. Cases of squinting of long standing have often been cured by covering the stronger eye, and thereby compelling the weaker one to exertion.

**2304. SCRATCHES.**—Trifling as scratches often seem, they ought never to be neglected, but should be covered and protected, and kept clean and dry, until they have completely healed. If there is the least appearance of inflammation, no time should be lost in applying a large bread and water poultice, or hot flannels repeatedly applied, or even leeches in good numbers may be put on at some distance from each other.

**2305. BLACK OR WHITE ELDERBERRY WINE.**—Gather the berries ripe and dry, prick them, bruise them with your hands, and strain them. Set the liquor by in glazed earthen vessels for twelve hours, to settle; put to every pint of juice a pint and a half of water, and to every gallon of this liquor three pounds of good moist sugar; set in a kettle over the fire, and when it is ready to boil clarify it

with the white of four or five eggs; let it boil one hour, and when it is almost cold, work it with strong ale yeast, and tun it, filling up the vessel from time to time with the same liquor, saved on purpose, as it sinks by working. In a month's time, if the vessel holds about eight gallons, it will be fine and fit to bottle, and, after bottling, will be fit to drink in twelve months.

2306. DRY COUGH.—Take of powdered gum-arabic, half an ounce; liquorice-juice, half an ounce. Dissolve the gum first in warm water, squeeze in the juice of a lemon, then add of pargoric two drachms; syrup of squills, one drachm. Cork all in a bottle, and shake well. Take one tea-spoonful when the cough is troublesome. (See 996).

2307. CLEAN WHITE VEILS.—Put the veil in a solution of white soap, and let it simmer a quarter of an hour; squeeze it in some warm water and soap till quite clean. Rinse it from soap, and then in clean cold water, in which is a drop of liquid blue; then pour boiling water on a tea-spoonful of starch, run the veil through this, and clear it well by clapping it. Afterwards pin it out, keeping the edges straight and even.

2308. CANARIES.—To distinguish a cock-bird from a hen, observe the bird when it is singing, and if it be a cock you will perceive the throat heaving with a pulse-like motion, a peculiarity which is scarcely perceptible in the hen. (See 287).

2309. Feed young canaries with white and yolk of hard egg, mixed together with a little bread steeped in water. This should be pressed and placed in one vessel, while in another should be put some boiled rape-seed, washed in fresh water. Change the food every day. When they are a month old, put them into separate cages.

2310. Cut the claws of cage birds occasionally, when they become too long, but in doing so be careful not to draw blood.

2311. BULLFINCHES.—Old birds should be fed with German Paste, No 2, and occasionally rape-seed. The Ger-

mans occasionally give them a little poppy-seed, and a grain or two of rice, steeped in Canary wine, when teaching them to pipe, as a reward for the progress they make. Bird organs, or flageolets, are used to teach them. They breed three or four times a year. The young require to be kept very warm, and to be fed every two hours with rape-seed, soaked for several hours in cold water, afterwards scalded and strained, bruised, mixed with bread, and moistened with milk. One, two, or three mouthfuls at a time.

2312. SQUIRRELS.—In a domestic state these little animals are fed with hazel nuts, or indeed any kind of nuts; and occasionally bread and milk. They should be kept very clean.

2313. LINNETS.—Cock-birds are browner on the back than the hens, and have some of the large feathers of the wings white up to the quills. Canary and hemp-seed, with occasionally a little groundsel, water-cress, chickweed, &c., constitute their food.

2314. THRUSHES.—A cock may be distinguished from a hen by a darker back, and the more glossy appearance of the feathers. The belly also is white. Their natural food is insects, worms, and snails. In a domesticated state they will eat raw meat, but snails and worms should be procured for them. Young birds are hatched about the middle of April, and should be kept very warm. They should be fed with raw meat, cut small, or bread mixed in milk with hemp-seed well bruised: when they can feed themselves give them lean meat cut small, and mixed with bread, or German paste, plenty of clean water, and keep them in a warm, dry, and sunny situation. (See 817).

2315. WINES FROM RHUBARB, GRAPES (UNRIPE), CURRANTS, GOOSEBERRIES, &c.—The whole art of wine-making consists in the proper management of the fermentation process; the same quantity of fruit, whether it be rhubarb, currants, gooseberries, grapes (unripe), leaves, tops, and

tendrils, water, and sugar, will produce two different kinds of wine, by varying the process of fermentation only—that is, a dry wine like sherry, or a brisk one like champagne; but neither rhubarb, currants, nor gooseberries will produce a wine with the true champagne flavour; it is to be obtained only from the fruit of the grape, ripe or unripe, its leaves, tops, and tendrils. The receipt I here give will do for rhubarb, or any of the above-mentioned fruits. *To make ten gallons of English champagne, imperial measure*:—Take fifty pounds of rhubarb and thirty-seven pounds of fine moist sugar. Provide a tub that will hold from fifteen to twenty gallons, taking care that it has a hole for a tap near the bottom. In this tub bruise the rhubarb; when done, add four gallons of water; let the whole be well stirred together; cover the tub with a cloth or blanket, and let the materials stand for twenty-four hours; then draw off the liquor through the tap; add one or two more gallons of water to the pulp, let it be well stirred, and then allowed to remain an hour or two to settle, then draw off; mix the two liquors together, and in it dissolve the sugar. Let the tub be made clean, and return the liquor to it, cover it with a blanket, and place it in a room the temperature of which is not below 60° Fahr.; here it is to remain for twenty-four, forty-eight, or more hours, until there is an appearance of fermentation having begun, when it should be drawn off into the ten-gallon cask, as fine as possible, which cask must be filled up to the bung-hole with water; if there is not liquor enough, let it lean to one side a little, that it may discharge itself; if there is any liquor left in the tub not quite fine, pass it through flannel, and fill up with that instead of water. As the fermentation proceeds and the liquor diminishes, it must be filled up daily, to encourage the fermentation, for ten or twelve days; it then becomes more moderate, when the bung should be put in, and a gimlet hole made at

the side of it, fitted with a spile; this spile should be taken out every two or three days, according to the state of the fermentation, for eight or ten days, to allow some of the carbonic acid gas to escape. When this state is passed, the cask may be kept full by pouring a little liquor in at the vent-hole once a week or ten days, for three or four weeks. This operation is performed at long intervals, of a month or more, till the end of December, when on a fine frosty day it should be drawn off from the lees as fine as possible; the turbid part passed through flannel. Make the cask clean, return the liquor to it, with one drachm of isinglass (pure) dissolved in a little water; stir the whole together, and put the bung in firmly. Choose a clear dry day in March for bottling it. They should be champagne bottles—common wine bottles are not strong enough; secure the corks in a proper manner with wire, &c. I generally make up the liquor to two or three pints over the ten gallons, which I bottle for the purpose of filling the cask as it is wanted. For several years past I have made a wine with ripe and unripe grapes, according to the season, equally as good as any foreign. It has always spirit enough without the addition of brandy, which, Dr. Macculloch says, in his *Treatise on Wines* (published twenty or thirty years ago), spoils all wines; a proper fermentation produces spirit enough. The way to obtain a dry wine from these materials is to keep the cask constantly filled up to the bung-hole, daily or every other day, as long as any fermentation is perceptible, by applying the ear near to the hole; the bung may then be put in lightly for a time, before finally fixing it; it may be racked off on a fine day in December, and fined with isinglass as above directed, and bottled in March. — *William Bartlett, Surgeon, Burbage.*

2316. CONVULSIONS.—Mr. W. C. Williamson, surgeon, reports an interesting and remarkable case, in which he saved the life of an infant in con-

vulsions, by the use of chloroform. He commenced the use of it at nine o'clock one evening, at which period the child was rapidly sinking, numerous remedies having been already tried without effect. He dropped half a drachm of chloroform into a thin muslin handkerchief, and held it about an inch from the infant's face. In about two minutes the convulsions gave way, and the child fell into a sleep. By slightly releasing the child from the influence of the chloroform, he was able to administer food, by which the child was nourished and strengthened. The chloroform was continually administered in the manner described, from Friday evening at nine o'clock until Monday morning at nine. This treatment lasted sixty hours, and sixteen ounces of chloroform were used. Mr. Williamson says he has no doubt that the chloroform was instrumental in saving the infant's life; and that no injurious effects, however trivial, from the treatment adopted, have subsequently appeared.

**2317. CORNS.**—Boil a potato in its skin, and after it is boiled take the skin and put the inside of it to the corn, and leave it on for about twelve hours; at the end of that period the corn will be much better. The above useful and simple receipt has been tried and found to effect a remedy.

**2318. CLEANSING FEATHERS OF THEIR ANIMAL OIL.**—The following receipt gained a premium from the Society of Arts:—Take for every gallon of clean water one pound of quicklime, mix them well together, and when the undissolved lime is precipitated in fine powder, pour off the clean lime-water for use. Put the feathers to be cleaned in another tub, and add to them a quantity of the clean lime-water, sufficient to cover them about three inches when well immersed and stirred about therein. The feathers, when thoroughly moistened, will sink down, and should remain in the lime-water three or four days; after which, the foul liquor should be sepa-

rated from them, by laying them in a sieve. The feathers should be afterwards well washed in clean water, and dried upon nets, the meshes of which may be about the fineness of cabbage-nets. The feathers must be, from time to time, shaken on the nets, and as they get dry, will fall through the meshes, and are to be collected for use. The admission of air will be serviceable in drying. The process will be completed in three weeks; and, after being thus prepared, the feathers will only require to be beaten to get rid of the dust. (See 2042.)

**2319. PRESTON SALTS.**—Take of sal ammoniac and salts of tartar of each about two ounces; pound up the sal ammoniac into small bits, and mix them gently with the salts of tartar. After being well mixed, add a few drops of oil of lavender, sufficient to scent, and also a little musk; stop up in a glass bottle, and when required for use, add a few drops of water, or spirits of hartshorn, when you will immediately have strong smelling salts. The musk, being expensive, may be omitted; it will still be good. Any person can for a few pence obtain these ingredients at any druggist's, and they will make salts, which, to buy, prepared, would cost, at the least, eighteenpence.

**2320. FIG-PUDDING.**—Three quarters of a pound of grated bread, half a pound of best figs, six ounces of suet, six ounces of moist sugar, a teacupful of milk, and a little nutmeg. The figs and suet must be chopped very fine. Mix the bread and suet first, then the figs, sugar, and nutmegs, one egg beaten well, and lastly the milk. Boil in a mould four hours. To be eaten with sweet sauce.

**2321. PRESERVING EGGS.**—It has been long known to housewives, that the great secret of preserving eggs fresh, is to place the small end downwards, and keep it in that position—other requisites not being neglected, such as to have the eggs perfectly fresh when deposited for keeping, not allowing them to become wet, keeping them

cool in warm weather, and avoiding freezing in winter. Take an inch-board of convenient size, say a foot wide, and two and a half feet long, and bore it full of holes, each about an inch and a half in diameter; a board of this size may have five dozen holes bored in it, for as many eggs. Then nail strips of thin board two inches wide round the edges, to serve as a ledge. Boards such as this may now be made to constitute the shelves of a cupboard in a cool cellar. The only precaution necessary is to place the eggs as fast as they are laid in these holes, with the small end downwards, and they will keep for months perfectly fresh. The great advantage of this plan is the perfect ease with which the fresh eggs are packed away, and again obtained when wanted. A carpenter would make such a board for a trifling charge. (See 497, 790.)

**2322. GUM ARABIC STARCH.** — Take two ounces of white gum arabic powder, put it into a pitcher, and pour on it a pint or more of boiling water (according to the degree of strength you desire), and then, having covered it, let it set all night. In the morning pour it carefully from the dregs into a clean bottle, cork it, and keep it for use. A tablespoonful of gum water stirred into a pint of starch that has been made in the usual manner, will give the lawns (either white, black, or printed), a look of newness, when nothing else can restore them after washing. It is also good, much diluted, for thin white muslin and bobbinet.

**2323. HOME-MADE BREAD.** — To one quartern of flour (three pounds and a-half), add a dessert-spoonful of salt, and mix them well; mix about two table-spoonfuls of good fresh yeast (see 2160) with half-a-pint of water a little warm, but not hot; make a hole with your hand in the middle of the flour, but not quite touching the bottom of the pan; pour the water and yeast into this hole, and stir it with a spoon till you have made a thin batter; sprinkle this over with flour, cover the pan over with a dry cloth, and let it

stand in a warm room for an hour; not near the fire, except in cold weather, and then not too close; then add a pint of water a little warm, and knead the whole well together, till the dough comes clean through the hand; some flour will require a little more water—but in this experience must be your guide: let it stand again for about a quarter of an hour, and then bake at pleasure.

**2324. TO MAKE BREAD WITH GERMAN YEAST.** — To one quartern of flour add a dessert-spoonful of salt as before; dissolve one ounce of dried German yeast in about three table-spoonfuls of cold water, add to this one pint and a half of water a little warm, and pour the whole into the flour; knead it well immediately, and let it stand as before directed for one hour: then bake at pleasure. It will not hurt if you make up a peck of flour at once, and bake three or four loaves in succession, provided you do not keep the dough too warm. German yeast may be obtained at almost any corn-chandler's in the metropolis and suburbs. In winter it will keep good for a week in a dry place, and in summer it should be kept in cold water, and the water changed every day. Wheat-meal requires a little more yeast than fine flour, or a longer time to stand in the dough for rising. For domestic baking, in the absence of a large oven, Ball's Portable Revolving Ovens (see 2159) can be used, in front of any fire, bake equally, perfectly, and produce five pounds of bread from three pounds and a half of flour, without the addition of potatoes or rice. With one of these ovens and a good side oven you may make a double use of your fire, by baking at the side and in front at the same time; and where there is no side oven, or only a bad one, these ovens are invaluable. You may bake five pounds and a half of bread, or eight pounds of meat, in one hour and a half, without depriving the room of the heat or comfort of the fire; and two ovens may be used at the same time in front of an ordinary fire, side by side.

**2325. PICKLING.**—There are three methods of pickling; the most simple is, merely to put the article into cold vinegar. The strongest pickling vinegar of white wine should always be used for pickles; and for such as are wanted for white pickles, use distilled vinegar. This method we recommend for all such vegetables as, being hot themselves, do not require the addition of spice, and such as do not require to be softened by heat, such as capsicums, chili, nasturtiums, button onions, radish-pods, horseradish, garlic, and eschalots. Half fill the jars with best vinegar, fill them up with the vegetables, and tie down immediately with bladder and leather. One advantage of this plan is, that those who grow nasturtiums, radish-pods, and so forth, in their own gardens, may gather them from day to day when they are exactly of the proper growth. They are very much better if pickled quite fresh, and all of a size, which can scarcely be obtained if they be pickled all at the same time. The onions should be dropped in the vinegar as fast as peeled; this secures their colour. The horseradish should be scraped a little outside, and cut up in rounds half an inch deep. Barberries for garnish: gather fine full bunches before they are quite ripe; pick away all bits of stalk, and leaf, and injured berries, and drop them in cold vinegar; they may be kept in salt and water, changing the brine whenever it begins to ferment; but the vinegar is best.

**2326. THE SECOND METHOD OF PICKLING** is that of heating vinegar and spice, and pouring them hot over the vegetables to be pickled, which are previously prepared by sprinkling with salt, or immersing in brine. It is better not to boil the vinegar, by which process its strength is evaporated. Put the vinegar and spice into a jar, bung it down tightly, tie a bladder over, and let it stand on the hob or on a trivet by the side of the fire for three or four days, well shaken three or four times a day; this method may be applied to

gherkins, French beans, cabbage, brocoli, cauliflowers, onions, and so forth.

**2327. THE THIRD METHOD OF PICKLING** is when the vegetables are in a greater or less degree done over the fire. Walnuts, artichokes, artichoke bottoms, and beet-roots are done thus, and sometimes onions and cauliflowers.

**2328. FRENCH BEANS.**—The best sort for this purpose are white runners. They are very large, long beans, but should be gathered quite young, before they are half grown; they may be done in the same way as gherkins, but will not require so long a time.

**2329. ONIONS.**—Onions should be chosen about the size of marbles, the silver-skinned sort are the best. Prepare a brine and put them into it hot; let them remain one or two days, then drain them, and, when quite dry, put them into clean dry jars, and cover them with hot pickle, in every quart of which has been steeped one ounce each of horseradish sliced, black pepper, allspice, and salt, with or without mustard seed. In all pickles the vinegar should always be two inches or more above the vegetables, as it is sure to shrink, and if the vegetables are not thoroughly immersed in pickle they will not keep.

**2330. RED CABBAGE.**—Choose fine firm cabbages: the largest are not the best; trim off the outside leaves; quarter the cabbage, take out the large stalk, slice the quarters into a colander, and sprinkle a little salt between the layers; put but a little salt—too much will spoil the colour; let it remain in the colander till next day, shake it well, that all the brine may run off; put it in jars, cover it with a hot pickle composed of black pepper and allspice, of each an ounce; ginger pounded, horseradish sliced, and salt, of each half an ounce to every quart of vinegar (steeped as above directed); two capsicums may be added to a quart, or one drachm of cayenne.

**2331. GARLIC AND ESCHALOTS.**—Garlic and eschalots may be pickled in the same way as onions.

**2332. MELONS, MANGOES, AND LONG**

**CUCUMBERS** may all be done in the same manner. Melons should not be much more than half grown; cucumbers full grown, but not overgrown. Cut off the top, but leave it hanging by a bit of rind, which is to serve as a hinge to a box-lid; with a marrow-spoon scoop out all the seeds, and fill the fruit with equal parts of mustard seed, ground pepper, and ginger, or flour of mustard instead of the seed, and two or three cloves of garlic. The lid which incloses the spice may be sewed down or tied, by running a white thread through the cucumber, and through the lid, and then, tying it together, cut off the ends. The pickle may be prepared with the spices directed for cucumbers, or with the following, which bears a nearer resemblance to India. To each quart of vinegar put salt, flour of mustard, curry powder, bruised ginger, turmeric, half an ounce of each, cayenne pepper one drachm, all rubbed together with a large glassful of salad oil; eschalots two ounces, and garlic half an ounce, sliced; steep the spice in the vinegar as before directed, and put the vegetables into it hot.

**2333. BROCOLI OR CAULIFLOWERS.**—Choose such as are firm, yet of their full size; cut away all the leaves, and pare the stalk; pull away the flowers by bunches, steep in brine two days, then drain them; wipe them dry and put them into hot pickle; or merely infuse for three days three ounces of curry powder in every quart of vinegar.

**2334. WALNUTS.**—Be particular in obtaining them exactly at the proper season; if they go beyond the middle of July, there is danger of their becoming hard and woody. Steep them a week in brine. If they are wanted to be soon ready for use, prick them with a pin, or run a larding pin several times through them; but if they are not wanted in haste, this method had better be left alone. Put them into a kettle of brine, and give them a gentle simmer, then drain them on a sieve and lay them on fish drainers in any airy place, until they become black, which may be two

days; then add hot pickle of vinegar in which has been steeped, in the proportion of a quart, black pepper one ounce, ginger, eschalots, salt, and mustard seed, one ounce each. Most pickle vinegar, when the vegetables are used, may be turned to use, walnut pickle in particular; boil it up, allowing to each quart four or six anchovies chopped small, and a large table-spoonful of eschalots, also chopped. Let it stand a few days, till it is quite clear, then pour off and bottle. It is an excellent store sauce for hash, fish, and various other purposes.

**2335. BEET-ROOTS.**—Boil or bake gently until they are nearly done; according to the size of the root they will require from an hour and a half to two hours; drain them, and when they begin to cool peel and cut in slices half an inch thick, then put them into a pickle composed of black pepper and allspice, of each one ounce, ginger pounded, horseradish sliced, and salt, of each half an ounce to every quart of vinegar, steeped. Two capsicums may be added to a quart, or one drachm of cayenne.

**2336. ARTICHOKE.**—Gather young artichokes as soon as formed; throw them into boiling brine, and let them boil two minutes; drain them; when cold and dry put them in jars, and cover with vinegar, prepared as method the third, but the only spices employed should be ginger, mace, and nutmeg.

**2337. ARTICHOKE BOTTOMS.**—Get full-grown artichokes and boil them, but not so much as for eating, but just until the leaves can be pulled; remove them and the choke; in taking off the stalk, be careful not to break it off so as to bring away any of the bottom; it would be better to pare them with a silver knife, and leave half an inch of tender stalk coming to a point; when cold, add vinegar and spice, the same as for artichokes.

**2338. MUSHROOMS.**—Choose small white mushrooms; they should be but one night's growth. Cut off the root and rub the mushrooms clean with a bit

of flannel and salt; put them in a jar, allowing to every quart of mushrooms one ounce each of salt and ginger, half an ounce of whole pepper, eight blades of mace, a bay leaf, a strip of lemon rind, and a wine-glassful of sherry; cover the jar close, and let it stand on the hob or on a stove, so as to be thoroughly heated, and on the point of boiling; so let it remain a day or two, till the liquor is absorbed by the mushrooms and spices; then cover them with hot vinegar, close them again, and stand till it just comes to a boil; then take them away from the fire. When they are quite cold divide the mushrooms and spice into wide-mouthed bottles, fill them up with the vinegar, and tie them over. In a week's time, if the vinegar has shrunk so as not entirely to cover the mushrooms, add cold vinegar. At the top of each bottle put a tea-spoonful of salad or almond oil; cork close, and dip in bottle resin. (See 2150, 2151.)

2339. **SAMPHIRE**.—On the sea-coast this is merely preserved in water, or equal parts of sea-water and vinegar; but as it is sometimes sent fresh as a present to inland parts, the best way of managing it under such circumstances is to steep it two days in brine, then drain and put it in a stone jar covered with vinegar, and having a lid, over which put thick paste of flour and water, and set it in a very cool oven all night, or in a warmer oven till it nearly, but not quite boils. Then let it stand on a warm hob for half an hour, and let it become quite cold before the paste is removed; then add cold vinegar, if any more is required, and secure as other pickles.

2340. **INDIAN PICKLE**.—The vegetables to be employed for this favourite pickle are small hard knots of white cabbage sliced, cauliflowers or brocoli in flakes, long carrots, not larger than a finger, or large carrots sliced (the former are far preferable), gherkins, French beans, small bottom onions, white turnip radishes half grown, radish-pods, eschalots, young hard

apples, green peaches when the trees are thinned before the stones begin to form, vegetable marrow not larger than a hen's egg, small green melons, calery, shoots of green elder, horseradish, nasturtiums, capsicums, and garlic. As all these vegetables do not come in season together, the best method of doing this is to prepare a large jar of pickle at such time of the year as most of the things may be obtained, and add the others as they come in season. Thus the pickle will be nearly a year in making, and ought to stand another year before using, when, if properly managed, it will be excellent, but will keep and continue to improve for years. For preparing the several vegetables, the same directions may be observed as for pickling them separately, only take this general rule—that, if possible, boiling is to be avoided, and soaking in brine to be preferred; be very particular that every ingredient is perfectly dry before putting into the jar, and that the jar is very closely tied down every time that it is opened for the addition of fresh vegetables. Neither mushrooms, walnuts, nor red cabbage are to be admitted. For the pickle. To a gallon of the best white wine vinegar add salt three ounces, flour of mustard half a pound, turmeric two ounces, white ginger sliced three ounces, cloves one ounce, mace, black pepper, long pepper, white pepper, half an ounce each, cayenne two drachms, eschalots peeled four ounces, garlic peeled two ounces; steep the spice in vinegar on the hob or trivet for two or three days. The mustard and turmeric must be rubbed smooth with a little cold vinegar, and stirred into the rest when as near boiling as possible. Such vegetables as are ready may be put in; when cayenne, nasturtiums, or any other vegetables mentioned in the first method of pickling come in season, put them in the pickle as they are; any in the second method, a small quantity of hot vinegar without spice; when cold pour it off, and put the vegetables into the general jar. If the vegetables are

greened in vinegar, as French beans and gherkins, this will not be so necessary, but will be an improvement to all. Onions had better not be wet at all; but if it be desired not to have the full flavour, both onions, eschalots, and garlic, may be sprinkled with salt in a colander, to draw off all the strong juice; let them lie two or three hours. The elder apples, peaches, and so forth, to be greened as gherkins.

2341. **THE ROOTS, radishes, carrots, celery** are only soaked in brine and dried. Half a pint of salad oil, or of mustard oil, is sometimes added. It should be rubbed with the flour of mustard and tumeric.—It is not essential to Indian pickle to have every variety of vegetable here mentioned; but all these are admissible, and the greater variety the more it is approved.

2342. **BLACKBIRDS.**—The cock-bird is of a deep black, with a yellow bill. The female is dark brown. It is difficult to distinguish male from female birds when young; but the darkest generally are males. Their food consists of German paste (817), bread, meat, and bits of apple. The same treatment as given for the thrush applies to the blackbird. (See 823.)

2343. **SKYLARKS.**—The cock is recognised by the largeness of his eye, the length of his claws, the mode of erecting his crest, and by marks of white in the tail. It is also a larger bird than the hen.

The cage should be of the following proportions:—Length, one foot five inches; width, nine inches; height, one foot three inches. There should be a circular projection in front to admit of a fresh turf being placed every two or three days, and the bottom of the cage should be plentifully and constantly sprinkled with river sand. All vessels containing food should be placed outside, and the top of the cage should be arched and padded, so that the bird may not injure itself by jumping about.

Their food, in a natural state, consists of seeds, insects, and also buds,

green herbage, as clover, endive, lettuce, &c., and occasionally berries.

When confined, they are usually fed with a paste made in the following manner:—Take a portion of bread, well-baked and stale, put it into fresh water, and leave it until quite soaked through, then squeeze out the water and pour boiled milk over it, adding two-thirds of the same quantity of barley-meal well sifted, or, what is better, wheat meal. This should be made fresh every two days. Occasionally the yolk of a hard-boiled egg should be crumbled small and given to the birds, as well as a little hempseed, meal-worms, and elderberries. Great cleanliness should be observed in the cages of these birds.

2344. **CORNS.**—The cause of corns is simply friction, and to lessen the friction you have only to use your toe as you do a coach-wheel—lubricate it with some oily substance. The best and cleanest thing to use is a little sweet oil, rubbed on the affected part (after the corn is carefully pared) with the tip of the finger, which should be done on getting up in the morning and just before stepping into bed at night. In a few days the pain will diminish, and in a few days more it will cease, when the nightly application may be discontinued.

#### 2345. DIRECTIONS FOR ADDRESSING PERSONS OF RANK.—

##### 2346. **THE ROYAL FAMILY.**

*The Queen.*—Madam; Most Gracious Sovereign; May it please your Majesty. To the Queen's Most Excellent Majesty.

*The King.*—Sir, or Sir; Most Gracious Sovereign; May it please your Majesty.

To the King's Most Excellent Majesty.

*The Sons and Daughters, Brothers and Sisters of Sovereigns.*—Sir, or Madame; May it please your Royal Highness.

To his Royal Highness the Prince of Wales.

To her Royal Highness the Duchess of Gloucester.

2347. *Other Branches of the Royal Family.*—Sir, or Madam, May it please your Highness.

To his Highness the Duke of Cambridge; or, To her Highness Princess Sophia of Gloucester.

#### 2348. THE NOBILITY.

*A Duke or Duchess.*—My Lord, or My Lady, May it please your Grace.

To his Grace the Duke of —; or, To her Grace the Duchess of —.

*A Marquis or Marchioness.*—My Lord, or My Lady, May it please your Lordship, or May it please your Ladyship.

To the Most Noble the Marquis (or Marchioness) of —.

*An Earl or Countess*—the same.

To the Right Honourable the Earl (or Countess) of —.

*A Viscount or Viscountess.*—My Lord, or My Lady, May it please your Lordship; or, May it please your Ladyship.

To the Right Honourable Viscount (or Viscountess) —.

*A Baron or Baroness*—the same.

To the Right Honourable the Baron (or Baroness) —.

The widow of a Nobleman is addressed in the same style, with the introduction of the word *Dowager* in the superscription.

To the Right Honourable the Dowager Countess —.

The Sons of Dukes and Marquises, and the eldest Sons of Earls, have, by courtesy, the titles of Lord and Right Honourable; and all the Daughters have those of Lady and Right Honourable.

The younger Sons of Earls, and the Sons and Daughters of Viscounts and Barons are styled Honourable.

#### 2349. OFFICIAL MEMBERS OF THE STATE.

*A Member of Her Majesty's Most Honourable Privy Council.*—Sir, or My Lord, Right Honourable Sir, or My Lord; as the case may require.

To the Right Honourable —, Her Majesty's Principal Secretary of State for Foreign Affairs.

#### 2350. AMBASSADORS AND GOVERNORS UNDER HER MAJESTY.

Sir, or My Lord, as the case may be; May it please your Excellency.

To his Excellency the American (or Russian) or other Ambassador.

To his Excellency Marquis —, Lieutenant General, and General Governor of that part of the United Kingdom called Ireland.

#### 2351. JUDGES.

My Lord, May it please your Lordship.

To the Right Honourable Sir Charles Abbott, Lord Chief Justice of England.

*The Lord Mayor of London, York, or Dublin, and the Lord Provost of Edinburgh, during office*—the same.

My Lord, May it please your Lordship.

To the Right Honourable —, Lord Mayor of London. To the Right Honourable Sir —, Lord Provost of Edinburgh.

The Lord Provost of every other town in Scotland is styled Honourable.

The Mayors of all Corporations (excepting the preceding Lord Mayors), and the Sheriffs, Aldermen, and Recorder of London, are addressed Right Worshipful; and the Aldermen and Recorders of other Corporations, and the Justices of the Peace, Worshipful.

#### 2352. THE PARLIAMENT.

*House of Peers.*—1. My Lords, may it please your Lordships. 2. To the Right Honourable the Lords Spiritual and Temporal, in Parliament assembled.

*House of Commons.*—May it please your Honourable House. To the Honourable the Commons of the United Kingdom of Great Britain and Ireland.

*The Speaker of ditto.*—Sir, or Mr. Speaker. To the Right Honourable —, Speaker of the House of Commons.

A Member of the House of Commons not ennobled.—Sir.

To —, Esq., M.P.

#### 2353. THE CLERGY.

*An Archbishop.*—My Lord, May it please your Grace.

To his Grace the Archbishop of Canterbury; or, To the Most Reverend Father in God, —, Lord Archbishop of Canterbury.

A Bishop.—My Lord, May it please your Lordship. To the Right Reverend Father in God, —, Lord Bishop of Oxford.

A Dean.—My Lord, May it please your Lordship.

To the Rev. Dr. —, Dean of Carlisle.

Archdeacons and Chancellors are addressed in the same manner.

The rest of the Clergy.—Sir, Reverend Sir.

To the Rev. Dr. —, Glasgow.

To the Rev. —, — street, London; or, To the Rev. Mr. —, &c.

2354. LAWS OF CHESS. — The rules given below are based upon the code published in "*Walker's Art of Chess Play*." The word *piece* frequently includes the *pawn*.

2355. I. If the board or pieces be improperly placed, or are deficient in number (except in the case of odds), the game must be recommenced, if the error is discovered before the fourth move on each side (the eighth move of the game). If not discovered before this stage, the game must proceed.

2356. II. If a player gives odds, and yet omits to remove the odds from the board at the commencement, he may recommence the game, and remove the odds given, provided he discover his error before playing his fourth move. But if he has made his fourth move, the game must be played out; and should the player who agreed to give the odds win the game, it shall nevertheless be considered drawn.

2357. III. When parties play even, they draw lots for the first move of the first game. The first move is afterwards taken alternately throughout the sitting, except when a game is drawn, when he who had the first move in that game still claims it, a drawn game being of no account. He who gains the move has also the choice of colour. Each player uses the same colour

throughout the sitting. When a match is made for a given number of games, the move passes alternately throughout the match. A player giving odds has the choice of men, and takes the move in every game, unless agreed to the contrary.

2358. IV. A player who gives the odds of a piece, may give it each game from the king's or queen's side, at his option. If he gives the odds of a pawn, he must give the king's bishop's pawn, unless otherwise stipulated. The player who receives the odds of a certain number of moves at the commencement, must not with those moves cross from his own half of the board.

2359. V. If a player, in his turn to play, touch one of his men, he must move that piece, if it can legally move, unless, when he first touches it, he says aloud, *j'adoube*. No penalty is attached to touching a piece, unless it is your turn to move.

2360. VI. If the player touch his king, with the intention of moving him, and they find that he cannot do so without placing the king in check, no penalty can be inflicted on his replacing his king and moving elsewhere. [Otherwise?] If the player should touch a man which cannot be moved without placing his king in check, he must move his king instead.

2361. VII. If a player about to move touch one of his adversary's men, without saying *j'adoube* when he first touches it, he must take that piece, if it can be lawfully taken. Should it not be taken, he must, as a penalty, move his king; but should the king be unable to play without going into check, no penalty can be enforced. It is not allowed to castle upon a compulsory move of the king.

2362. VIII. While you hold your piece you may move it anywhere allowed by the rules; but when you quit your hold the move is completed, and must be abided by.

2363. IX. If you inadvertently move one of your adversary's pieces instead of your own, he may compel you to

take the piece you have touched, should it be *en prise*; or to re-place it and move your king, or to leave it on the square to which you have moved it, and forego any other move at that time. Should you capture one of the adverse pieces with another, instead of one of your own, the capture holds good, if your opponent so decides.

2364. X. If the player takes a piece through a false move, his adversary may compel him to take such piece with one that can lawfully take it, or to move the piece that has been touched, if such move does not expose the king to check, or he may be directed to move his king.

2365. XI. If you take one of your own men, instead of one of your adversary's, you may be compelled to move one of the two pieces touched, at the option of your opponent. Mr. Walker thinks that the penalty should be to lose the man you have improperly taken off.

2366. XII. An opponent has the option of punishing a false move, by claiming the false move as your move, by compelling you to move the piece touched, as you may think fit, or to replace the piece and move your king.

2367. XIII. The king must never be exposed to check by any penalty enforced.

2368. XIV. If you move twice running, you may be compelled to abide by both moves, or to retract the second.

2369. XV. Unlimited time is allowed for the moves [unless otherwise agreed.] If one player insists upon the postponement of the termination of a game, against the will of his opponent, the game is forfeited by him who will not play on.

2370. XVI. When a pawn is moved two squares, it is liable to be taken, *en passant*, by a pawn, but not by a piece.

2371. XVII. If you touch both king and rook, intending to castle, you must move one of the two pieces, at the option of your adversary; or he may compel you to complete the castling.

You cannot take a piece and castle at the same time; nor does the rook check as it passes to its new position; but it may check on its position after castling.

2372. XVIII. False castling is liable to the same penalties as a false move.

2373. XIX. When a player gives the odds of a rook, he does not relinquish the right of eastling on the side from which the rook has been taken, all other conditions being lawful, as if the rook were in its place.

2374. XX. When you give check you must say so aloud. If check is not called on either side, but subsequently discovered, you must endeavour to recall all the moves back to the period when the check first occurred.

2375. XXI. You are not compelled to cry check when you attack the queen.

2376. XXII. If you cry check, and afterwards alter your determination, you are not compelled to abide by the intention, provided you have not touched the piece.

2377. XXIII. When a pawn reaches the opposite side of the board it may be replaced by any piece, at the option of the owner, and irrespective of the pieces already owned by him.

2378. XXIV. Stall-mate is a drawn game.

2379. XXV. Drawn games count for nothing; and he who moved first in the drawn game moves first in the following.

2380. XXVI. If you declare to win a game, or position, and only draw it, you are accounted the loser.

2381. XXVII. When you have either of the following advantages of force, you are compelled to give check-mate in fifty moves, or the game is considered drawn.

King and queen against king.

King and rook against king.

King and two bishops against king.

King, bishop, and knight, against king.

King and queen against king and rook.

King and rook against king and minor piece.

King and pawn against king.

King and two pawns against king and pawn.

2382. XXVIII. If you move after your adversary has made a false move, or committed other irregularity, you cannot claim the penalties.

2383. XXIX. Spectators are forbidden to make remarks.

2384. XXX. Disputes to be referred to a third party.

2385. HINTS UPON MONEY MATTERS.—Have a supply of change in hand—shillings, sixpences, half-pence. This will obviate the various inconveniences of keeping people at the door, sending out at unreasonable times, and running or calling after any inmate in the house, supposed to be better provided with “the needful.” The tradespeople with whom you regularly deal will always give you extra change, *when* you are making purchases or paying bills; while those to whom you apply for it, on a sudden emergency, may neither be willing nor able to do so. Some housekeepers object to this arrangement, that, “as soon as five-pound notes or sovereigns are changed, they always seem to go, without their understanding how;” but to such persons I would humbly intimate, that this is rather the fault of their *not getting understanding*, than any inevitable consequence of *getting change*. The fact is, that it is the necessity of parting with your money which obliges you to get the larger pieces changed, and not the circumstance of having smaller coin that *necessitates* your parting with your money, though it certainly facilitates your doing so, when the necessity arrives. However, as it is easier to count a few sovereigns than many shillings, and loose money is most objectionable, it is well to put up reserve change in small collective packets, and to replenish the housekeeping purse from these daily or weekly, as may be most convenient.

2386. If money for daily expenses

has to pass through the hands of a common domestic, it is a time and trouble-saving plan to settle with her *every* night, and to make up her cash in hand to a certain *similar* sum. This will prevent such puzzling calculations as the following:—“Let me see: I gave you 10s. on Saturday, and 9d. the day before. Was it 9d.? No, it must have been 11d., for I gave you 1s., and you gave me 1d. out for the beggar; then there was 5s. 6d. on Monday, and 8d. you owed me from last money; and then the 1s. 6d. your master gave you for a parcel, you brought him 2d. back, and 3½d. out of the butcher’s bill; no—you had to give 3½d. to the butcher, but you came to me for the ½d., and I had no coppers, so we still owe him the ½d.; by the way, don’t forget to pay him the next time you go. Then there’s the baker—no—I paid the baker myself, and I *think* the housemaid paid the buttermilk; but you got in the cheese the day before, and I have a sort of recollection that I may possibly owe you for *that*, all but a few pence you must have had left of mine, that I told you to take from off the chimney-piece. Well, cook, I think that’s *nearly* all! Now how do your accounts stand?” This, the poor cook, who is a cook, and *not* a conjuror, finds it no easy matter to discover; all that she is quite certain of is, that her disbursements have somewhat exceeded her receipts, and being an honest woman, though a poor one, she wishes to cheat neither her mistress nor herself; but what with her memory and her want of it, her involved payments, and different receipts; what she owed her mistress, and what her mistress owes her; what she got from her master, and what was partly settled by the housemaid; the balance from the butcher’s bill, and the intricacies of the cheese account, the poor woman is perfectly bewildered. She counts again and again; recapitulates her mistress’s data and her own; sums upwards, backwards, and forwards, and endeavours to explain the differ-

ences between them; then if she can read and write, she brings her slate to "explain the explanation," and the united calculations of maid and mistress, which are after all entirely unavailing to produce a correct account, probably consume more time, and are expressed in more words than would suffice to fill another volume like the present. Two minutes' daily reckoning from a regular sum in hand, would do the business effectually, and prevent either party from being out of pocket or out of temper. Thus, for instance, the maid has her usual sum of five shillings to account for; she pays during the day, for

	s.	d.
Bread . . . . .	1	9
Beer . . . . .	0	6
Vegetables and fruit . . . . .	0	10
Milk . . . . .	0	4
Matches . . . . .	0	1
Parcel . . . . .	1	0
Total . . . . .	4	6

This is easily reckoned, even by the unlearned; the mistress enters the items in her day-book, takes the remaining sixpence, and again gives her servant 5s., in convenient change, to be as readily accounted for on the succeeding day."—*Home Truths for Home Peace; or, "Muddle Defeated."*

2387. ADULTERATIONS.—Much has been written upon the subject of adulteration. Somebody (whose name we forget) took up the subject prior to Dr. Hassall; Dr. Hassall wrote a series of papers in the *Lancet*; these brought about a parliamentary inquiry; the inquiry ended in demonstrating that nearly everything we eat and drink is adulterated—in many cases with ingredients very prejudicial to human health. Somebody has written a little book to inform people "How to detect adulterations in our daily food and drink," and there is room for some one to write a key to the said little book, entitled "How to understand the instructions 'How to Detect Adulteration in our Daily Food and Drink'"—for, although the advertisement of the

book says that it gives instructions for the employment of "simple means" of detection, the means suggested are in most cases highly impracticable, and in some instances dangerous. Thus the housewife, who sets about the discovery of some supposed evil, may, by an error or accident—the upsetting of a bottle of sulphuric acid, or the explosion of a receiver of gas—do herself more injury in an hour than she would suffer from adulteration in a life-time.

2388. IMPRACTICABLE MODES OF DETECTION.—The writer alluded to states that, to discover the adulterations in arrowroot, you are to "mix it with twice its weight of concentrated muriatic acid." To discover adulterations in flour, you are to "take of the suspected flour about 350 grains, and the same quantity of fine sand, and two and a-half fluid ounces of water; triturate in a mortar the sand and flour for five minutes, then gradually add a little of the water, so as to dilute it evenly, and form a homogeneous paste; throw the whole upon a filter, and take about one ounce of the clear liquid, place it in a test-glass, and add the same quantity of an aqueous solution of iodine." The author remarks, that this method is tedious, and far from satisfactory. So we think. He then gives another:—"If chalk be suspected, place a tea-spoonful of flour in a wine-glass, with a little water, and add a few drops of muriatic acid. If chalk be present, a brisk effervescence will ensue, owing to the escape of carbonic acid [it should be—carbonic acid gas.] Lime may be detected in a similar way—using oxalate of ammonia, instead of muriatic acid. The lime will form an insoluble precipitate, which is oxalate of lime!" Then, to detect the presence of bone-dust, you are told to burn a portion of the suspected flour, and "if a portion of the ash dissolved in water give, with nitrate of silver, an abundant precipitate, phosphate of lime is present. The test of oxalate of ammonia may be used to detect lime in the ash, as already advised for its detection in

flour!" This is the character of by far the greater number of these "simple" instructions; and, to crown the whole, to enable you to detect adulteration in bottled, cured, and potted anchovies, with their heads decapitated, and their entrails removed, you are favoured with Mr. Yarrell's pen-and-ink portrait of the fish when in a living, or, at least, a fresh and whole condition! Among other adulterations we therefore discover the adulteration of books, by the introduction of matter to give an appearance of learning to their pages, and of no possible use to the buyer, who is compelled to pay sixpence for what he ought to obtain at one-sixth that cost.

2369. **DIFFICULTY OF DETECTING ADULTERATIONS.**—It is obvious, that if adulterations could be easily discovered, tradespeople who resorted to them would soon suffer from discredit. Many of the adulterations defy even the power of the chemist, and Dr. Hassall's investigations are exceedingly imperfect, being chiefly confined to the agency of the microscope, and passing over a large catalogue of liquid and oleaginous compounds. For many adulterations, the retail dealer is not responsible. Do all he may, he cannot obtain a pure article, since it undergoes adulteration in every stage of its progress to the market, and many substances partake of compound adulteration. Thus Cayenne pepper may be adulterated with mustard, which has previously been adulterated with a cheaper farina, and the whole be coloured with vermilion, cochineal, or red-lead, either or all of which may previously have been adulterated with some inferior substance.

2390. **HOW TO ESCAPE ADULTERATIONS, AND ALSO TO DETECT FRAUDULENT TRADESPEOPLE**—We are not about to advise the housewife to set up a chemical laboratory, nor to put her husband to the expense of a compound achromatic microscope. Our instructions will neither burn holes in her dress, stain her mahogany table, blacken

her nails, make smarting chaps in her hands, nor fill her with monomaniacal fears that she is being ossified by bone-dust, or that in a little while she will be crystallised all over like an alum-basket. Our apparatus is as follows:—

A hand-flour-mill, which	
will cost about . . .	£5 0 0
A pestle and mortar . . .	0 10 0
A coffee-mill . . .	0 8 0
A pepper and spice-mill . . .	0 8 0
Meat-cutting-machine . . .	1 10 0
Scales and weights . . .	0 15 0
Imperial measures . . .	0 5 0

£8 6 0

This seems a good deal of money, and anything but a "simple" means of meeting a great evil. But we have not yet completed our instructions.

2391. **FORMATION OF FAMILY CIRCLES.**—The mill is the most expensive item in this table of expenditure—and what we propose is this:—"Family Circles" (see §40) should be called, for the purpose of mitigating the evils complained of. Let every "Circle" have its mill—let it be kept at a place convenient to all. By such means, a capital of 10s., subscribed by each member, would be sufficient; a little company would be formed, upon a better principle than that of "limited liability," since, the capital being paid up, there would be no liability at all! What would be the result? Why, that people would obtain pure bread, pure coffee, pure condiments, and other things, at a cost of full twenty-five per cent. under that which they now pay for spurious and health-destroying mixtures.

2392. **OTHER EVILS BESIDES "ADULTERATIONS."**—The butcher cannot adulterate the beef and the mutton (see 1), but he can send home short weight; and in casting up a bill, he can reckon the odd ounces at one penny each, instead of one halfpenny; and the baker, besides putting alum in the bread, to make it white and retain water, can send home deficient weight; the same

with the grocer, the greengrocer, and the coal-merchant; the publican can give short measure, and froth up the porter to fill the jug, and disguise the shortness of quantity; and the draper can slip his scissors the wrong side of his finger, and make a yard contain only thirty-three inches. We don't mean to say that they *do* this, nor do we mean to say that they *don't*. We argue, *that people ought to possess the means of ascertaining who among shopkeepers are honest, and who are not.* Then the just would meet with justice, and the unjust would suffer for their own sins. If we can succeed in inducing people to put these simple suggestions into operation, we shall have done more to remedy the evil than Dr. Hassall and the Parliament. For these have merely exposed the defect, frightened everybody, and produced no practical result.

2393. ADULTERATIONS, AND REALLY SIMPLE MODES OF DETECTING THEM.—ARROWROOT is adulterated with potato starch, sago, and tapioca-starch. There is nothing injurious in these adulterations. When largely adulterated with potato-starch, the arrowroot, being passed through the hand, imparts a slippery and glaze-like feeling. Pure arrowroot may generally be obtained by paying the best prices. The arrowroot packed in tin cases, and puffed as pure, may generally be regarded as highly adulterated.

2394. ANATTO is adulterated with chalk, wheat-flour, gye-flour, salt, and soap; and is coloured with Venetian red and red lead. It is difficult to detect these adulterations.

2395. A STANHOPE LENS, which may be obtained for from 2s. 6d. to 5s., or one of the glass water bulbs that are sold by men in the London streets at one penny each, will be of material assistance in detecting the admixture of impure substances with articles of food. Even a common phial filled with water possesses a high magnifying power.

2396. BRANDY is adulterated with

cayenne pepper, water, and burnt sugar. Betts's brandy is the best.

2397. BREAD. — Grind your own wheat, make your own yeast, and bake your own bread (See 113, 537, 2077, 2160, 2183). The advantages will be immense, and you need not then trouble about adulterations.

2398. *The Adulterations of Bread, &c.* — Bread and flour are adulterated with flour of inferior grain, Indian corn flour, potato flour, pea and bean flour, bone-dust, &c. None of these are positively injurious. But they are also adulterated with plaster of Paris, chalk, alum, &c., and these are highly prejudicial to health, especially when taken continuously. (See 586.)

2399. *To Discover whether Bread be Adulterated with Alum.*—Run into a loaf that is one day old a knife made very hot; if there be alum present, it will adhere in very small particles to the blade of the knife, and will indicate its presence by a peculiar smell. If bread looks unnaturally white, and if it gives off a good deal of water, and becomes very brittle and dry when toasted, alum may be regarded as being present.

2400. *To Discover whether Bread be Adulterated with Pea or Bean Flour.*—Pour boiling water upon it, and if the flour is mixed with the farina of peas or beans, the strong smell of those grains will become manifest.

2401. *To Discover whether Flour be Adulterated with Chalk, Plaster of Paris, or Mineral Powders.*—If containing these admixtures, it will be found to be heavier, measure for measure, than pure flour. That is to say, a pint of pure flour would be overbalanced in the scales by a pint of adulterated flour. Slice the soft part of a loaf, and put it into a large quantity of water, in an earthen vessel. Place it over a slow fire for three hours. Scoop up the pap, and let the water stand. When perfectly settled, pour off the water, and a chalky sediment will be found to cover the bottom of the vessel. Heartburn, after eating impure

bread, is a sign of its impurity. Put some flour upon a table, and blow it gently with the breath. If little heaps remain upon the table, resisting the action of the breath, and differing manifestly from the indications given by other portions when blown upon, the substance thus remaining is impure. Potato flour, and indeed all white flours, are heavier than pure wheat. Bake a small quantity of the suspected flour, until it is of a full brown. Then take it, and rub in your hands, or on a table, and white particles will be seen, if chalk or plaster of Paris be present.

2402. *Pure Wheat Flour* is remarkable for its cohesiveness. If squeezed, it will adhere; it is also very light, and may be blown into a cloud with the lightest breath. It was stated by the Parliamentary Report, that earthy matters are not admixed with flour. This means, that Dr. Hassall had not discovered any. A man was fined at Leeds, not long ago, for adulterating flour with plaster of Paris. He had carried adulteration to such an excess, that it was discovered through the illness of families who had partaken of bread made from flour supplied by him.

2403. BUTTER is made heavy by water, which may generally be seen exuding from bad samples, which should be rejected by the purchaser.

2404. CAYENNE PEPPER. — Having your own pestle and mortar, make it according to the instructions given (2165), which are excellent. Let a quantity be made at one time for the "Family Circle." The cayenne of commerce is adulterated with brick-dust, red wood dust, cochineal, vermilion, and red-lead. The latter two are highly injurious, and the former ones not very salutary. As to the means of detecting these, it would be a great waste of time to find them out, since all cayenne is largely adulterated. Therefore, make your own, or—don't use any.

2405. CHICORY. — This is the dried and roasted root of a plant allied to the dandelion, and it is found by almost

unanimous testimony to be an agreeable flavourer of coffee. Dr. Hassall denounces the use of chicory, but with no sufficient reason. He states it to be "diuretic and aperient" — qualities which we declare to be in its favour, for it is the prevailing defect of our food that it is too astringent and heating, and the fact that chicory finds such general approbation we believe rests in the very qualities which Dr. Hassall condemns. We know a respectable grocer who, before legislation took the matter up, from conscientious motives, ceased to mix chicory with coffee: the immediate effect was the falling off of his coffee trade, his customers declaring that his coffee was not so good as previously; and he was compelled again to mix chicory with it to meet their taste. Chicory is found to be "adulterated" with carrot, parsnips, and mangold-wurzel. In Dr. Hassall's papers the names of those roots are *italicised*, as though some dreadful disclosure lay therein. But as these roots are all of them highly nutritious and agreeable, instead of detracting from the claims of chicory, the facts stated rather elevate "chicory" in our estimation, and point to the probability that the roots mentioned possess qualities hitherto imperfectly ascertained, and worthy of further examination and development. Our remarks are not merely of conjecture, they are founded upon observation and analysis.

2406. CHOCOLATE AND COCOA. — The adulterations of these articles pointed out by Dr. Hassall are not of a serious nature, being confined to *flour, starch, potato-farina, sago-meal, wheat-flour, tapioca-starch, Maranta*, and other arrowroots, *tous les mois*, and *animal fats*; but as the latter are employed in the roasting of all farinaceous grains, to prevent the burning thereof, and also to preserve as far as possible their essential oils from destruction by heat, we see nothing to make our readers uncomfortable. Those who prefer the pure cocoa can obtain the "nibs," or more properly "beans," and grind them.

But many prefer the soluble cocoa, which is simply cocoa modified by admixture with less stimulating substances.

**2407. COFFEE.**—Coffee is adulterated with chicory, roasted beans, peas, and acorns; but chiefly by chicory. Having your own mill, buy the roasted beans; find out a respectable grocer, ascertain his roasting days, and *always buy from a fresh roast*. If you like the flavour of chicory, purchase it separate, and add to taste. Chicory, in small quantities, is not, as has been represented, injurious, but healthful: because the "*taranaxum*" root has been used medicinally, and its name has found a place in *Pharmacopœias*, it has been vulgarly set down as "*physic*," and thrown to the dogs. The tonic hop might be discarded upon the same pretext. Chicory is a healthful addition to coffee, but you need not pay the coffee price for it. Grind your coffee, and mix with chicory for yourself.

**2408. CONFECTIONS AND SWEETMEATS** are coloured with poisonous ingredients. Avoid them—there is not the slightest necessity for running any risk.

**2409. CURRY-POWDERS** are but an accumulation of adulterations:—adulterated pepper, adulterated coriander, adulterated cardamoms, adulterated ginger, adulterated spices, and so on. *With your spice mill and grater prepare your own from the seeds and roots*. You will thereby obtain such a curry-powder, and be able to produce such a curry, as will spread your reputation far and wide. (See 168, 234, 2167, 2168.)

**2410. CUSTARD AND EGG-POWDERS** contain wheat, potato, and rice-flours, and are coloured with chrome yellow, orchromate of lead and turmeric. They are not essential articles of household economy.

**2411. GIN** is adulterated with water, sugar, cayenne, Cassia, cinnamon, grains of paradise, sulphuric acid, coriander-seeds, angelica root, calken root, almond cake, orris root, cardamom seeds, orange peel, and grey and white salts,

and is "*finéd*" by alum and salt of tartar. The best way is to purchase the unweetened gin, for the sweetening is employed to disguise the flavour of various adulterations. If you examine gin through a clean glass, it should have no tint, either of a bluish or yellowish cast. The cheap gins should be avoided, and only the respectable dealers should be resorted to.

**2412. ISINGLASS.**—Our chief object in noticing the adulteration of this article is to ensure its purity in the making of cements, which is of the utmost importance. (See 78.) Isinglass is a preparation from fishes' bladders, and it is found to be adulterated with gelatine. Take a few threads of the substance, drop some into boiling water, some into cold water, and some into vinegar. In the boiling water the isinglass will dissolve; in cold water it will become white and "*cloudy*;" and in vinegar it will swell and become jelly-like. In boiling water gelatine will not so completely dissolve as isinglass; in cold water it becomes clear and jelly-like; and in vinegar it will harden.

**2413. LARD** is adulterated with potato flour, water, salts, carbonate of soda, and caustic lime. Take a small portion of the suspected lard, and evaporate it upon a hot iron pan or plate, when the admixed substances will be deposited thereon.

**2414. MARMALADE** is found to be adulterated with coarse apples, Swede turnips, and coarse pumpkins. These substances may be easily detected by washing off the saccharine matter in tepid water. Generally speaking, however, it is only the low-priced marmalades that are thus admixed.

**2415. MILK** is adulterated with water, and coloured with anatto.

**2416. MUSTARD AND PEPPER** are both adulterated with inferior grain, husks of seeds, and even dust of a variety of descriptions. Having your pepper mill, purchase the seed whole, and grind for yourself. You will then obtain the pure article at a moderate cost.

**2417. OATMEAL** is adulterated with barley flour and the husks of barley. A pint of pure oatmeal will weigh heavier than a pint of the adulterated.

**2418. PICKLES AND PRESERVES.**—These are found to be adulterated with various compounds; but the greatest evil lies in the fact that they are frequently impregnated with copper. In the case of preserves, the copper probably proceeds from the use of copper pans in making the preserves, but with regard to pickles, copper is employed to improve their colour, and sulphuric acid to strengthen bad vinegar. The best way is to avoid purchasing the pickles sold in clear glass bottles, and presenting a most tempting appearance. Go to Messrs. Crose and Blackwell's, of Soho-square, or to Robert Feast's, of Finsbury-pavement, and buy their household pickles, which they sell about 5s. per gallon. Take your own jar, or jars, and you will find that you will get pure articles at little more than it would cost you to make pickles at home. We presume that in all large towns the pickle merchants adopt the same plan of selling pickles by the quart or gallon to those who may visit their establishments; and also that preserves (for those who do not make their own) may be obtained under equal advantages.

**2419. PORTED MEATS AND FISH** are adulterated with inferior substances, and coloured with bole armenian and Venetian red.

**2420. PORTER AND ALE** are adulterated with cocculus indicus, tobacco, grains of Paradise, capsicum, ginger, quassia, wormwood, calamus root, caraway and coriander-seeds, orange powder, liquorice, honey, sulphate of iron, sulphuric acid, cream of tartar, alum, carbonate of potash, oyster shells, harts-horn shavings, fabia amara, or nuxvomica, and beans for fining. Beer which is quickly "heady," rapidly intoxicating, may be regarded as drugged. The large brewers supply the purest. The publicans adulterate after they receive supplies from the brewers.

**2421. RUM** is adulterated with water,

and sharpened with cayenne pepper. Let it stand in a decanter, and if a cloudy precipitate is found at the bottom, that is a sign of adulteration.

**2422. SAUSAGES.**—The most offensive of all adulterations is found in these savory morsels. Horseflesh, diseased animals, and odds and ends of every description find their way into the tempting guise of "sausages." To escape from this evil, make your own sausages, by the aid of the sausage machine, which may be purchased for 30s., and will enable you to add many savory morsels to the attraction of your table. The same machine may be used for CHOPPING VEGETABLES, which it will do to such perfection that they will perfectly dissolve in soups and stews, and afford most delicious made dishes. And in this, as in the grinding of wheat, you will soon save the cost of the machine.

**2423. SNUFF** is adulterated with the chromates of potash, chromate of lead, various earths and colours, red lead, carbonate of ammonia, lime, powdered glass or silice, and powdered orris root.

**2424. SUGAR** is commonly adulterated with fine sand, sawdust, &c. Dissolve some of the sugar in a long, narrow beer-glass, and stir it until all the soluble parts have been thoroughly dissolved. Then allow it to stand for some hours. Sand will sink to the bottom, while sawdust will rise to the top. Both the sand and the sawdust will be found to be very fine, but their presence will be sufficiently indicated. Loaf sugar is generally purer than soft.

**2425. TEA** is adulterated with leaves of the sycamore, horse chestnut, and plum; with lie tea, which is made up of tea dust, sand, and gum, to give it consistency; also with leaves of the beech, bastard plane, elm, poplar, willow, fancy oak, hawthorn, and sloe. It is coloured with black lead, rose pink, Dutch pink, vegetable red and yellow dyes, arsenite of copper, chromate and bichromate of potash. Green teas are more adulterated than black. They are coloured with Prussian blue, turmeric, Chinese yellow, &c., flavoured

with sulphate of iron, catechu gum, la-  
veno beno, and Chinese botanical pow-  
der. Tea-leaves that have been once  
used are collected, "floated," and  
again sold as fresh tea. Obtain some  
genuine leaves of tea, moisten them,  
and lay them out with gum upon  
paper. Press them between the leaves  
of books until dry. When you sus-  
pect a sample of tea, damp and unroll  
the leaves, and gum and dry them as  
the genuine ones,—you will then be  
able by comparison to detect the ad-  
mixture.

2426. TOBACCO is adulterated with  
rhubarb, potato, coltsfoot, dock-leaves,  
sawdust, malt combsings, and medi-  
cinals. The leaves may be unrolled  
and compared, as recommended in the  
case of tea.

2427. WINES are adulterated with  
the juice of elderberries, gooseberries,  
hop-champagne, cider, the juices of  
various fruits, known as British wines,  
and coloured by means of logwood,  
burnt sugar, and other ingredients.  
There is scarcely a drop of pure wine  
to be obtained; and the best remedy  
for this department of the evil will be  
for the Government to abolish or re-  
duce the duty upon foreign wines, by  
which pure, light, and innoxious be-  
verages will be introduced, and the  
temptation to practise adulteration be  
greatly diminished.

2428. THE RESULT of these inquiries  
proves that a majority of articles sold  
are adulterated. But it is also proved  
that a majority of the substances used  
for adulterations are not positively in-  
jurious, though they are fraudulently  
substituted for the genuine article.

2429. THE following are hints which,  
if followed, will turn these discoveries  
to practical account:—

1. *Grind your own wheat, and make  
your bread at home.*

2. *Avoid green pickles. That is,  
pickles artificially raised to a bright green.*

3. *Avoid bright-red peppers, spices,  
and sauces.*

4. *Purchase spirits and beer of large  
dealers and brewers.*

5. *Avoid coloured confections,—ex-  
pecially those that are green, blue, or red.*

6. *Weigh and measure your pur-  
chases when they are brought home.  
You will thus not only secure your just  
amount, but will arrive at a knowledge  
of the proper weights of pure articles,  
and be assisted in the rejection of the  
spurious.*

2430. PORK, SPARE-RIB. — Joint  
it nicely before roasting, and crack the  
ribs across as lamb. Take care not to  
have the fire too fierce. It should be  
basted with very little butter and flour,  
and may be sprinkled with dried sage,  
fine. Takes from two to three hours.  
Apple sauce, mashed potatoes, and  
greens are the proper accompaniments.  
Good mustard, fresh made.

2431. CUSTARD (BAKED). — Boil  
in a pint of milk a few coriander seeds,  
a little cinnamon and lemon-peel,  
sweeten with four ounces of loaf sugar,  
mix with it a pint of cold milk; beat  
eight eggs for ten minutes; add the  
other ingredients; pour it from one pan  
into another six or eight times, strain  
through a sieve; let it stand; skim the  
froth from the top, fill it in earthen  
cups, and bake immediately in a hot  
oven; give them a good colour; ten  
minutes will do them.

2432. VERMICELLI SOUP. — Take  
in the proportions of three quarts of  
gravy soup, or stock, to six ounces of  
vermicelli. Simmer for half an hour;  
stir frequently.

2433. APPLES for keeping should  
be laid out on a dry floor for three  
weeks. They may then be packed  
away in layers, with dry straw between  
them. Each apple should be rubbed  
with a dry cloth as it is put away. They  
should be kept in a cool place, but  
should be sufficiently covered with  
straw to protect them from frost.  
They should be plucked on a dry  
day.

2434. GINGERBREAD APERIENT.  
—Gingerbread, made with oatmeal  
or with barley flour, is a very agreeable  
aperient for children. Beware of giving  
children medicines too frequently.

## 2435. EVENING PASTIME.—

Among the innocent recreations of the fireside, there are few more commendable and practicable than those afforded by what are severally termed Anagrams, Charades, Conundrums, Enigmas, Puzzles, Rebuses, Riddles, Transpositions, &c. Of these there are such a variety, that they are suited to every capacity; and they present this additional attraction, that ingenuity may be exercised in the invention of them, as well as in their solution. Many persons who have become noted for their literary compositions may date the origin of their success to the time when they attempted the composition of a trifling enigma or charade.

2436. ANAGRAMS are formed by the transpositions of the letters of words or sentences, or names of persons, so as to produce a word, sentence, or verse of pertinent, or of widely different meaning. They are very difficult to discover, but are exceedingly striking when good. The following are some of the most remarkable:—

<i>Transposed</i>	<i>forms—</i>
Astronomers	No more stars.
Catalogues	Got as a clue.
Elegant	Neat leg.
Impatient	Tim in a pot.
Immediately	I met my Della.
Masquerade	Queen as mad.
Matrimony	Into my arm.
Melodrama	Made moral.
Midshipman	Mind his map.
Old England	Golden land.
Parishioners	I hire parsons.
Parliament	Partial men.
Penitentiary	Nay I repent.
Presbyterians	Best in prayer.
Radical Reform	Rare mad folk.
Revolution	To love ruin.
Sir Robert Peel	Terrible power.
Sweetheart	There we eat.
Telegraphs	Great helps.

2437. CONUNDRUMS.—These are simple catches, in which the sense is playfully cheated, and are generally founded upon words capable of double meaning. The following are examples:—

Where did Charles the First's executioner dine, and what did he take?

*He took a chop at the King's Head.*

When is a plant to be dreaded more than a mad dog?

*When it's madder.*

What is Majesty stripped of its externals?

*It is a jest.* [The *m* and the *y*, externals, are taken away.]

Why is not bread like a caterpillar?

*Because it's the grub that makes the butter fly.*

Why did the accession of Victoria throw a greater damp over England than the death of King William?

*Because the King was missed (mist) while the Queen was reigning (raining).*

Why should a gouty man make his will?

*To have his legacies (leg at ease).*

Why are bankrupts more to be pitied than idiots?

*Because bankrupts are broken, while idiots are only cracked.*

Why is the treadmill like a true convert?

*Because its turning is the result of conviction.*

When may a nobleman's property be said to be all feathers?

*When his valets are all entails, (hen-tails).*

2438. THE CHARADE is a poetical or other composition founded upon a word, each syllable of which constitutes a noun, and the whole of which word constitutes another noun of a somewhat different meaning from those supplied by its separate syllables. Words which fully answer these conditions are the best for the purposes of charades; though many other words are employed. In writing, the first syllable is termed "*My first*," the second syllable, "*My second*," and the complete word, "*My whole*." The following is an example of a Poetical Charade:—

The breath of the morning is sweet;

The earth is bespangled with flowers;

And buds in a countless array

Have open'd at the touch of the showers.

The birds whose glad voices are ever

A music delightful to hear,

Seem to welcome the joy of the morning

As the hour of the bridal draws near.

What is that which now steals on my first

Like a sound from the dream-land of love,

And seems wand'ring the valleys among—

That they may the nuptials approve?

'Tis a sound which my second explains,

And it comes from a sacred abode,

And it merrily-tells as the villagers throng

To greet the fair bride on her road.

How meek is her dress, how befitting a bride

So beautiful, spotless, and pure;

When she weareth *my second*, oh, long may it be  
Ere her heart shall a sorrow endure.  
See the glittering gem that shines forth from  
her hair—

'Tis *my whole* which a good father gave,  
'Twas worn by her mother with honour be-  
fore—

But she sleepeth in peace in her grave  
'Twas her earnest request as she bade them  
adieu,

That when her dear daughter the altar  
drew near,

She should wear the same gem that her  
mother had worn

When she as a bride full of promise stood  
there.

2439. The answer is *Earring*. The  
bells *ring*, the sound steals upon the  
*ear*, and the bride wears an *ear-ring*.  
Charades may be sentimental or hu-  
morous, in poetry or prose; they may  
also be *acted*, in which manner they  
afford considerable amusement.

2440. ACTED CHARADES. — A draw-  
ing-room with folded doors is the best  
for the purpose. Various household  
appliances are employed to fit up some-  
thing like a stage, and to supply the  
fitting scene. Characters dressed in  
costumes made up of handkerchiefs,  
coats, shawls, table-covers, &c., come  
on and perform an extempore play,  
founded upon the parts of a word, and  
its *whole*, as indicated above. For in-  
stance, the events explained in the  
poem above might be *acted*—glasses  
might be rung for bells—something  
might be said in the course of the  
dialogues about the sound of the bells  
being delightful to the *ear*; there  
might be a dance of the villagers, in  
which a *ring* might be formed; a wed-  
ding might be performed; and so on.  
Though for *acting* Charades there are  
many better words, because *Earring*  
could with difficulty be *represented*  
without at once betraying the meaning.  
There is a little work entitled "Family  
Pastime," published by Darton and Co.,  
of Holborn-hill, which supplies a large  
number of these charades. But the  
following is the only complete list of  
words upon which Charades may be  
founded ever published:—

# 2441. WORDS which may be con- verted into ACTING OR WRITTEN CHARADES

Aid-less	Cab-in	Fire-ship
Air-pump	Can-did	Fire-work
Ale-house	Can-ton	Fir-kin
Ann-ounce	Care-ful	Fish-hook
Arch-angel	Car-pot	Flag-rant
Arm-let	Car-rot	Flip-pant
Art-less	Cart-ridge	Flood-gate
Ass-ail	Chair-man	Fond-ling
Ba-boon	Chamber-maid	Foot-ball
Back-bite	Cheer-ful	Foot-man
Back-slide	Cheer-less	Foot-pad
Bag-gage	Christ-mas	Foot-step
Bag-pipe	Church-yard	Foot-stool
Bag-dad	Clans-men	For-age
Bail-able	Clerk-ship	For-bear
Bale-ful	Cob-web	For-bid
Band-age	Cock-pit	Fox-glove
Band-box	Cod-ling	Free-hold
Bare-ful	Coin-age	Free-stone
Bar-bed	Con-ant	Fret-work
Bar-gain	Con-fined	Friend-ship
Bar-rack	Con-firm	Frost-bite
Bar-row	Con-form	Fur-long
Bat-ten	Con-test	Gain-say
Beard-less	Con-tract	Gang-way
Bid-den	Con-verse	Glow-worm
Bird-lime	Cork-screw	Glut-ton
Birth-right	Count-less	God-father
Black-guard	Court-ship	God-mother
Blame-less	Crab-bed	God-daughter
Block-head	Cross-bow	God-son
Boat-man	Cur-tail	God-like
Boot-jack	Cut-throat	God-child
Book-worm	Dark-some	Gold-finch
Bound-less	Day-break	Gold-smith
Bow-king	Death-watch	Goose-berry
Brace-let	Dog-ma	Grand-father
Brain-less	Don-key	Grate-ful
Break-fast	Drink-able	Green-finch
Breath-less	Drug-get	Grey-hound
Brick-bat	Duck-ling	Grate-stone
Brick-dust	Ear-ring	Grim-ace
Bride-groom	Earth-quake	Grind-stone
Bride-cake	Ear-wig	Ground-plot
Brim-stone	False-hood	Ground-sel
Broad-cloth	Fan-atic	Guard-ship
Broad-side	Fare-well	Gun-powder
Broad-sword	Far-thing	Had dock
Brow-beat	Fear-less	Hall-stone
Bug-bear	Fee-ling	Hall-storm
Bull-dog	Field-fare	Half-penny
Bump-kin	Fire-lock	Ham-let
Buoy-ant	Fire-man	Ham-mock
But-ton	Fire-pan	Hand-suff

Hang-man	In-mate	Mad-cap	Over-board	Over-value	Pass-time
Hap-pen	In-no-cent	Mad-house	Over-boll	Over-work	Patch-work
Hard-ship	In-sane	Mad-man	Over-burden	Our-selves	Pa-tent
Harts-horn	In-spirits	Mag-pie	Over-cast	Out-act	Path-way
Head-land	In-tent	Main-mast	Over-charge	Out-bid	Pat-ten
Head-long	Inter-meddle	Main-sail	Over-cloud	Out-brave	Peace-able
Head-less	Inter-sect	Main-spring	Over-come	Out-bruise	Pea-cock
Head-stone	Inter-view	Man-moth	Over-court	Out-cast	Fear-led
Head-strong	In-valid	Man-age	Over-due	Out-cry	Peer-age
Hear-say	In-vent	Man-date	Over-do	Out-do	Peer-less
Heart-less	In-vest	Marks-man	Over-eye	Out-grow	Pen-knife
Heart sick	In-ward	Mar-row	Over-feed	Out-law	Pen-man
Heart-string	Ire-ful	Mass-acre	Over-flow	Out-line	Pen-man-ship
Hedge-hog	Iron-mould	Match-less	Over-grown	Out-live	Penny-worth
Heir-less	I-sing-lass	May-game	Over-head	Out-march	Per-jury
Heir-loom	Jaco-bite	Meat-man	Over-hear	Out-rage	Pert-in-a-city
Hell-hound	Joy-ful	Mis-charge	Over-heart	Out-ride	Pick-lock
Hell-kite	Joy-less	Mis-chief	Over-joy	Out-run	Pick-pocket
Hence-forth	Justice-ship	Mis-count	Over-jade	Out-sail	Pie-bald
Hen-roost	Key-stone	Mis-deed	Over-leap	Out-sell	Pike-staff
Herb-age	Kid-nap	Mis-judge	Over-lay	Out-shine	Pill-age
Herds-man	King-craft	Mis-quote	Over-load	Out-side	Pin-cushion
Her-self	King-fisher	Moon-light	Over-look	Out-sleep	Pine-apple
Hide-den	Kins-man	Moon-beam	Over-mast	Out-sit	Pip-kin
High-land	Kit-ten	Muf-fin	Over-match	Out-spread	Pitch-fork
High-way	Knight-hood	Name-sake	Over-right	Out-stare	Pit-men
Hind-most	Know-ledge	Nan-keen	Over-pass	Out-stretch	Plain-tiff
Hoar-frost	Lace-man	Nap-kin	Over-pay	Out-talk	Play-fellow
Hob-goblin	Lady-bird	Neck-lace	Over-peer	Out-vie	Play-game
Hogs-head	Lady-ship	Neck-cloth	Over-plus	Out-ward	Play-house
Home-bred	Lamp-black	Nest-ling	Over-poise	Out-weight	Play-wright
Honey-comb	Land-lady	News-paper	Over-power	Out-wit	Plough-man
Honey-bag	Land-scape	Nick-name	Over-press	Out-work	Plough-share
Honey-moon	Land-lord	Night-cap	Over-rack	Out-worn	Pole-cat
Honey-suckle	Land-mark	Night-gown	Over-rate	Ox-gall	Pol-lute
Hood-wink	Land-tax	Night-mare	Over-reach	Ox-lip	Pop-gun
Horse-back	Lap-dog	Night-watch	Over-ripen	Pack-age	Port-able
Horse-shoe	Lap-pet	Nine-fold	Over-rule	Pack-cloth	Pop-in-jay
Host-age	Laud-able	Noon-tide	Over-roast	Pad-dock	Port-hole
Hot-bed	Law-giver	North-star	Over-run	Pad-lock	Post-age
Hot-house	Law-suit	North-ward	Over-see	Pain-ful	Post-chaise
Hot-spur	Lay-man	Not-able	Over-seer	Pain-less	Post-date
Hounds-ditch	Leap-frog	Not-ice	Over-set	Pal-ace	Post-house
Hour-glass	Leap-year	No-where	Over-shade	Pal-ate	Post-office
House-hold	Lee-ward	Nut-gall	Over-shadow	Pal-let	Post-man
House-maid	Life-guard	Nut-mag	Over-shoe	Pan-cake	Pot-ash
House-wife	Like-wise	Oak-apple	Over-shoot	Pan-tiles	Pot-hook
Hum-drum	Live-long	Oat-cake	Over-sight	Pa-pa	Pound-age
Hump-back	Load-stone	Oat-meal	Over-size	Pa-pal	Prim-rose
Hurri-cane	Log-book	Off-end	Over-sleep	Par-able	Prior-ship
Il-nature	Log-wood	Oil-man	Over-spread	Pa-rent	Prop-a-gate
Il-usage	Loop-hole	O-man	Over-stock	Pa-ring	Punch-bowl
In-action	Lord-ship	On-set	Over-strain	Par-son	Quad-rant
In-born	Love-sick	O-pen	Over-sway	Par-anip	Quench-less
In-crease	Low-land	O-pinion	Over-swell	Par-took	Quick-lime
In-justice	Luck-less	Over-act	Over-take	Part-ridge	Quick-sand
In-king	Luke-warm	Over-awe	Over-throw	Pass-able	Quick-set
In-land	Ma-caw	Over-be-	Over-too-	Pa- -over	Quick-silver

Rain-bow	Seed-ling	Sol-ace	Sup-plant	Toad-stool	Water-course
Ram-pant	Seed-pearl	So-lo	Sup-port	Toll-some	Water-fall
Ran-sack	Seeds-man	So-went	Sup-port-able	Tom-boy	Water-fowl
Rap-a-city	Seed-time	Some-body	Sup-position	Tooth-ache	Water-man
Rasp-berry	Sex-tile	Some-time	Sup-press	Top-knot	Water-mark
Rattle-snake	Sex-ton	Some-how	Swans-down	Top-most	Water-mill
Rare-mouse	Shame-less	Some-what	Sweep-stake	Top-sail	Water-work
Red-breast	Sham-rock	Some-where	Sweet-stake	Touch-stone	Way-lay
Red-den	Shape-less	Song-stress	Sweet-bread	Touch-wood	Way-ward
Rid-dance	Sharp-set	Sou-net	Sweet-briar	Towns-man	Weather-cock
Ring-leader	Sheep-oot	Southern-wood	Sweet-heart	Toy-shop	Weather-glass
Ring-let	Sheep-shearing	Span-king	Sweet-william	Track-lass	Weather-wise
Ring-tail	Sheep-walk	Spare-rib	Sweet-willow	Trap-door	Web-bcd
Ring-worm	Sheet-anchore	Spar-row	Swine-hard	Tre-foll	Web-foot
Rolling-pin	Shell-fish	Speak-able	Sword-man	Trip-thong	Wed-lock
Room-age	Shift-less	Speech-less	Tar-get	Trip-let	Week-day
Rose-water	Ship-board	Spite-ful	Taw-dry	Trod-den	Wel-come
Rot-ten	Ship-wreck	Sports-man	Tax-able	Turn-pike	Well-fare
Round-about	Shirt-less	Spot-less	Tea-cup	Turn-spit	Well-bred
Round-house	Shoe-maker	Spring-halt	Team-ful	Turn-stile	Well-born
Run-a-gate	Shoe-string	Spruce-beer	Teem-less	Tutor-age	Wheel-a-right
Rush-light	Shop-board	Stair-case	Tell-tale	Twelfth-tide	Whore-at
Safe-guard	Shop-keeper	Shop-board	Ten-able	Twelfth-night	Whore-by
Sal-low	Shop-man	Star-gazer	Ten-a-city	Two-fold	Whet-stone
Sand-stone	Short-hand	Star-less	Ten-ant	Two-pence	Whip-cord
Sat-in	Shore-less	Star-light	Ten-dance	Vain-glory	Whip-hand
Sat-ire	Short-lived	Star-like	Ten-dral	Van-guard	Whirl-pool
Saute-box	Short-sighted	Star-ling	Ten-don	Vault-age	Whirl-wind
Sauce-pan	Shot-free	States-man	Ten-or	Up-hill	White-wash
Saw-dust	Shoulder-belt	Stead-fast	Thank-ful	Up-hold	Whit-low
Saw-pit	Shrove-tide	Steel-yard	Thank-less	Up-braid	Whit-sun-tide
Scare-crow	Slide-board	Steer-age	Them-selves	Up-land	Who-ever
Scarf-skin	Side-long	Stop-dame	Thence-farth	Up-right	Whole-sale
Scar-let	Side-saddle	Step-daughter	There-after	Up-roar	Whole-some
School-fellow	Side-ways	Step-father	There-at	Up-shot	Will-low
School-master	Sight-less	Step-mother	There-by	Up-ride	Wild-fire
School-mistress	Silk-weaver	Steward-ship	There-for	Up-start	Wind-lass
Scot-free	Silk-worm	Stiff-neck	There-from	Up-ward	Wind-mill
Screech-owl	Silver-smith	Still born	There-in	Use-less	Wind-jape
Scul-lion	Sin-less	Stock-jobber	There-on	Wag-on	Win-now
Sea-born	Six-fold	Stone-fruit	There-to	Wag-tail	Wise-acre
Sea-calf	Skim-milk	Store-fruit	There-with	Wain-seet	Wit-lass
Sea-coal	Ship-jack	Store-house	Thick-set	Waist-coat	Wolf-dog
Sea-faring	Sky-lark	Stow-age	Thought-ful	Wake-ful	Wood-cock
Sea-girt	Sky-light	Strata-gem	Thought-less	Wal-nut	Wood-land
Sea-gull	Slap-dash	Straw-berry	Thread-bare	Wan-ton	Wood-man
Sea-maid	Sleeve-less	Stream-let	Three-fold	Ward-robe	Wood-note
Sea-man	Slip-board	Strip-ling	Three-score	Ward-ship	Wood-nymph
Seam-less	Slip-shod	Summer-house	Thresh-old	Ward-mote	Work-house
Seam-stress	Slip-slop	Sum-mary	Through-out	Ware-house	Work-man
Sea-nymph	Slope-wise	Summer-set	Thunder-struck	War-fare	Work-shop
Sea-piece	Slow-worm	Sun-bean	Thunder-bolt	War-like	Worm-wood
Sea-port	Snip-snap	Sun-burnt	Till-age	War-rant	Wrath-ful
Sea-sick	Snip-pet	Sun-day	Tin-gent	Wash-ball	Wrath-less
Sea-son	Snow-ball	Sun-dry	Tip-pet	Waste-ful	Wrist-band
Sea-ward	Snow-drop	Sun-flowers	Tip-staff	Watch-ful	Writ-ten
Second-hand	Snuff-box	Sun-less	Tire-some	Watch-man	Year-ling
Seed-cake	Sod-den	Sup-plant	Title-page	Watch-word	Youth-ful

2442. ENIGMAS are compositions of a different character, based upon *ideas* rather than upon words; and frequently constructed so as to mislead, and to surprise when the solution is made known. Enigmas may be founded upon simple catches, like *Conundrums*, in which form they are usually called *RIDDLES*, such as—

"Though you set me on foot,  
I shall be on my head."

The answer is, *A nail in a shoe*. The celebrated Enigma, by Lord Byron, (see 279, page 66), is an admirable specimen of what may be rendered through the form of an Enigma. Mr. Philp, the Editor of the first six volumes of "The Family Friend," was the first person who gave *The Enigma* a really useful application, making it the medium for conveying scientific problems and facts, instead of merely simple catches. The prize Enigmas reprinted from "The Family Friend" in "The Family Pastime," Vol. I., already alluded to, were written by Mr. Philp, and are excellent examples. Such Enigmas will be frequently introduced in our *Monthly Interview*.

2443. REBUSES are a class of Enigma generally formed by the first, sometimes the first and last, letters of words, or of transpositions of letters, or additions to words. Dr. Johnson, however, represents Rebus to be a word represented by a picture. And putting the Doctor's definition and our own explanation together, the reader may glean a good conception of the nature of the Rebus. Example:—

The father of the Grecian Jove;  
A little boy who's blind;  
The foremost land in all the world;  
The mother of mankind;  
A poet whose love-sonnets are  
Still very much admired;—  
The initial letters will declare  
A blessing to the tired.

Answer — Saturn; Love; England; Eve; Plutarch. The initials form *sleep*.

There is an excellent little work just published entitled "Philosophy and Mirth, United by, Pen and Pencil;" the novelty of which consists in this—

that many of the Enigmas are accompanied by Enigmatical pictures, so that the eye is puzzled as well as the ear. The price is 1s. 6d.

2444. PUZZLES vary very much. One of the simplest that we know is this:—  
Take away half of thirteen; and let eight remain.

Write XIII. on a slate, or on a piece of paper—rub out the lower half of the figures; and VIII. will remain.

What are termed "practical puzzles" are cut out of wood, cardboard, ivory, &c., and may be purchased at the toy-shops.

2445. BEDS FOR THE POOR. — Beech-tree leaves are recommended for filling the beds of poor persons. They should be gathered on a dry day in the autumn, and perfectly dried. It is said that they smell grateful, and will not harbour vermin. They are also very springy.

2446. PLUM OR APRICOT JAM. — After taking away the stones from the apricots, and cutting out any blemishes they may have, put them over a slow fire, in a clean stew-pan, with half a pint of water; when scalded, rub them through a hair sieve; to every pound of pulp put one pound of sifted loaf sugar, put it into a preserving-pan over a brisk fire, and when it boils skim it well, and throw in the kernels of the apricots and half an ounce of bitter almonds, blanched; boil it a quarter of an hour fast, and stirring it all the time; remove it from the fire, fill it into pots, and cover them. Greengages may be done in the same way.

2447. COVERING FOR PRESERVES. — White paper, cut to a suitable size, dipped in brandy, and put over the preserves when cold, and then a double paper tied over the top. All preserves should stand a night before they are covered. (See 61). Instead of brandy, the white of eggs may be used to glaze the paper covering, and the paper may be pasted round the edge of the pot instead of tied — it will exclude the air better; and may be pasted as well as tied.

**2448. ARBACK (IMITATIVE).** — Dissolve two scruples of flowers of ben-jamin in a quart of best rum, and it will impart to it the fragrance of arrack.

**2449. ARROWROOT BLANC-MANGE.** — A tea-cupful of arrowroot to a pint of milk; boil the milk with twelve sweet and six bitter almonds, blanched and beaten; sweeten with loaf sugar, and strain it; break the arrowroot with a little of the milk as smooth as possible; pour the boiling milk upon it by degrees, stir the while, put it back into the pan, and boil a few minutes, still stirring; dip the shape in cold water before you put it in, and turn it out when cold.

**2450. ARTICHOKEs.** — Soak them in cold water, wash them well; put them into plenty of boiling water, with a handful of salt, and let them boil gently for an hour and a half or two hours; trim them and drain on a sieve; send up melted butter with them, which some put into small cups, one for each guest.

**2451. JERUSALEM ARTICHOKEs** may be cooked in the way directed for potatoes (123, 128, 131, &c.)

**2452. ASPARAGUS** (often miscalled "*asparagras*"). — Scrape the stalks till they are clean; throw them into a pan of cold water, tie them up in bundles, of about a quarter of a hundred each; cut off the stalks at the bottom all of a length, leaving enough to serve as a handle for the green part; put them into a stew-pan of boiling water, with a handful of salt in it. Let it boil, and skim it. When they are tender at the stalk, which will be in from twenty to thirty minutes, they are done enough. Watch the exact time of their becoming tender; take them up that instant. While the asparagus is boiling, toast a round of a quartern loaf, about half an inch thick; brown it delicately on both sides; dip it lightly in the liquor the asparagus was boiled in, and lay it in the middle of a dish; melt some butter, but do not put it over them. Serve butter in a boat.

**2453. APPLE PUDDINGS.** — One

pound of flour, six ounces of very finely minced beef suet; roll thin, and fill with one pound and a quarter of boiling apples; add grated rind and strained juice of small lemon, tie it in a cloth; boil one hour and twenty minutes, or longer, in the water. A small slice of fresh butter stirred into it when it is sweetened will be an acceptable addition; grated nutmeg, or cinnamon in fine powder, may be substituted for lemon-rind. For a richer pudding use half a pound of butter for the crust, and add to the apples a spoonful or two of orange or quince marmalade.

**2454. APPLES IN SYRUP.** — Pare and core some hard apples, and throw them into a basin of water; as they are done, clarify as much loaf sugar as will cover them; put the apples in along with the juice and rind of a lemon, and let them simmer till they are quite clear; care must be taken not to break them; place them on the dish they are to appear upon at table, and pour the syrup over. These are for immediate use.

**2455. VAPOUR BATHS** may be made by putting boiling water in a pan, and placing a cane bottom chair in the pan, the patient sitting upon it, enveloped from head to foot in a blanket covering the bath. Sulphur, spirit vapour, herbal, and other baths may be obtained in the same manner. They should not be taken except under medical advice.

**2456. BARLEY BROTH (SOOTH).** — Dr. Kitchener, from whose "*Cook's Oracle*" we take this receipt, after testing it, says:—This is a most frugal, agreeable, and nutritive meal. It will neither lighten the purse nor lie heavy on the stomach. It will furnish you with a pleasant soup, AND MEAT for eight persons. Wash three quarters of a pound of Scotch Barley in a little cold water; put it in a soup-pot with a shin or leg of beef, of about ten pounds' weight, sawed into four pieces (tell the butcher to do this for you); cover it well with cold water; set it on the fire; when it boils skim it very clean and put in two onions, of about three

ounces weight each: set it by the side of the fire to simmer very gently about two hours: then skim all the fat clean off, and put in two heads of celery, and a large turnip cut into small squares; season it with salt, and let it boil an hour-and-a-half longer, and it is ready: take out the meat (carefully with a slice, and cover it up, and set it by the fire to keep warm), and skim the broth well before you put it in the tureen. Put a quart of the soup into a basin,—put about an ounce of flour into a stew-pan, and pour the broth to it by degrees, stirring it well together; set it on the fire, and stir it till it boils, then let it boil up and it is ready. Put the meat in a ragout dish, and strain the sauce through a sieve over the meat; you may put to it some capers or minced gherkins or walnuts, &c. If the beef has been stewed with proper care in a very gentle manner, and been taken up at “the critical moment when it is just tender,” you will obtain an excellent savoury meal for eight people at fivepence, i.e. for only the cost of the glass of port wine. (At present prices, about ninepence per head). The doctor omitted potatoes and bread from his calculation!

2457. **DRYING HERBS.**—Fresh herbs, are preferable to dried ones, but as they cannot always be obtained, it is most important to dry herbs at the proper seasons:—

2458. **BASIL** is in a fit state for drying about the middle of August.

2459. **BURRET** in June, July, and August.

2460. **CHERVIL** in May, June, and July.

2461. **ELDER FLOWERS** in May, June, and July.

2462. **FENNEL** in May, June, and July.

2463. **KNOTTED MARJORAM** during July.

2464. **LEMON THYME** end of July and through August.

2465. **MINT** end of June and July.

2466. **ORANGE FLOWERS** May, June, and July.

2467. **ORANGE THYME** (a delicious herb), June and July.

2468. **PARSLEY** May, June, and July.

2469. **SAGE** August and September.

2470. **SUMMER SAVOURY** end of July and August.

2471. **TARROGAN** June, July, and August.

2472. **THYME** end of July and August.

2473. **WINTER SAVOURY** end of July and August.

2473\*. These herbs always at hand will be great aid to the cook. Herbs should be gathered on a dry day; they should be immediately well cleansed, and dried by the heat of a stove, or Dutch oven. The leaves should then be picked off, pounded and sifted, put into stoppered bottles labelled, and put away for use.

2474. **GINGER BISCUITS AND CAKES.**—Work into small crumbs three ounces of butter, two pounds of flour; add three ounces of powdered sugar and two of ginger, in fine powder, knead into a stiff paste, with new milk, roll thin, cut out with a cutter; bake in a slow oven until crisp through, keep of a pale colour. Additional sugar may be used when a sweeter biscuit is desired. For good ginger cakes, butter six ounces, sugar eight, for each pound of flour; wet the ingredients into a paste with eggs; a little lemon-grate will give an agreeable flavour.

2475. **BROWN STOCK** may be made from all sorts of meat, bones, remnants of poultry, game, &c. The shin of beef makes an excellent stock.

2476. **BROWN STOCK.**—Put five pounds of shin of beef, three pounds of knuckle of veal, and some sheep's-trotters or cow-heel into a closely-covered stewpan, to draw out the gravy very gently, and allow it nearly to dry up until it becomes brown. Then pour in sufficient boiling water to entirely cover the meat, and let it boil up, skimming it frequently; seasoning it with whole peppers, salt, and roots, herbs, and vegetables of any kind. That being done, let it boil gently five

or six hours, pour the broth off from the meat, and let it stand during the night to cool. The following morning take off the scum and fat, and put it away in a stone jar for further use.

**2477. BROWN GRAVY.**—Three onions sliced, and fried in butter to a nice brown; toast a large thin slice of bread a considerable time until quite hard and of a deep brown. Take these, with any piece of meat, bone, &c., and some herbs, and set them on the fire, with water according to judgment, and stew down until a thick gravy is produced. Season, strain, and keep cool.

**2478. CLEAR GRAVY SOUP.**—This may be made from shin of beef, which should not be large or coarse. The meat will be found serviceable for the table. From ten pounds of the meat let the butcher cut off five or six from the thick fleshy part, and again divide the knuckle, that the whole may lie compactly in the vessel in which it is to be stewed. Pour in three quarts of cold water, and when it has been brought slowly to boil, and been well skimmed, throw in an ounce and a half of salt, half a large teaspoonful of pepper-corns, eight cloves, two blades of mace, a faggot of savoury herbs, a couple of small carrots, and the heart of a root of celery; to these add a mild onion or not, at choice. When the whole has stewed very softly for four hours, probe the large bit of beef, and if quite tender, lift it out for table; let the soup be simmered from two to three hours longer, and then strain it through a fine sieve, into a clean pan. When it is perfectly cold, clear off every particle of fat; heat a couple of quarts, stir in, when it boils, half an ounce of sugar, a small table-spoonful of good soy, and twice as much of Harvey's sauce, or instead of this, of clear and fine mushroom catchup. If carefully made, the soup will be perfectly transparent and of good colour and flavour. A thick slice of ham will improve it, and a pound or so of the neck of beef with an additional pint of water, will likewise enrich its quality. A small

quantity of good broth may be made of the fragments of the whole boiled down with a few fresh vegetables.

**2479. BEEF EXTRACT** (AS RECOMMENDED BY HADON LIEBIG).—Take a pound of good, juicy beef, from which all the skin and fat has been cut away, chop it up like sausage-meat; mix it thoroughly with a pint of cold water, place it on the side of the stove to heat *very slowly*, and give an occasional stir. It may stand two or three hours before it is allowed to simmer, and will then require but fifteen minutes of gentle boiling. Salt should be added when the boiling first commences, and this, for invalids, in general, is the only seasoning required. When the extract is thus far prepared, it may be poured from the meat into a basin, and allowed to stand until any particles of fat on the surface can be skimmed off, and the sediment has subsided and left the soup quite clear, when it may be poured off gently, heated in a clean saucepan, and served. The scum should be well cleared as it accumulates.

**2480. BEEF TEA.**—The above, by adding water forms the best beef tea, or broth, for invalids.

**2481. ASPARAGUS SOUP.**—Two quarts of good beef or veal steak, four onions, two or three turnips, some sweet herbs, and the white parts of a hundred young asparagus; if old, half that quantity; and let them simmer till fit to be rubbed through a tammy, strain and season it; have ready the boiled green tops of the asparagus, and add them to the soup.

**2482. BACON.**—Dr. Kitchenery very justly says:—The boiling of bacon is a very simple subject to comment upon; but our main object is to teach common cooks the art of dressing common food in the best manner. Cover a pound of nice streaked bacon with cold water, let it boil gently for three quarters of an hour; take it up, scrape the under side well, and cut off the rind; grate a crust of bread not only on the top, but all over it, as you would ham, put it before the fire for a few minutes:

not too long, or it will dry it and spoil it. Bacon is sometimes as salt as salt can make it, therefore before it is boiled it must be soaked in warm water for an hour or two, changing the water once; then pare off the rusty and smoked part, trim it nicely on the under side, and scrape the rind as clean as possible.

**2483. BACON** is an extravagant article in housekeeping; there is often twice as much dressed as need be, when it is sent to table as an accompaniment to boiled poultry or veal, a pound and a half is plenty for a dozen people. A good German sausage is a very economical substitute for bacon; or fried Pork sausage. (*See* 17, 2172, 2186.)

**2484 HAM OR BACON SLICES** should not be more than one-eighth of an inch thick, and, for delicate persons, should be soaked in hot water for a quarter of an hour, and then well wiped and dried before broiling. If you wish to curl it, roll it up, and put a wooden skewer through it; then it may be dressed in a cheese toaster, or a Dutch oven.

**2485. PIC-NIC BISCUITS.**—Take two ounces of fresh butter, and well work it with a pound of flour. Mix thoroughly with it half a salt-spoonful of pure carbonate of soda; two ounces of sugar; mingle thoroughly with the flour; make up the paste with spoonfuls of milk; it will require scarcely a quarter of a pint. Knead smooth, roll a quarter of an inch thick, cut in rounds about the size of the top of a small wine-glass; roll these out thin, prick them well, lay them on lightly floured tins, and bake in a gentle oven until crisp. When cold put into dry canisters. Thin cream used instead of milk, in the paste, will enrich the biscuits. Caraway seeds or ginger can be added, to vary these at pleasure. (*See* 473.)

**2486. BLACK PAPER PATTERNS.**—Mix some lamp-black with sweet oil. With a piece of flannel cover sheets of writing-paper with the mixture; dab the paper dry with a bit of fine linen. When using put the black side on

another sheet of paper, and fasten the corners together with small pins. Lay on the back of the black paper the pattern to be drawn, and go over it with the point of a steel drawing pencil; the black will then leave the impression of the pattern on the under sheet, on which you may draw it with ink.

**2487. PATTERNS ON CLOTH OR MUSLIN** are drawn with a pen dipped in stone blue, a bit of sugar, and a little water: wet to the consistence wanted.

**2488. BLACK SILK REVIVER.**—Boil logwood in water half an hour; then simmer the silk half an hour; take it out, and put into the dye a little blue vitriol, or green copperas; cool it and simmer the silk for half an hour. Or, boil a handful of fig-leaves in two quarts of water until it be reduced to one pint; squeeze the leaves, and bottle the liquor for use. When wanted, sponge the silk with it.

**2489. BLACKBERRIES** are very beneficial in cases of dysentery. The berries are healthful eating. Tea made of the roots and leaves is good; and syrup made from the berries excellent.

**2490. BLACKBERRY WINE**—Gather when ripe, on a dry day. Put into a vessel, with the head out, and a tap fitted near the bottom; pour on them boiling water to cover them. Mash the berries with your hands, and let them stand covered till the pulp rises to the top and forms a crust, in three or four days. Then draw off the fluid into another vessel, and to every gallon add one pound of sugar; mix well, and put it into a cask, to work for a week or ten days, and throw off any remaining lees, keeping the cask well filled, particularly at the commencement. When the working has ceased, bung it down; after six to twelve months it may be bottled. (*See* 221.)

**2491. BLACKING FOR LEATHER SEATS, &c**—Beat well the yokes of two eggs and the white of one; mix a table-spoonful of gin and a tea-spoonful of sugar, thicken it with ivory black; add it to the eggs, and use as common black-

ing; the seats or cushions being left a day or two to harden. This is good for dress boots and shoes.

**2492. BLEACHING STRAW BONNETS, &c.**—Wash them in pure water, scrubbing them with a brush. Then put them into a box in which has been set a saucer of burning sulphur. Cover them up, so that the fumes may bleach them.

**2493. CLEANING STRAW BONNETS.**—They may be bewashed with soap and water, rinsed in clear water, and dried in the air. Then wash them over with white of egg well beaten. Remove the wire before washing. Old straw bonnets may be picked to pieces, and put together for children, the head parts being cut out.

**2494. BIRDS, QUADRUPEDS, &c., FOR STUFFING.**—Large Animals should be carefully skinned with the horns, skull, tail, hoofs, &c., entire. Then rub the inside of the skin thoroughly with a mixture of salt, pepper, and alum, and hang up to dry. Large birds may be treated in the same way, but should not be put into spirits.

**2495. SMALL BIRDS** may be preserved as follows:—Take out the entrails, open a passage to the brain, which should be scooped out through the mouth; introduce into the cavities of the skull and the whole body some of the mixture of salt, alum, and pepper, putting some through the gullet and whole length of the neck; then hang the bird in a cool, airy place—first by the feet, that the body may be impregnated by the salts, and afterwards by a thread through the under mandible of the bill, till it appears to be sweet; then hang it in the sun, or near a fire: after it is well dried, clean out what remains loose of the mixture, and fill the cavity of the body with wool, oakum, or any soft substance, and pack it smooth in paper.

**2496. FISHES.**—Large fishes should be opened in the belly, the entrails taken out, and the inside well rubbed with pepper, and stuffed with oakum. Small fishes may be put in spirit, as well

as reptiles, worms, and insects, (except butterflies and moths), insects of fine colours, should be pinned down in a box prepared for that purpose, with their wings expanded.

**2497. INSECTS FROM BIRD-CAGES, DRAWERS, &c.**—To keep away insects from bird's eyes, suspend a little bag of sulphur in the cage. This is said to be healthful for birds generally, as well as serving to keep away insects by which they become infested.

**2498. BOOTS AND SHOES** should be cleaned frequently, whether they are worn or not, and should never be put to stand in a damp place, nor be put too near to the fire to dry. In cleaning, be careful to brush the dirt from the seams, and not to scrape it with a knife, or you will cut the stitches. Let the hard brush do its work thoroughly well, and the polish will be all the brighter (See 70.)

**2499. BOOT TOPS.**—Clean boot tops with one ounce of white vitriol, and one ounce of oxalic acid, dissolved in a quart of warm water. Apply with a clean sponge. Or, sour milk one pint, gum arabic, half an ounce, juice of a lemon, white of an egg, and one ounce of vitriol well mixed.

**2500. BOTTLES.**—There is no easier method of cleaning glass bottles than putting into them fine coals, and well shaking, either with water or not, hot or cold, according to the substance that fouls the bottle. Charcoal left in a bottle or jar for a little time will take away disagreeable smells.

**2501. BLOND LACE** may be revived by breathing upon it, and shaking and flapping it. The use of the iron turns the lace yellow.

**2502. BOARDS, TO SCOUR.**—Lime, one part, sand three parts, soft soap, two parts. Lay a little on the boards with the scrubbing brush, and rub thoroughly. Rinse with clean water, and rub dry. This will keep the boards of a good colour, and will also keep away vermin.

**2503. BILES.**—These should be brought to a head by warm poultices

of cammomile flowers, or boiled white lily root, or onion root; by fermentation with hot water, or by stimulating plasters. When ripe, they should be discharged by a needle, or the lancet. But this should not be attempted, until they are fully proved. Constitutional treatment.—Peruvian bark and port wine, and sea-bathing are desirable. Purgatives, diuretics, &c.

2504. **DYEING BONNETS.**—Chips and straw bonnets or hats may be dyed black by boiling them three or four hours in a strong liquor of logwood, adding a little green copperas occasionally. Let the bonnets remain in the liquor all night, then take out to dry in the air. If the black is not satisfactory, dye again after drying. Rub inside and out with a sponge moistened in fine oil. Then block.

2505. **BOTTLING AND FINING.**—Corks should be sound, clean, and sweet. Beer and porter should be allowed to stand in the bottles, a day or two before corked. If for speedy use, wiring is not necessary. Laying the bottles on their sides will assist the ripening for use. Those that are to be kept, should be wired, and put to stand upright in saw-dust. Wines should be bottled on the coming of spring. If not fine enough, draw off a jug and dissolve isinglass in it, in the proportion of half an ounce to ten gallons, and then pour back through the bung-hole. Let it stand a few weeks longer. Tap the casks above the lees. When the isinglass is put into the cask, stir it round with a stick, taking great care not to touch the lees at the bottom. For white wine only, mix with the isinglass in a quarter of a pint of milk to each gallon of wine. White of eggs, beaten with some of the wine—one white to four gallons, makes a good fining.

2506. **PRESERVED PEACHES.**—Wipe, and pick the fruit, and have ready a quarter of the weight of fine sugar in powder. Put the fruit into an ice-pot that shuts very close; throw the sugar over it, and then cover the fruit with

brandy. Between the top and cover of the pot put a piece of double whity-brown paper. Set the pot in a saucepan of water till the brandy be as hot as you can bear to put your finger into, but it must not boil. Put the fruit into a jar, and pour on the brandy. Cover as preserves.

2507. **BATTER PUDDING, BAKED OR BOILED.**—Six ounces fine flour, a little salt, and three eggs; beat well with a little milk, added by degrees until it is the thickness of cream; put into a butter-dish; bake three quarters of an hour; or if boiled put it into a buttered and floured basin, tied over with a cloth; boil one hour and a half or more.

2508. **APPLE DUMPLINGS.**—Paste the same as for apple pudding, divide into as many pieces as dumplings are required; peel and core the apples; roll out your paste large enough; put in the apples; close the dumplings, tie them in cloths very tight. Boil them one hour; when you take them up, dip them quickly in cold water, and put them in a cup while you untie them; they will turn out without breaking.

2509. **DRIED APPLES** are produced by taking fine apples of good quality, and placing them in a very slow oven for several hours. Take them out occasionally, rub and press them flat. Continue until they are done. If they look dry, rub over them a little clarified sugar.

2510. **TOMATO, OR LOVE APPLE SAUCE.**—Twelve tomatas, ripe and red; take off the stalk; cut in halves; squeeze enough to get all the water and seeds out; put in a stew-pan with a capsicum, and two or three table-spoonful of beef gravy; set on a slow stove till properly melted; rub them through a tamis into a clean stew-pan, add a little white pepper and salt, and let them simmer a few minutes.—The French cook adds an onion or eschalot, a clove or two, or a little tarragon vinegar.

2511. **APPLE PIE.**—Pare, core, and quarter the apples; boil the cores and

parings in sugar and water; strain off the liquor, adding more sugar; grate the rind of a lemon over the apples, and squeeze the juice into the syrup; mix half a dozen cloves with the fruit, put in a piece of butter the size of a walnut; cover with puff-paste. (See 98.)

2512. **BARLEY WATER.** — Pearl barley, two ounces; wash till freed from dust, in cold water. Boil in a quart of water a few minutes, strain off the liquor, throw it away. Then boil the barley in four pints and a half of water, until it be reduced one half.

2513. **APPLE FRITTERS.** — Peel and core some fine pippins, and cut into slices. Soak them in wine, sugar, and nutmeg, for a few hours. Batter of four eggs, to a table-spoonful of rose-water, a table-spoonful of wine, and a table-spoonful of milk; thicken with enough flour, stirred in by degrees; mix two or three hours before wanted. Heat some butter in a frying-pan; dip each slice of apple separately in the batter, and fry brown; sift pounded sugar, and grate a nutmeg over them.

2514. **APPLE WATER.** — A tart apple well baked and mashed; on which pour a pint of boiling water. Beat up, cool, and strain. Add sugar if desired. Cooling drink for sick persons.

2515. **IRON AND STEEL GOODS FROM RUST.** — Dissolve half an ounce of camphor in one pound of hog's lard; take off the scum; mix as much black lead as will give the mixture an iron colour. Iron and steel goods, rubbed over with this mixture, and left with it on twenty-four hours, and then dried with a linen cloth, will keep clean for months. Valuable articles of cutlery should be wrapped in ZINC FOIL, or be kept in boxes lined with zinc. This is at once an easy and most effective method.

2516. **ARROWROOT JELLY.** — A table-spoonful of arrow-root, and cold water to form a paste; add a pint of boiling water; stir briskly, boil a few minutes. A little sherry and sugar may be added. For infants, a drop or

two of the essence of caraway-seed or cinnamon is preferable.

2517. **ACCIDENTS IN CARRIAGES.** — It is safer, as a general rule, to keep your place, than to jump out. Getting out of a gig over the back, provided you can hold on a little while, and run, is safer than springing from the side. But it is best to keep your place, and hold fast. In accidents people act not so much from reason as from excitement. But good rules, firmly impressed upon the mind, generally rise uppermost, even in the midst of fear. (See 398, 526, 559, 695, 2006).

2518. **RESTORING COLOUR TO SILK.** — When the colour has been taken from silk by acids, it may be restored by applying to the spot a little hartshorn, or salvolatile.

2519. **ALABASTER.** — For cleaning it there is nothing better than soap and water. Stains may be removed by washing with soap and water, then white-washing the stained part, letting it stand some hours, then washing off the white-wash, and rubbing the stained part.

2520. **BISHOP** is mulled wine, made with Burgundy.

2521. **CARDINAL** is mulled wine, made with old Rhenish wine.

2522. **POPE** is mulled wine, made with Tokay wine.

2523. **ALMOND CUSTARDS.** — Blanch and pound fine, with half a gill of rose water, six ounces of sweet, and half an ounce of bitter almonds, boil a pint of milk, with a few coriander seeds, a little cinnamon and lemon peel; sweeten it with two ounces and a half of sugar, rub the almonds through a fine sieve, with a pint of cream, strain the milk to the yolks of eight eggs, and the whites of three well beaten; stir it over a fire till it is of a good thickness, take it off the fire, and stir it till nearly cold, to prevent its curdling.

2524. **SPONGE CAKE.** — Take equal weight of eggs and sugar; half their weight in sifted flour; to twelve eggs, add the grated rind of three

lemons, and the juice of two. Beat the eggs carefully, white and yolks separately, before they are used. Stir the materials thoroughly together, and bake in a quick oven.

**2525. ALMOND SPONGE CAKE** is made by adding blanched almonds to the above.

**2526. BOSTON APPLE PUDDING.**—Peel and core one dozen and a half of good apples; cut them small; put them into a stew-pan with a little water, cinnamon, two cloves, and the peel of a lemon; stew over a slow fire till soft; sweeten with moist sugar, and pass it through a hair-sieve; add the yolks of four eggs and one white, a quarter of a pound of good butter, half a nutmeg, the peel of a lemon grated, and the juice of one lemon: beat well together; line the inside of a pie-dish with good puff paste; put in the pudding, and bake half an hour.

**2527. APPLES SERVED WITH CUSTARD.**—Pare and core apples; cut them in pieces; bake or stew them with as little water as possible; when completely fallen and sweetened, put them in a pie dish, and, when cold, pour over them an unboiled custard, and put back into the oven till the custard is fixed. A Dutch oven will do. Equally good hot or cold.

**2528. ARSENIC** may be detected by a solution of blue vitriol dropped into the suspected liquid, which will turn green, if arsenic be present.

**2529. COPPER IN LIQUIDS** may be detected by spirit of hartshorn, which turns them blue.

**2530. CLOTHES BALLS.**—Fullers' earth dried till it crumbles to powder; moisten it with the juice of lemon; add a small quantity of pearl-ash, work and knead carefully together till it forms a thick paste; make into balls, and dry them in the sun. Moisten the spot on clothes with water, then rub it with the ball. Wash out the spot with pure water.

**2531. TINCTURE OF ALLSPICE.**—Bruised allspice one ounce and a half; brandy a pint. Steep a fortnight, oc-

asionally shaking, then pour off the clear liquor. Excellent for many of the uses of allspice, for making a bishop, mulling wine, flavouring graves, potted meats, &c. (See 2520.)

**2532. FRENCH BATTER.**—Two ounces of butter cut into bits, pour on it less than a quarter of a pint of water boiling; when dissolved add three quarters of a pint of water cold, so that it shall not be quite milk warm mix by degrees smoothly with twelve ounces of fine dry flour and a small pinch of salt, if the batter be for fruit fritters, but with more if for meat or vegetables. Before used, stir into it the whites of two eggs beaten to solid froth; previously to this, add a little water if too thick. This is excellent for frying vegetables, and for fruit fritters.

**2533. WASHING BED FURNITURE, &c.**—Before putting into the water, see that you shake off as much dust as possible, or you will greatly increase your labour. Use no soda, or pearl-ash, or the things will lose their colour. Use soft water, not hot, but warm. Have plenty of it. Rub with mottled soap. On wringing out the second liquor, dip each piece into cold hard water for finishing. Shake out well and dry quickly. If starch is desired, it may be stirred into the rinsing water.

**2534. MENDING.**—When you make a new article, always save the pieces until "mending day," which may come sooner than expected. It will be well even to buy a little extra quantity for repairs. Read over repeatedly the useful hints 203, 496 to 747, 878 to 905, 1097 to 1149. These numerous paragraphs contain most valuable suggestions that will be constantly useful, if well remembered. They should be read frequently for their full value to be secured. Let your domestics also read them, for nothing more conduces to good housekeeping than for the servant to understand the "system" which her mistress approves.

**2535. BED ROOMS** should not be

scoured in the winter time, as colds and sickness may be produced thereby. Dry-scouring, upon the French plan, which consists of scrubbing the floors with dry brushes, may be resorted to, and will be found more effective than can at first be imagined. If a bed-room is wet scoured, a dry day should be chosen—the windows should be opened, the linen removed, and a fire should be lit when the operation is terminated.

2536. ALUM WHEY. — A pint of cow's milk boiled with two drachms of alum, until a curd is found. Then strain off the liquor, and add spirit of nutmeg, two ounces; syrup of cloves an ounce. It is used in diabetes, and in uterine fluxes, &c.

2537. ANGLO JAPANESE WORK. — This is an elegant and easy domestic art. Take yellow withered leaves, dissolve gum, black paint, copal varnish, &c. Any articles may be ornamented with these simple materials. An old work-box, tea-caddy, flower-pots, fire-screens—screens of all descriptions, work-boxes, &c. Select perfect leaves, dry and press them between the leaves of books; rub the surface of the article to be ornamented with fine sand-paper, then give it a coat of fine black paint, which should be procured mixed at a colour-shop. When dry, rub smooth with pumice-stone, and give two other coats. Dry. Arrange leaves in any manner and variety, according to taste. Gum the leaves on the under side, and press them upon their places. Then dissolve some isinglass in hot water and brush it over the work. Dry. Give three coats of copal varnish, allowing ample time for each coat to dry. Articles thus ornamented last for years, and are very pleasing.

2538. APPETITE.—Appetite is frequently lost through excessive use of stimulants, food taken too hot, sedentary occupation, costiveness, liver disorder, and want of change of air. The first endeavour should be to ascertain and remove the cause. (See 1215, and 1273). Change of diet, and change of

air, will frequently be found more beneficial than medicines.

2539. BRANDY PEACHES.—Drop them into a weak, boiling lye, until the skin can be wiped off. Make a thin syrup to cover them, boil until they are soft to the finger-nail; make a rich syrup, and add, after they come from the fire, and while hot, the same quantity of brandy as syrup. The fruit must be covered.

2540. BASTINGS.—1, fresh butter; 2, clarified suet; 3, minced sweet herbs, butter, and claret, especially for mutton and lamb; 4, water and salt; 5, cream and melted butter, especially for a flayed pig; 6, yolks of eggs, grated biscuit, and juice of oranges.

2541. DREDGINGS.—1, flour mixed with grated bread; 2, sweet herbs dried and powdered, and mixed with grated bread; 3, lemon-peel dried and pounded, or orange-peel, mixed with flour; 4, sugar finely powdered, and mixed with pounded cinnamon, and flour or grated bread; 5, fennel seeds, corianders, cinnamon, and sugar, finely beaten, and mixed with grated bread or flour; 6, for young pigs, grated bread or flour, mixed with beaten nutmeg, ginger, pepper, sugar, and yolks of eggs; 7, Sugar, bread, and salt mixed.

2542. GARNISHES.—Parsley is the most universal garnish to all kinds of cold meat, poultry, fish, butter, cheese, and so forth. Horse-raddish is the garnish for roast beef, and for fish in general; for the latter, slices of lemon are sometimes laid alternately with heaps of horse-raddish.

Slices of lemon for boiled fowl, turkey, and fish, and for roast veal and calf's head.

Carrot in slices for boiled beef, hot or cold.

Barberries fresh or preserved for game.

Red beet-root sliced for cold meat, boiled beef, and salt fish.

Fried smelts as garnish for turbot.

Fried sausages or force meat balls round turkey, capon, or fowl

Lobster coral and parsley round boiled fish.

Fennel for mackerel and salmon, either fresh or pickled.

Currant jelly for game, also for custard or bread pudding.

Seville orange in slices for wild ducks, widgeons, teal, and so forth.

Mint, either with or without parsley, for roast lamb, either hot or cold.

Pickled gherkins, capers, or onions, for some kinds of boiled meat and stews.

2543. BATH BUNS.—A quarter of a pound of flour, four yolks and three whites of eggs, with four spoonfuls of solid fresh yeast. Beat in a bowl, and set before the fire to rise; then rub into one pound of flour ten ounces of butter, put in half a pound of sugar, and carraway-comfits; when the eggs and yeast are pretty light, mix by degrees all together, throw a cloth over it, and set before the fire to rise. Make the buns, and when on the tins, brush over with the yolk of egg and milk; strew them with carraway-comfits; bake in a quick oven.

2544. FRENCH BEANS.—Cut off the stalk-end, and strip off the strings, then cut them into shreds. If not quite fresh, have a basin of spring-water, with a little salt dissolved in it, and as the beans are cleaned and stringed, throw them in: put them on the fire in boiling water, with some salt in it; after they have boiled fifteen or twenty minutes, take one out and taste it; as soon as they are tender take them up, throw them into a colander or sieve to drain. Send up the beans whole when they are very young. When they are very large they look pretty cut into lozenges.

2545. WOW WOW SAUCE.—Chop parsley-leaves fine; take two or three pickled cucumbers, or walnuts, and divide into small squares, and set them bye ready; put into a saucepan butter as big as an egg; when it is melted, stir into it a table-spoonful of fine flour, and half a pint of the broth of the beef:

add a table-spoonful of vinegar, one of mushroom catchup, or port wine, or both, and a tea-spoonful of made mustard; simmer together till it is as thick as you wish, put in the parsley and pickles to get warm, and pour it over the beef, or send it up in a sauce-tureen. This is excellent for STEWED or BOILED BEEF.

2546. ROAST BEEF BONES furnish a very relishing luncheon or supper, prepared with poached or fried eggs and mashed potatoes, as accompaniments. Divide the bones, leaving good pickings of meat on each;—score them in squares, pour a little melted butter on them, and sprinkle them with pepper and salt; put them on a dish; set them in a Dutch-oven for half or three quarters of an hour, according to the thickness of the meat; keep turning them till they are quite hot and brown;—or broil them on the gridiron. Brown them, but don't burn them. Serve with Grill sauce.

2547. GRILL SAUCE.—To a quarter of a pint of gravy add half an ounce of butter and a dessert-spoonful of flour, well rubbed together, the same of mushroom or walnut catchup,—a tea-spoonful of lemon-juice, half a tea-spoonful of made mustard, and of minced capers, a little black pepper, a little rind of lemon, grated very thin, a salt-spoonful of essence of anchovies, and a little eschalot wine, or a very small piece of minced eschalot, and a little Chili vinegar, or a few grains of cayenne; simmer together for a few minutes; pour a little of it over the Grill, and send up the rest in a sauce-tureen.

2548. BEEF BROTH may be made by adding vegetables to (2479) Essence of beef—or you may wash a leg or shin of beef, crack the bone well, (desire the butcher to do it for you,) add any trimmings of meat, game, or poultry, heads, necks, gizzards, feet, &c., cover them with cold water,—stir it up well from the bottom, and the moment it begins to simmer, skim it carefully. Your broth must be perfectly

clear and limpid, on this depends the goodness of the soups, sauces, and gravies, of which it is the basis. Add some cold water to make the remaining scum rise, and skim it again. When the scum has done rising, and the surface of the broth is quite clear, put in one moderate-sized carrot, a head of celery, two turnips, and two onions—it should not have any taste of sweet herbs, spice, or garlic, &c.; either of these flavours can easily be added after, if desired—cover it close, set it by the side of the fire, and let it simmer very gently (so as not to waste the broth) for four or five hours, or more, according to the weight of the meat:—strain it through a sieve into a clean and dry stone pan, and set it in the coldest place you have, if for after use.

**2549. BEEF GLAZE, OR PORTABLE SOUP** is simply the essence of beef (2479) condensed by evaporation. It may be put into pots, like potted meats, or into skins, as sausages, and will keep for many months. If further dried in cakes or lozenges, by being laid on pans or dishes, and, frequently turned, it will keep for years, and supply soup at any moment.

**2550. STEWED BRISKET BEEF.**—Stew in sufficient water to cover the meat; when tender, take out the bones, and skim off the fat; add to the gravy, when strained, a glass of wine and a little spice tied up in a muslin-bag. (This may be omitted.) Have ready either mushrooms, truffles, or vegetables boiled, and cut into shapes. Lay them on and round the beef; reduce part of the gravy to glaze, lay it on the top, and pour the remainder into the dish.

**2551. BEEF BRISKET** may be baked, the bones being removed, and the holes being filled with oysters, fat bacon, parsley, or all three in separate holes, these stuffings being chopped and seasoned to taste. Dredge it well with flour, pour upon it half a pint of broth, bake three hours, skin off the fat, strain the gravy over the meat, and garnish with cut pickles.

**2552. BAKING.**—In addition to the remarks (239 and 1972), we transcribe, by permission, the following remarks from Dr. Kitchener's excellent "Cook's Oracle." They were written for that work by Mr. Turner, an experienced baker, of London-street, Fitzroy-square:—

"BAKING is one of the cheapest, and most convenient ways of dressing a dinner in small families; and, I may say, that the oven is often *the only kitchen a poor man has*, if he wishes to enjoy a joint of meat at home with his family.

"I don't mean to deny the superior excellence of roasting to baking; but some joints, when baked, so nearly approach to the same when roasted, that I have known them to be carried to the table, and eaten as such with great satisfaction.

"LEGS and LOINS of PORK, LEGS of MUTTON, FILLETS of VEAL, and many other joints, will bake to great advantage, if the meat be good; I mean well fed, rather inclined to be fat; if the meat be poor, no baker can give satisfaction.

"When baking a joint of meat, before it has been half baked, I have seen it start from the bone, and shrivel up in a manner scarcely to be believed.

"Besides those joints above mentioned, I shall enumerate a few baked dishes which I can particularly recommend:

"A PIG, when sent to the baker prepared for baking, should have its ears and tail covered with buttered paper properly fastened on, and a bit of butter tied up in a piece of linen to baste the back with, otherwise it will be apt to blister: with a proper share of attention from the baker, I consider this way equal to a roasted one.

"A GOOSE prepared the same as for roasting, taking care to have it on a stand, and when half done to turn the other side upwards. A DUCK the same.

"A BUTTOK or BEEF the following way is particularly fine. After it has been in salt about a week, to be well washed, and put into a brown earthen pan, with a pint of water; cover the pan tight over with two or three thicknesses of cap or foolscap paper—never cover anything that is to be baked with brown paper, the pitch and tar which are in brown paper will give the meat a smoky, bad taste—give it four or five hours in a moderately-heated oven.

"A HAM (if not too old) put in soak for an

hour, taken out and wiped, a crust made sufficient to cover it all over, and baked in a moderately-heated oven, cuts fuller of gravy, and of a finer flavour, than a boiled one.

"I have been in the habit of baking small **COD-FISH**, **HADDOCK**, and **MACKAREL**, with a dust of flour, and some bits of butter put on them. **EELS**, when large and stuffed, **HERRINGS** and **SPRATS**, in a brown pan, with vinegar and a little spice, and tied over with paper:

"A **HARE**, prepared the same as for roasting, with a few pieces of butter, and a little drop of milk put into the dish, and basted several times, will be found nearly equal to roasting; or cut it up, season it properly, put it into a jar or pan, and cover it over, and bake it in a moderate oven for about three hours.

"In the same manner I have been in the habit of baking **LEGS** and **SHINS** of **BEEF**, **OX CHEEKS**, &c., prepared with a seasoning of onions, turnips, &c.:—they will take about four hours: let them stand till cold, to skim off the fat; then warm it up all together, or in part, as you may want.

"All these I have been in the habit of baking for the first families.

"The time each of the above articles should take depends much upon the state of the oven, and I consider the baker a sufficient judge; if they are sent to him in time, he must be very neglectful if they are not ready at the time they are ordered."

**2553. BEEF, COLD, BOILED.**—The same as roast beef bones (2546). The meat should have been under-done in the first instance. Capital relish with the accessories.

**2554. BEEF (RUMP) STEAK AND ONION SAUCE.**—Peel and slice two large onions, put them into a quart stewpan, with two table-spoonfuls of water; cover the pan close, and set on a slow fire till the water has boiled away, and the onions have got a little browned,—then add half a pint of good broth, and boil the onions till they are tender; strain the broth from them, and chop them very fine, and season it with mushroom catchup, pepper, and salt; put the onion into it, and let it boil gently for five minutes, pour it into the dish, and lay over it a broiled rump steak. If instead of broth you use good beef gravy, it will be superlative.

**2555. ROUND OF SALT BEEF.**—Skewer it tight and round, and tie a fillet of broad tape round it. Put it into plenty of cold water, and carefully skim the scum; let it boil till all the scum is removed, and then put the boiler on one side of the fire, to keep simmering slowly till it is done. Half a round may be boiled for a small family. When you take it up, wash the scum off with a paste-brush—garnish with carrots and turnips.

**2556. H. BONE OF BEEF.**—Manage the same as the round. The soft, marrow-like fat which lies on the back is best when hot, and the hard fat of the upper corner is best cold.

**2557. HASHED MUTTON OR BEEF.**—Take the meat, slice small, trim off the brown edges, and stew down the trimmings with the bones well broken, an onion, a bunch of thyme and parsley, a carrot cut into slices, a few peppercorns, cloves, salt, and a pint and a half of water or stock. When this is reduced to little more than three quarters of a pint, strain it, clear it from the fat, thicken it with a large dessert-spoonful of flour, or arrow-root, add salt and pepper, boil the whole for a few minutes, then lay in the meat and heat it well. Boiled potatoes are sometimes sliced hot into the hash.

**2558. ORNAMENTED LEATHER WORK.**—An excellent imitation of carved oak, suitable for frames, boxes, vases, and ornaments in endless variety, may be made of a description of leather called basil. The art consists in simply cutting out this material in imitation of natural objects, and in impressing upon it by simple tools, either with or without the aid of heat, such marks and characteristics as are necessary to the imitation. The rules given with regard to the imitation of leaves and flowers (1887) apply to Ornamental Leather Work. Begin with a simple object, and proceed by degrees to those that are more complicated. Cut out an ivy or an oak leaf, and impress the veins upon it; then arrange these in

groups, and affix them to frames, or otherwise. The tools required are ivory or steel points of various sizes, punches, and tin-shapes, such as are used for confectionery. The points may be made out of the handles of old tooth-brushes. Before cutting out the leaves the leather should be well soaked in water, until it is quite pliable. When dry it will retain the artistic shape. Leaves and stems are fastened together by means of liquid glue, and varnished with any of the drying varnishes, or with sealing-wax dissolved to a suitable consistency in spirits of wine. Wire, cork, gutta percha, bits of stems of trees, &c., may severally be used to aid in the formation of groups of buds, flowers, seed vessels, &c. Some beautiful specimens may be seen in the Crystal Palace.

**2559. BREWING.**—The best time of the year for brewing is the autumn. The spring is also suitable, but less so. It is a great object to secure a moderate temperature for the cooling of the worts, and to insure gradual fermentation. The brewing of home-made drinks has to a very great extent gone out of late years, even in country places; and therefore we have little inducement to occupy our limited space with the lengthy directions necessary to constitute a practical essay upon brewing. To those, however, who wish to enter upon the practice, without any previous knowledge, we would advise their calling in the aid of some one practically acquainted with the process for the first operation. By so doing they will save a great deal of trouble, disappointment, and expense. In all places, town or country, there are persons who have worked in brewing establishments, or in gentlemen's families where they have superintended the operations of the brew-house, and the aid of such persons would be valuable. With such assistance the following receipts will be of importance, since many who are able to go through the manipulations of brewing are unaware of the proper proportions to employ:—

**2560. ALE.**—Take three bushels of malt, three pounds of hops, fifty-two gallons of water for two workings.

*Or*—Malt, two bushels and a half; sugar, three pounds; hops, three pounds, coriander seeds, one ounce; capsicum, a drachm. Thirty-six gallons. This gives a pleasant ale, with a good body.

**2561. AMBER ALE.**—Three bushels of amber malt, three-quarters of a bushel of pale amber malt, two pounds of hops, a table-spoonful of salt. Three mashes, forty to fifty gallons. Skim, and fine with isinglass.

**2562. BURTON.**—One quarter of pale malt, eight pounds and a half of pale hops; mash three times. Work the first mash at 170°, second at 176°, third at 150°. Boil the first wort by itself, when boiling add three pounds of honey, a pound and a half of coriander seeds, one ounce of salt. Mix the worts when boiled, cool to 61°, set to work with a pint and a half of yeast. As soon as the gyle gets yeasty, skim the head half off; rouse the rest with another pint and a half of yeast, three-quarters of an ounce of bay salt, and a quarter of a pound of malt or bean flour. This makes a bozsheal.

**2563. EDINBURGH.**—Mash two barrels per quarter, at 183°; mash three quarters of an hour; let it stand one hour, and allow half an hour to run off. *Or*, mash one barrel per quarter, at 190°; mash three-quarters of an hour, let it stand three-quarters of an hour, and tap.

**2564. PORTER.**—Brown amber and pale malt, in equal quantities; turn them into the mash-tub. Turn on the first liquor at 165°; mash one hour, then coat the whole with dry malt. In one hour set the tap. Mix ten pounds of brown hops to a quarter of malt, half old, half new; boil the first wort briskly with the hops for three-quarters of an hour; after putting into the copper one pound and a half of sugar, and one pound and a half of extract of liquorice, to the barrel, turn it into coolers, rousing the wort the while.

Turn on the second liquor at 174°, set tap again in an hour. The second wort having run off, turn on again at 145°; mash an hour, and stand an hour; boil the second wort with the same hops for one hour. Turn into the coolers, and let into the tub at 64°, mixing the yeast as it comes down. Cleanse the second day at 80°, previously adding a mixture of flour and salt, and rousing well.

2565. BRASSES, BRITANNIA METALS, TINS, COPPERS, &c., are cleaned with a mixture of rotten-stone, soft soap, and oil of turpentine, mixed to the consistency of stiff putty. The stone should be powdered very fine and sifted; and a quantity of the mixture may be made sufficient to last for a long while. The articles should first be washed with hot water, to remove grease. Then a little of the above mixture, mixed with water, should be rubbed over the metal; then rub off briskly with dry clean rag or leather, and a beautiful polish will be obtained.

2566. BREATH TAINTED BY ONIONS.—Leaves of parsley, eaten with vinegar, will prevent the disagreeable consequences of eating onions.

2567. BUNIONS may be checked in their early development by binding the joint with adhesive plaster, and keeping it on as long as any uneasiness is felt. The bandaging should be perfect, and it might be well to extend it round the foot. An inflamed bunion should be poulticed, and larger shoes be worn. Iodine, twelve grains; lard or spermaceti ointment, half an ounce, makes a capital ointment for bunions. It should be rubbed on gently twice or thrice a day. (See 178, 1297.)

2568. SOFT CORNS may be relieved by placing a small piece of lint between the toes; or be rubbed occasionally with sweet oil.

2569. BAD BUTTER may be improved greatly by dissolving it thoroughly in hot water; let it cool, then skim it off, and churn again, adding a little good salt and sugar. A small quantity can be tried and approved

before doing a larger one. The water should be merely hot enough to melt the butter, or it will become oily.

2570. GILT FRAMES may be protected from flies and dust by oiled tartan pinned over them. Tartan already prepared, may be purchased at the upholsterers'. If it cannot be procured, it is easily made by brushing boiled oil over cheap tartan. It is an excellent material for keeping dust from bookcases, wool work, and every description of household ornament.

2571. SALT BUTTER may be freshened by churning it with new milk in the proportion of a pound of butter to a quart of milk. Treat the butter in all respects in churning as fresh. Cheap earthenware churns for domestic use may be had at any hardware shop.

2572. CABBAGE-WATER should be thrown away immediately it is done with, and clean water thrown after it, or it will give rise to unpleasant smells. A little charcoal thrown with clear water into a sink will disinfect and deodorise it.

2573. CALVES' FEET' JELLY.—It is better to buy the feet of the butcher, than at the tripe-shop ready boiled, because the best portion of the jelly has been extracted. Slit them in two, and take every particle of fat from the claws; wash well in warm water, put them in a large stew-pan, and cover with water; skim well and let boil gently six or seven hours, until reduced to about two quarts, then strain and skim off any oily substance on the surface. It is best to boil the feet the day before making the jelly, as, when the liquor is cold, the oily part being at the top, and the other being firm, with pieces of kitchen paper applied to it, you may remove every particle of the oily substance without wasting the liquor. Put the liquor in a stew-pan to melt, with a pound of lump sugar, the peel of two, and the juice of six lemons, six whites and shells of eggs beat together, and a bottle of sherry or Madeira; whisk the whole together until it is on the boil, then put it by

the side of the stove, and let it simmer a quarter of an hour; strain it through a jelly-bag; what is strained first must be poured into the bag again, until it is as bright and clear as rock water; then put the jelly in moulds, to be cold and firm; if the weather is too warm, it requires some ice. When it is wished to be very *stiff*, half an ounce of isinglass may be added when the wine is put in. It may be flavoured by the juice of various fruits and spices, &c., and coloured with saffron, cochineal, red beet-juice, spinach-juice, claret, &c., and it is sometimes made with cherry brandy, red noyseau, curaçoa, or essence of punch.

2574. OX-HEEL JELLY is made in the same manner.

2575. LAMP WICKS.—Old cotton stockings may be made into lamp wicks, and will answer very well.

2576. BEAT A CARPET on the wrong side first; and then more gently on the right side. Beware of using sticks with sharp points, which may tear the carpet.

2577. CLEANING CARPETS. — Take a pail of cold water, and add to it three gills of ox-gall. Rub it into the carpet with a soft brush. It will raise a lather, which must be washed off with clear cold water. Rub dry with a clean cloth. In nailing down a carpet after the floor has been washed, be certain that the floor is quite dry, or the nails will rust and injure the carpet. Fullers' earth is used for cleaning carpets, and weak solutions of alum or soda are used for reviving the colours. The crumb of a hot wheaten loaf rubbed over a carpet has been found effective.

2578. SWEETENING CASKS. — Half a pint of vitriol mixed with a quart of water, and the mixture poured into the barrel, and roll about; next day add one pound of chalk, and roll again. Bung down for three or four days, then rinse well with hot water.

2579. CAUTIONS IN VISITING THE SICK.—Do not visit the sick when you are fatigued, or when in a

state of perspiration, or with the stomach empty—for in such conditions you are liable to take the infection. When the disease is very contagious, take the side of the patient which is near to the window. Do not enter the room the first thing in the morning before it has been aired; and when you come away, take some food, change your clothing immediately, and expose the latter to the air for some days. Tobacco-smoke is a preventive of malaria.

2580. CHAMOMILE FLOWERS should be gathered on a fine day, and dried upon a tray placed in the sun; all herbs should be treated in the same manner.

2581. CHAMOMILE TEA. — One ounce of the flowers to a quart of water boiling. Simmer fifteen minutes and strain. Emetic, when taken warm; tonic, when cold. Dose, a wine-glassful to a breakfast-cup.

2582. ORANGE-PEEL, dried, added to chamomile flowers, in the proportion of half the quantity of the flowers, improves the tonic.

2583. DESSERT CHESNUTS. — Roast them well, take off the husks, dissolve four ounces of lump sugar in a wine-glass of water, then add the juice of a lemon. Put the chesnuts into this liquor, and stew them over a slow fire for ten minutes; add sufficient orange-flower water (if approved) to flavour the syrup; grate lump sugar over them, and serve up quite hot.

2584. CARVING.—CEREMONIES OF THE TABLE, &c. — A dinner-table should be well laid, well lighted, and always afford a little spare room. It is better to invite one friend less in number, than to destroy the comfort of the whole party.

2585. THE LAYING OUT OF A TABLE must greatly depend upon the nature of the dinner or supper, the taste of the host, the description of the company, and the appliances possessed. It will be useless, therefore, to lay down specific rules. The whiteness of the table-cloth, the clearness of glass,

the polish of plate, and the judicious distribution of ornamental groups of fruits and flowers, are matters deserving the utmost attention.

2586. A crowded table may be greatly relieved by a **SIDE-BOARD** close at hand, upon which may be placed many things incidental to the successive courses, until they are required.

2587. At large dinner parties, where there are several courses, it is well to have the **BILL OF FARE** neatly inscribed upon small tablets, and distributed about the table, that the diners may know what there is to come.

2588. **NAPKINS** should be folded neatly. The French method, which is very easy, of folding the napkin like a fan, placing it in a glass, and spreading out the upper part, is very pleasing. But the English method of folding it like a slipper, and placing the bread inside of it, is convenient as well as neat.

2589. **BREAD** should be cut into thick squares, the last thing after the table is laid. If cut too early it becomes dry. A tray should be provided in which there should be a further supply of bread, new, stale, and brown. For cheese pulled bread should be provided. (2647.)

2590. **CARVING-KNIVES** should "be put in edge" before the dinner commences, for nothing irritates a good carver, or perplexes a bad one, more than a knife which refuses to perform its office; and there is nothing more annoying to the company than to see the carving-knife dazing to and fro over the steel, while the dinner is getting cold, and their appetites are being exhausted by delay.

2591. **JOINTS** that require carving should be set upon dishes sufficiently large. The space of the table may be economised by setting upon small dishes those things that do not require carving.

2592. However closely the diners are compelled to sit together, **THE CARVER SHOULD HAVE PLENTY OF ROOM.**

2593. If the table is very crowded, the **VEGETABLES** may be placed upon the sideboard, and handed round by the waiters.

2594. It would save a good deal of time, and much disappointment, if **GEESSE, TURKEYS, POULTRY, SUCKING-PIGS, &c.**, were **CARVED BEFORE BEING SENT TO TABLE**; especially in those cases where the whole or the principal part of such dishes are likely to be consumed.

2595. It is best for **THE CARVER** to supply the plates, and let the waiter hand them round, instead of putting the question to each guest as to which part he prefers, and then striving to serve him with it, to the prejudice of others present.

2596. **LADIES** should be assisted before gentlemen.

2597. **WAITERS** should present dishes on the left hand; so that the diner may assist himself with his right.

2598. **WINE** should be taken after the first course; and it will be found more convenient to let the waiter serve it, than to hand the decanters round, or to allow the guests to fill for themselves.

2599. **WAITERS** should be instructed to remove whatever articles upon the table are thrown into disuse by the progress of the dinner, as soon as they are at liberty.

2600. **FINGER-GLASSES**, or glass or plated bowls, filled with rose or orange-water, slightly warm in winter, or iced in summer, should be handed round.

2601. **WHEN THE DESSERT** is served, the wine should be set upon the table, and the decanters passed round by the company.

2602. **FRIED FISH** should be divided into suitable slices, before the fire, as soon as it leaves the frying-pan.

2603. **COD'S HEAD AND SHOULDER.**—The thick part of the back is best. It should be carved in unbroken slices, and each solid slice should be accompanied by a bit of the sound from under the back-bone, or from the cheek, jaws, tongue, &c., of the head.

2604. **TURBOT.**—Strike the carver along the back-bone which runs from head to tail, and then serve square slices from the thick part, accompanying each slice with some of the gelatinous skin of the fins and thin part, which may be raised by laying the fish-slice flat.

2605. **BRILL** is served in the same manner.

2606. **JOHN DORY** is also served in the same way. The latter has a favourite piece on the cheek.

2607. **PLAICE, AND FLAT-FISH** generally, are served in the same manner.

2608. **SOLES**, when large, may be served as turbot; but when small, should be sliced across.

2609. **SALMON.**—Serve a slice of the thick with a smaller slice of the thin part. Keep the flakes of the thick part as firm as possible.

2610. **MACKEREL** should be served in pieces cut through the side when they are large. If small, they may be divided through the back-bone, and served in halves. The shoulder part is considered the best.

2611. **WHITING** are usually fried and curled. They should be cut in half down the back, and served. The shoulder-part is best.

2612. **EELS** are usually cut in slices, either for stewing or frying. The thick parts are considered best.

2613. *Remarks.*—The *rees* of mackerel, the *sound* of cod, the *head* of carp, the *cheek* of John Dory, the *liver* of cod, &c., are severally considered delicacies, though not by all persons. Trout, perch, jack, hake, haddock, gurnet, &c., are all served in a similar manner.

2614. **SADDLE OF MUTTON.**—Cut thin slices parallel with the back-bone; or slice it obliquely from the bone to the edge.

2615. **SADDLES OF PORK OR LAMB** are carved in the same manner.

2616. **HAUNCH OF MUTTON OR VENISON.**—Make an incision right across the knuckle-end, right into the bone, and set free the gravy. Then cut thin slices the whole length of

the haunch. Serve pieces of fat with slices of lean.

2617. **RUMP OR SIRLOIN OF BEEF.**—The undercut, called “the fillet,” is exceedingly tender, and it is usual to turn the joint and serve the fillet first, reserving the meat on the upper part to serve cold. From the upper part the slices may be cut either lengthways or crossways, at option.

2618. **RIBS OF BEEF** are carved in the same way as the sirloin; but there is no fillet.

2619. **ROUND OF BEEF.**—First cut away the irregular outside pieces, to obtain a good surface, and then serve thin and broad slices. Serve bits of the under fat with the lean.

2620. **BRISKET OF BEEF.**—Cut off the outside, and then serve long slices, cut the whole length of the bones.

2621. **SHOULDER OF MUTTON.**—Make a cross incision on the fore-part of the shoulder, and serve slices from both sides of the incision; then cut slices lengthways along the shoulder-blade. Cut fat slices from the round corner.

2622. **LEG OF MUTTON.**—Make an incision across the centre, and serve from the knuckle-side, or the opposite, according to choice. The knuckle-side will be generally found well done, and the opposite side under-done, for those who prefer it.

2623. **LOIN OF MUTTON.**—Cut down between the bones, into chops.

2624. **QUARTER OF LAMB.**—Lay the knife flat, and cut off the shoulder. The proper point for incision will be indicated by the position of the shoulder. A little lemon-juice may be squeezed over the divided part, and a little cayenne pepper, and the shoulder transferred to another dish, for the opposite end of the table. Next separate the **BRISKET**, or short bones, by cutting lengthways along the breast. Then serve from either part as desired.

2625. **LOIN OF VEAL** may be cut across through the thick part; or slices may be taken in the direction of the bones. Serve pieces of kidney and fat with each plate.

2626. **FILLET OF VEAL** is carved as a round of beef (2619). The browned bits of the outside are esteemed, and should be shared among the company, with bits of fat and of forcemeat from the centre.

2627. **BREAST OF VEAL** should be divided by cutting the **BRISKET**, or soft bones, the same as the brisket of lamb. When the sweetbread comes to table with the breast, a small piece should be served on each plate.

2628. **SUCKING-PIG** should be sent to table in two halves, the head divided, and one half laid at each end of the dish. The shoulders and legs should be taken off by the obvious method of laying the knife under them, and lifting the joint out. They may be served whole, or divided. The ribs are easily divided, and are considered choice.

2629. **TONGUES** are cut across, in thin slices.

2630. **CALVES' HEADS** are carved across the cheek, and pieces taken from any part that is come-at-able. The tongue and brain-sauce are served separate.

2631. **KNUCKLE OF VEAL** is carved by cutting off the outside pieces, and then obtaining good slices, and apportioning the fat to the lean, adding bits of the sinew that lie around the joint.

2632. **LEG OF PORK** is carved as a ham, but in thicker slices; when stuffed, the stuffing must be sought for under the skin at the large end.

2633. **LOIN OF PORK** is carved the same as a loin of mutton.

2634. **SPARE-RIB OF PORK** is carved by separating the chops, which should previously have been jointed. Cut as far as the joint, then return the knife to the point of the bones, and press over, to disclose the joint, which may then be relieved with the point of the knife.

2635. **HAMS** are cut in very thin slices from the knuckle to the blade.

2636. **PHEASANTS**.—Carve the breast in slices. Then take off the legs and wings as a fowl.

2637. **FOWLS**.—Fix the fork firmly

into the breast, then slip the knife under the legs, and lay it over and disjoint; then the wings in the same manner. Do the same on both sides. The smaller bones require a little practice, and it would be well to watch the operations of a good carver. When the merry-thought has been removed, which it may be by slipping the knife through at the point of the breast, and the neck-bones drawn out, the trunk may be turned over, and the knife thrust through the back bone.

2638. **PARTRIDGES** are best carved by cutting off the breast, and then dividing it. But for more economical carving, the wings may be cut with a small breast-slice attached.

2639. **WOODCOCKS** may be cut right through the centre, from head to tail. Serve with it a piece of the toast upon which it comes to table.

2640. **PIGEONS** may be carved as woodcocks, or as partridges.

2641. **SNIPES** the same as woodcocks.

2642. **TURKEY**.—Cut slices each side of the breast down to the ribs; the legs may then be removed, and the thighs divided from the drum-sticks, which are very tough; but the pinions of the wing are very good, and the white part of the wing is preferred by many to the breast. The stuffing is usually put in the breast; but when truffles, mushrooms, or oysters are put into the body, an opening must be made into it by cutting through the apron.

2643. **GOOSE**.—The apron must be cut off in a circular direction, when a glass of port wine, mixed with a tea-spoonful of mustard, may be poured into the body or not. Some of the stuffing should then be drawn out, and the neck of the goose being turned a little towards the carver, the flesh of the breast should be sliced on either side of the bone. The wings may then be taken off, then the legs. The other parts are carved the same as a fowl.

2644. **DUCKS** may be carved, when large, the same as geese; but when young, like chickens. The thigh joints,

however, lie much closer into the trunk than those of fowls.

2645. HARES should be placed with their heads to the left of the carver. Slices may be taken down the whole length of the back; the legs, which, next to the back, are considered the best eating, may then be taken off, and the flesh divided from or served upon them, after the small bones have been parted from the thighs. The shoulders, which are not much esteemed, though sometimes liked by sportsmen, may be taken off by passing the knife between the joint and the trunk. When a hare is young, the back is sometimes divided at the joints into three or four parts, after being freed from the ribs and under-skin.

2646. *Remarks.*—Sufficient general instructions are here given to enable the carver, by observation and practice, to acquit himself well. The art of carving does not consist merely in dissecting the joints sent to table, but in the judicious and economical distribution of them, and the grace and neatness with which this distribution is effected. Every dish should be sent to table properly garnished (2542), and the carver should preserve the neatness of the arrangement as much as possible.

2647. PULLED BREAD.—Take from the oven an ordinary loaf when it is about *half baked*, and with the fingers, while the bread is yet hot, dexterously pull the half-set dough into pieces of irregular shape, about the size of an egg. Don't attempt to smooth or flatten them—the rougher their shapes the better. Set upon tins, place in a very slow oven, and bake to a rich brown. This forms a deliciously crisp crust for cheese. If you do not bake at home, your baker will prepare it for you, if ordered. Pulled bread may be made in the revolving ovens (2159). It is very nice with wine instead of biscuits.

2648. YEAST.—The following has been used and approved through 38 years. For a stone of flour: into two

quarts of water put a quarter of an ounce of hops, two potatoes sliced, a table-spoonful of malt, or sugar; boil twenty minutes, strain through a sieve, let the liquor stand until milk-warm, then add a little German yeast, for a first quickening; afterwards some of this yeast will do. Let it stand in a large jar or jug till sufficiently risen. First put into an earthen bottle a part of the yeast for a future quickening; let it stand in a cool place until wanted for a fresh making. Any plain cook or housewife can easily make this yeast. Put the yeast to half or more of the flour, and two quarts of warm water; stir well; let it stand and rise; knead up with the rest of the flour, put it into or upon tins, let it stand to rise, bake, and you will have good bread.

2649. RYE AND WHEAT FLOUR, half and half, makes excellent household bread.

2650. DOGS.—The best way to keep a dog healthy is to let him have plenty of exercise, and not to over-feed him. Let them at all times have a plentiful supply of clean water, and encourage them to take to swimming, as it assists their cleanliness. When you wash them do not use a particle of soap, or you will prevent their licking themselves, and they may become habitually dirty. Properly treated, dogs should be fed only once a-day. Meat boiled for dogs, and the liquor in which it is boiled thickened with barley meal, or oatmeal, forms capital food. The distemper is liable to attack dogs from four months to four years old. It prevails most in spring and autumn. The disease is known by dullness of the eye, husky cough, shivering, loss of appetite and spirits, and fits. When fits occur, the dog will most likely die, unless a veterinary surgeon is called in. During the distemper, dogs should be allowed to run on the grass; their diet should be spare; and a little sulphur be placed in their water. Chemists who dispense cattle medicines can generally advise with sufficient safety upon the diseases of dogs, and it is

best for unskilful persons to abstain from physicking them. Hydrophobia is the most dreadful of all diseases. The first symptoms are attended by thirst, fever, and languor. The dog starts convulsively in his sleep, and when awake, though restless, is languid. When a dog is suspected, he should be firmly chained in a place where neither children nor dogs or cats can get near him. Any one going to attend him should wear thick leather gloves, and proceed with great caution. When a dog snaps savagely at an imaginary object, it is almost a certain indication of madness; and when it exhibits a terror of fluids, it is confirmed hydrophobia. Some dogs exhibit a great dislike of musical sounds, and when this is the case they are too frequently made sport of. But it is a dangerous sport, as dogs have sometimes been driven mad by it. In many diseases dogs will be benefited by warm baths. The mange is a contagious disease, which it is difficult to get rid of when once contracted. The best way is to apply to a veterinary chemist for an ointment, and to keep applying it for some time after the disease has disappeared, or it will break out again.

2651. CATS.—It is generally supposed that cats are more attached to places than to individuals, but this is an error. They obstinately cling to certain places, because it is there they expect to see the persons to whom they are attached. A cat will return to an empty house, and remain in it many weeks. But when at last she finds that the family does not return, she strays away, and if she chances then to find the family, she will abide with them. The same rules of feeding which apply to dogs apply also to cats. They should not be over-fed, nor too frequently. Cats are liable to the same diseases as dogs; though they do not become ill so frequently. A little brimstone in their milk occasionally is a good preventive. The veterinary chemist will also prescribe for the serious diseases of cats.

2652. MEDICINES — PREPARATION

OF THEM.—These directions are of the utmost value in connection with the DOMESTIC PHARMACOPOEIA (906), DISEASES (1212), PRESCRIPTIONS (1278), and POISONS (2261). *They will be found most important for emigrants, attendants upon the sick, and persons who reside out of the reach of medical aid, sailors, &c. &c. They contain instructions not only for the compounding of medicines, but most useful hints and cautions upon the application of leeches, blisters, poultices, &c.*

2653. ARTICLES REQUIRED FOR MIXING MEDICINES.—Three glass measures, one to measure ounces, another to measure drachms, and a measure for minims or small doses.

2654. A pestle and mortar of glass or Wedgwood ware, a glass funnel, and glass stirring rods.

2655. A spatula or flexible knife for spreading ointments, making pills, &c.

2656. A set of scales and weights.

2657. A small slab of marble, slate or porcelain, for making pills upon, mixing ointments, &c.

2658. MEDICINE WEIGHTS AND MEASURES.—*Weights.*—When you open your box containing the scales and weights, you will observe that there are several square pieces of brass, of different sizes and thicknesses, and stamped with a variety of characters. These are the weights, which we will now explain.

2659. Medicines are made up by troy weight, although drugs are bought by avoirdupois weight, and of course you know that there are only twelve ounces to the pound troy, which is marked  $\text{lb.}$ ; then each ounce, which contains eight drachms, is marked  $\text{ʒi.}$ ; each drachm, containing three scruples, is marked  $\text{ʒi.}$ ; and each scruple of twenty grains is marked  $\text{ʒi.}$  The grain weights are marked by little circles, each circle signifying a grain.

Besides these weights you will find others marked  $\text{ʒss}$ , which means half a scruple;  $\text{ʒss}$ , meaning half a drachm; and  $\text{ʒss}$ , meaning half an ounce. When there are

ounces, drachms, or scruples, the number of them is shown by Roman figures, thus:—i. ß. iii. iv. v., &c., and prescriptions are written so.

2660. *Measures*.—Liquid medicines are measured by the following table:—

60 minims.....	} are con- tained in	{ 1 fluid drachm ... 1 fluid ounce. ... 1 pin ... 1 gallon.
6 fluid drachms.....		
16 fluid ounces...		
8 pints.....		

and the signs which distinguish each are as follows:—*c*, means a gallon; *o*, a pint; *f*℥, a fluid ounce; *f*℥, a fluid drachm; and *℥*, a minim.

2661. Formerly drops used to be ordered, but as the size of a drop must necessarily vary, minims are always directed to be employed now, for any particular medicine, although for such medicines as oil of cloves, essence of ginger, &c., drops are frequently ordered.

2662. In order that we may measure medicines accurately, there are graduated glass vessels for measuring ounces, drachms, and minims.

2663. When proper measures are not at hand, it is necessary to adopt some other method of determining the quantities required, and therefore we have drawn up the following table for that purpose:—

A tumbler.....	} usually contains about	{ ... 10 ounces. ... 6 " ... 2 " ... 5 drachms. ... 8 " ... 1 "
A teacup.....		
A wineglass...		
A tablespoon...		
A dessertspoon...		
A teaspoon ...		

Some persons keep a medicine-glass, which is graduated so as to show the number of spoonfuls it contains.

2664. *PROCESS OF MAKING MEDICINES*.—*To Powder Substances*.—Place the substance in the mortar and strike it gently with direct perpendicular blows of the pestle, until it separates into several pieces, then remove all but a small portion, which bruise gently at first, and rub the pestle round and round the mortar, observing that the circles described by the pestle should gradually decrease in diameter, and then increase

again, because by this means every part of the powder is subjected to the process of pulverisation.

2665. Some substances require to be prepared in a particular manner before they can be powdered, or to be assisted by adding some other body. For example, camphor powders more easily when a few drops of spirits of wine are added to it; mace, nutmegs, and such oily aromatic substances are better for the addition of a little white sugar; resins and gum resins should be powdered in a cold place, and if they are intended to be dissolved, a little fine well washed white sand mixed with them assists the process of powdering. Tough roots, like gentian and columba, should be cut into thin slices; and fibrous roots, like ginger, cut slanting, otherwise the powder will be full of small fibres. Vegetable matters require to be dried before they are powdered, such as peppermint, loosestrife, senna, &c.

2666. Be careful not to pound too hard in a glass, porcelain, or Wedgewood's ware mortar; they are intended only for substances that pulverise easily, and for the purpose of mixing or incorporating medicines. Never use acids in a marble mortar, and be sure that you do not powder galls or any other astringent substances in an iron mortar.

2667. *Sifting* is frequently required for powdered substances, and this is usually done by employing a fine sieve, or tying the powder up in a piece of muslin and striking it against the left hand over a piece of paper.

2668. *Filtering* is frequently required for the purpose of obtaining clear fluids, such as infusions, eye-washes, and other medicines; and it is therefore proper that you should know how to perform the simple operation. We must first of all make the filter-paper; this is done by taking a square sheet of white blotting paper, and doubling it over, so as to form an angular cup. We next procure a piece of wire, and twist it into a form to place the funnel in, to prevent it passing too far into the neck

of the bottle. Open out the filter-paper very carefully, and having placed it in the funnel, moisten it with a little water. Then place the wire in the space between the funnel and the bottle, and pour the liquid gently down the side of the paper, otherwise the fluid is apt to burst the paper.

2669. *Maceration* is another process that is frequently required to be performed in making up medicines, and consists simply in immersing the medicines in cold water or spirits for a certain time.

2670. *Digestion* resembles maceration, except that the process is assisted by a gentle heat. The ingredients are placed in a flask, such as salad oil is sold in, which should be fitted with a plug of tow or wood, and have a piece of wire twisted round the neck. The flask is held by means of the wire over the flame of a spirit lamp, or else placed in some sand warmed in an old iron saucepan over the fire, care being taken not to place more of the flask below the sand than the portion occupied by the ingredients.

2671. *Infusion* is one of the most frequent operations required in making up medicines, its object being to extract the aromatic and volatile principles of substances that would be lost by decoction or digestion; and to extract the soluble from the insoluble parts of bodies. Infusions may be made with cold water, in which case they are weaker, but more pleasant. The general method employed consists in slicing, bruising, or powdering the ingredients first, then placing them in a common jug (which should be as globular as possible), and pouring boiling water over them; cover the jug with a cloth folded six or eight times, but if there is a lid to the jug so much the better; when the infusion has stood the time directed, hold a piece of very coarse linen over the spout, and pour the liquid through it into another jug.

2672. *Decoction*, or boiling, is employed to extract the mucilaginous or gummy parts of substances their

bitter, astringent, or other qualities, and is nothing more than boiling the ingredients in a saucepan with the lid slightly raised. Be sure never to use an iron saucepan for astringent decoctions, such as oak bark, galls, &c., as they will turn the saucepan black and spoil the decoction. The enamelled saucepans are very useful for decoctions, but an excellent plan is to put the ingredients into a jar and boil the jar, thus preparing it by a water bath, as it is technically termed.

2673. *Extracts* are made by evaporating the liquors obtained by infusion or decoction, but these can be bought much cheaper and better of chemists and druggists, and so can tinctures, confections, cerates, plasters, and syrups; but as every one is not always in the neighbourhood of druggists, we shall give recipes for those most generally useful, and the method of making them.

2674. **PRECAUTIONS TO BE OBSERVED IN GIVING MEDICINES.**—*Sex.*—Medicines for females should not be so strong as those for males, therefore it is advisable to reduce the doses about one-eighth.

2675. *Temperament.*—Persons of a phlegmatic temperament bear stimulants and purgatives better than those of a sanguine temperament, therefore the latter require smaller doses.

2676. *Habits.*—Purgatives never act so well upon persons accustomed to take them, as upon those who are not, therefore it is better to change the form of purgative from pill to potion, powder to draught, or aromatic to saline. Purgatives should never be given when there is an irritable state of the bowels.

2677. *Stimulants and narcotics* never act so quickly upon persons accustomed to use spirits freely as upon those who live abstemiously.

2678. *Climate.*—The action of medicines is modified by climate and seasons. In summer certain medicines act more powerfully than in winter, and the same person cannot bear the dose in July that he could in December.

2679. *General Health.*—Persons whose general health is good bear stronger doses than the debilitated and those who have suffered for a long time.

2680. *Idiosyncrasy.*—Walker will inform you that this long term means a peculiar temperament or disposition not common to people generally. For example, some persons cannot take calomel in the smallest dose without being salivated, or rhubarb without having convulsions; others cannot take squills, opium, senna, &c., therefore it is wrong to insist upon their taking these medicines.

2681. *Forms Best Suited for Administration.*—Fluids act quicker than solids, and powders sooner than pills.

2682. *Best Method of Preventing the Nauseous Taste of Medicines.*—Castor oil may be taken in milk, coffee, or spirit, such as brandy; but the best method of covering the nauseous flavour is to put a table-spoonful of strained orange-juice in a wine-glass, pour the castor oil into the centre of the juice, and then squeeze a few drops of lemon-juice upon the top of the oil. Cod liver oil may be taken like castor oil in orange-juice. Peppermint water almost prevents the nauseous taste of Epsom salts; a strong solution of extract of liquorice covers the disagreeable taste of aloes; milk, that of cinchona bark; and cloves that of senna.

2683. An excellent way to prevent the taste of medicines is to have the medicine in a glass, as usual, and a tumbler of water by the side of it, then take the medicine and retain it in the mouth, which should be kept closed, and if you then commence drinking the water, the taste of the medicine is washed away. Even the bitterness of quinine and aloes may be prevented by this means.

2684. *Giving Medicines to Persons.*—Medicines should be given in such a manner that the effect of the first dose should not have ceased when the next dose is given, therefore the intervals

between the doses should be regulated accordingly.

2685. *DOSES OF MEDICINE FOR DIFFERENT AGES.*—It must be plain to every one that children do not require such powerful medicine as adults or old people, and therefore it is desirable to have some fixed method of determining or regulating the administration of doses of medicine. Now, we will suppose that the dose for a full-grown person is one drachm, then the following proportions will be suitable for the various ages given; keeping in view other circumstances such as sex, temperament, habits, climate, state of general health, and idiosyncrasy.

Age.	Proportion.	Proportionate Dose.
7 weeks ....	one-fifteenth	or grains 4
7 months ...	one-twelfth	or grains 5
Under 2 years	one-eighth	or grains 7½
" 3 "	one-sixth	or grains 10
" 4 "	one-fourth	or grains 15
" 7 "	one-third	or scruple 1
" 14 "	one-half	or drachm ½
" 20 "	two-fifths	or scruples 2
above 21 "	the full dose	or drachm 1
" 65 "	The inverse	gradation

2686. *DRUGS, WITH THEIR PROPERTIES AND DOSES.*—We have arranged the various drugs according to their properties, and have given the doses of each; but in compiling this we have necessarily omitted many from each class, because they cannot be employed except by a medical man. The doses are meant for adults.

2687. Medicines have been divided into four grand classes:—1, General Stimulants; 2, Local Stimulants; 3, Chemical Remedies; 4, Mechanical Remedies.

2688. *GENERAL STIMULANTS.*—General stimulants are sub-divided into two classes, diffusible and permanent stimulants: the first comprising narcotics and anti-spasmodics, and the second tonics and astringents.

2689. *NARCOtics* are medicines which stupify and diminish the activity of the

nervous system. Given in small doses, they generally act as stimulants, but an increased dose produces a stupifying effect. Under this head we include alcohol, camphor, æther, the hop, and opium.

2690. *Alcohol*, or rectified spirit, is a very powerful stimulant, and is never used as a remedy without being diluted to the degree called proof spirit; and even then it is seldom used internally.

It is used *externally* in restraining bleeding, when there is not any vessel of importance wounded. It is also used as a lotion to burns, and is applied by dipping a piece of lint into the spirit, and laying it over the part.

Freely diluted (one part to eighteen) with water, it forms a useful eye-wash, in the last stage of ophthalmia.

Used *internally*, it acts as a very useful stimulant when diluted and taken moderately, increasing the general excitement, and giving energy to the muscular fibres; hence it becomes very useful in certain cases of debility, especially in habits disposed to create acidity; and in the low stage of low fevers.

*Dose*.—It is impossible to fix anything like a dose for this remedy, as much will depend upon the individual; but diluted with water, and sweetened with sugar, from half an ounce to two ounces may be given three or four times a-day. In cases of extreme debility, however, much will depend upon the disease.

*Caution*.—Remember that alcohol is an irritant *poison*, and that the indulgence in its use daily originates dyspepsia or indigestion, and many other serious complaints. Of all kinds of spirits, the best cordial and stomachic is *brandy*.

2691. *Camphor* is not a very steady stimulant, as its effect is transitory; but in large doses it acts as a narcotic, abating pain, and inducing sleep. In moderate doses it operates as a diaphoretic and anti-spasmodic, increasing the heat of the body, allaying irritation and spasm.

It is used *externally* as a liniment

when dissolved in oil, alcohol, or acetic acid, being employed to allay rheumatic pains; and it is also useful as an embrocation in sprains, bruises, chilblains, and, when combined with opium, it has been advantageously employed in flatulent colic and severe diarrhoea, being rubbed over the bowels.

When reduced to a fine powder, by the addition of a little spirit of wine, and friction, it is very useful as a local stimulant to indolent ulcers, especially when they discharge a foul kind of matter; a pinch is taken between the finger and thumb, and sprinkled into the ulcer, which is then dressed as usual.

When dissolved in oil of turpentine, and a few drops are placed in a hollow tooth and covered with jewellers' wool, or scraped lint, it gives almost instant relief to toothache.

Used *internally*, it is apt to excite nausea, and even vomiting, especially when given in the solid form.

As a stimulant it is of great service in all low fevers, malignant measles, malignant sore throat, and running small-pox; and when combined with opium and bark, it is extremely useful in checking the progress of malignant ulcers, and gangrene.

As a narcotic it is very useful, because it allays pain and irritation, without increasing the pulse very much.

When powdered and sprinkled upon the surface of a blister, it prevents the cantharides acting in a peculiar and painful manner upon the bladder.

Combined with senna it increases its purgative properties; and it is also used to correct the nausea produced by squills, and the irritating effects of drastic purgatives and mezereon.

*Dose*, from four grains to one scruple, repeated at short intervals when used in small doses, and long intervals when employed in large doses.

*Doses of the various preparations*.—Camphor mixture, from half an ounce to three ounces; compound tincture of camphor (*Paregoric Elixir*), from fifteen minims to one drachm.

**Caution.** When given in an over-dose it acts as a poison, producing vomiting, giddiness, delirium, convulsions, and sometimes death.

**Mode of Exhibition.**—It may be rubbed up with almond emulsion, or mucilage, or the yolk of eggs, and by this means suspended in water, or combined with chloroform as a mixture; in which form it is a valuable stimulant in cholera and other diseases. (See Mixtures.)

2692. *Ether* is a diffusible stimulant, narcotic, and anti-spasmodic. *Sulphuric Ether* is used externally both as a stimulant and a refrigerant.

In the former case its evaporation is prevented by covering a rag moistened with it with oiled silk, in order to relieve headache; and in the latter case it is allowed to evaporate, and thus produce coldness: hence it is applied over scalded surfaces by means of rags dipped in it.

As a local application, it has been found to afford almost instant relief in ear-ache, when combined with almond oil, and dropped into the ear.

*Internally* it is used as a stimulant and narcotic in low fevers and cases of great exhaustion.

**Dose,** from fifteen minims to one and a half drachm, repeated at short intervals, as its effects soon pass off. It is usually given in a little camphor julep, or water.

2693. *Nitric Ether* is a refrigerant, diuretic, and anti-spasmodic, and is well known as "*sweet spirit of nitre*."

*Used externally*, its evaporation relieves headache, and it is sometimes applied to burns.

*Internally*, it is used to relieve nausea, flatulence, and thirst in fevers; also as a diuretic.

**Dose** from ten minims to one drachm.

2694. *Compound Spirit of Sulphuric Ether* is a very useful stimulant, narcotic, and anti-spasmodic.

*Used internally* in cases of great exhaustion, attended with irritability.

**Dose**, from half a drachm to two drachms, in camphor julep. When

combined with laudanum it prevents the nauseating effects of the opium, and acts more beneficially as a narcotic.

2695. *The Hep* is a narcotic, tonic, and diuretic; it reduces the frequency of the pulse, and does not affect the head, like most anodynes.

*Used externally* it acts as an anodyne and discutient, and is useful as a fomentation for painful tumours, rheumatic pains in the joints, and severe contusions. A pillow stuffed with hops acts as a narcotic.

When the powder is mixed with lard, it acts as an anodyne dressing in painful ulcers.

**Dose**, of the *extract*, from five grains to one scruple; of the *tincture*, from half a drachm to two drachms; of the *powder*, from three grains to one scruple; of the *infusion*, half an ounce to one and a half ounces.

2696. *Opium* is a stimulant, narcotic, and anodyne.

*Used externally* it acts almost as well as when taken into the stomach, and without affecting the head or causing nausea.

Applied to irritable ulcers in the form of tincture, it promotes their cure, and allays pain.

Cloths dipped in a strong solution, and applied over painful bruises, tumours, or inflamed joints, allay pain.

A small piece of solid opium stuffed into a hollow tooth relieves toothache.

A weak solution of opium forms a valuable collyrium in ophthalmia.

Two drops of the wine of opium dropped into the eye, acts as an excellent stimulant in bloodshot eye; or after long continued inflammation, it is useful in strengthening the eye.

Applied as a liniment, in combination with ammonia and oil, or with camphorated spirit, it relieves muscular pain.

When combined with oil of turpentine, it is useful as a liniment in spasmodic colic.

*Used internally* it acts as a very powerful stimulant; then as a sedative,

and finally as an anodyne and narcotic, allaying pain in the most extraordinary manner, by acting directly upon the nervous system.

In acute rheumatism it is a most excellent medicine when combined with calomel and tartrate of antimony; but its exhibition requires the judicious care of a medical man.

*Doses of the various preparations:—*  
*Confection of opium*, from five grains to half a drachm; *extract of opium*, from one to five grains (this is a valuable form, as it does not produce so much after derangement of the nervous system as solid opium); *pills of soap and opium*, from five to ten grains; *compound ipecacuanha powder* ("Dover's Powder"), from five to twenty grains; *compound kino powder*, from five to twenty grains; *wine of opium*, from ten minims to one drachm.

*Caution.* Opium is a powerful poison when taken in too large a quantity (*See Poisons*), and therefore should be used with extreme caution. It is on this account that we have omitted some of its preparations.

2697. **ANTI-SPASMODICS** are medicines which possess the power of overcoming spasms of the muscles, or allaying any severe pain which is not attended by inflammation. The class includes a great many, but the most safe and serviceable you will find to be ammonia, assafoetida, galbanum, valerian, bark, ether, camphor, opium, and chloroform; with the minerals, oxide of zinc and calomel.

2698. *Ammonia*, or "*Volatile salt*," is an anti-spasmodic, antacid, stimulant, and diaphoretic.

*Used externally*, combined with oil, it forms a cheap and useful liniment, but it should be dissolved in *proof spirit* before the oil is added.

One part of this salt, and three parts of extract of belladonna, mixed and spread upon leather, makes an excellent plaster for relieving rheumatic pains.

As a local stimulant it is well known, as regards its effects in hysterics, faint-

ness, and lassitude, when applied to the nose as common smelling salts.

It is *used internally* as an adjunct to infusion of gentian in dyspepsia or indigestion, and in moderate doses in gout.

*Dose*, from five to twenty grains.

*Caution.* Over-doses act as a narcotic and irritant poison.

2699. *Bicarbonate of Ammonia*, *used internally* the same as the "*Volatile salt*."

*Dose*, from six to twenty-four grains.

It is frequently combined with Epsom salts.

2699.\* *Solution of Sesquicarbonate of Ammonia*, *used* the same as the "*Volatile salt*."

*Dose*, from half a drachm to one drachm, combined with some milky fluid, like almond emulsion.

2700. *Assafoetida* is an anti-spasmodic, expectorant, excitant, and anthelmintic.

*Used internally*, it is extremely useful in dyspepsia, flatulent colic, hysteria, and nervous diseases; and where there are no inflammatory symptoms, it is an excellent remedy in whooping-cough and asthma.

*Used locally* as an enema, it is useful in flatulent colic, and convulsions that come on through teething.

*Doses of various preparations:—Solid gum*, from ten to twenty grains as pills; *mixture*, from half an ounce to one ounce; *tincture*, from fifteen minims to one drachm; *ammoniated tincture*, from twenty minims to one drachm.

*Caution.* Never give it when inflammation exists.

2701. *Galbanum* is stimulant, anti-spasmodic, expectorant, and deobstruent.

*Used externally*, it assists in dispelling indolent tumours when spread upon leather as a plaster, and is useful in weakness of the legs from rickets, being applied as a plaster to the loins.

*Used internally*, it is useful in chronic or old-standing rheumatism and hysteria.

*Doses of preparations:—Of the gum*,

from ten to thirty grains as pills; tincture, from fifteen minims to one drachm. It may be made into an emulsion with mucilage and water.

2702. *Valerian* is a powerful anti-spasmodic, tonic, and excitant, acting chiefly on the nervous centres.

*Used internally*, it is employed in hysteria, nervous languor, and spasmodic complaints generally. It is useful in low fevers.

*Doses of various preparations*:—*Powder*, from ten grains to one drachm, three or four times a day; *tincture*, from two to four drachms; *ammoniated tincture*, from one to two drachms; *infusion*, from two to three ounces, or more.

2703. *Bark*, or, as it is commonly called, "Peruvian bark," is an anti-spasmodic, tonic, astringent, and stomachic.

*Used externally*, it is an excellent detergent for foul ulcers, and those that heal slowly.

*Used internally*, it is particularly valuable in intermittent fever or ague, malignant measles, dysentery, diarrhoea, intermittent rheumatism, St. Vitus' dance, indigestion, nervous affections, malignant sore throat, erysipelas; and its use is indicated in all cases of debility.

*Doses of its preparations*:—*Powder*, from five grains to two drachms, mixed in wine, water, milk, syrup, or solution of liquorice; *infusion*, from one to three ounces; *decoction*, from one to three ounces; *tincture* and *compound tincture*, each from one to three drachms.

*Caution*.—If it causes oppression at the stomach, combine it with an aromatic; if it causes vomiting, give it in wine or soda water; if it purges, give opium; and if it constipates, give rhubarb.

2704. *Sulphur* (*sulphuric*) is given internally as an anti-spasmodic in difficult breathing and spasmodic asthma; also in hysteria, cramp of the stomach, hicough, locked jaw, and cholera.

It is useful in checking sea-sickness.

*Dose*, from twenty minims to one drachm.

*Caution*.—An over-dose induces apoplectic symptoms.

2705. *Camphor* is given internally as an anti-spasmodic in hysteria, cramp in the stomach, flatulent colic, and St. Vitus' dance.

*Dose*, from two to twenty grains.

2706. *Opium* is employed internally in spasmodic affections, such as cholera, spasmodic asthma, hooping-cough, flatulent colic, and St. Vitus' dance.

*Dose*, from one-sixth of a grain to two grains of the solid opium, according to the disease.

2707. *Oxide of Zinc* is an anti-spasmodic, astringent, and tonic.

*Used externally*, as an ointment, it forms a useful astringent in affections of the eyelids, arising from relaxation, or as a powder, it is an excellent detergent for unhealthy ulcers.

*Used internally*, it has proved efficacious in St. Vitus' dance, and some other spasmodic affections.

*Dose*, from one to six grains, twice a day.

2708. *Culomet* is an anti-spasmodic alterative deobstruent, purgative, and errhine.

*Used internally*, combined with opium, it acts as an anti-spasmodic in locked jaw, cholera, and many other spasmodic affections.

As an alterative and deobstruent, it has been found useful in leprosy and itch, when combined with antimonials and guaiacum, and in enlargement of the liver and glandular affections.

It acts beneficially in diopsies, by producing watery motions.

In typhus it is of great benefit when combined with antimonials; and it may be given as a purgative in almost any disease, provided there is not any inflammation of the bowels, irritability of the system, or great debility.

*Dose*, as a deobstruent and alterative, from one to five grains, daily; as a cathartic, from five to fifteen grains; to produce pytalism or salivation, from one to two grains, in a pill, with a

quarter of a grain of opium, night and morning.

*Caution.* When taking calomel, exposure to cold or dampness should be guarded against, as such an imprudence would bring out an eruption of the skin, attended with fever. When this does occur, leave off the calomel and give bark, wine, and purgatives; take a warm bath twice a day, and powder the surface of the body with powdered starch.

2709. TONICS are given to improve the tone of the system, and restore the natural energies and general strength of the body. They consist of bark, quassia, gentian, chamomile, wormwood, and angostura bark.

2710. *Quassia* is a simple tonic, and can be used with safety by any one, as it does not increase the animal heat, or quicken the circulation.

*Used internally*, in the form of infusion, it has been found of great benefit in indigestion and nervous irritability, and is useful after bilious fevers and diarrhoea.

*Dose*, of the *infusion*, from one and a half to two ounces, three times a day.

2711. *Gentian* is an excellent tonic and stomachic; but when given in large doses, it acts as an aperient.

It is *used internally* in all cases of general debility, and, when combined with bark, is used in intermittent fevers. It has also been employed in indigestion, and it is sometimes used, combined with volatile salt, in that disease; but at other times alone, in the form of infusion.

After diarrhoea it proves a useful tonic.

*Used externally*, its infusion is sometimes applied to foul ulcers.

*Dose*, of the *infusion*, one and a half to two ounces; of the *tincture*, one to four drachms; of the *extract*, from ten to thirty grains.

2712. *Chamomile*. — The flowers of the chamomile are tonic, slightly anodyne, anti-spasmodic, and emetic.

They are *used externally* as fomenta-

tions, in colic, face-ache, and tumours, and to unhealthy ulcers.

They are *used internally* in the form of infusion, with carbonate of soda, ginger, and other stomachic remedies; in dyspepsia, flatulent colic, debility following dysentery and gout.

Warm infusion of the flowers acts as an emetic; and the powdered flowers are sometimes combined with opium or kino, and given in intermittent fevers.

*Dose*, of the *powdered* flowers, from ten grains to one drachm, twice or thrice a-day; of the *infusion*, from one to two ounces, as a tonic; three times a-day; and from six ounces to one pint, as an emetic; of the *extract*, from five to twenty grains.

2713. *Wormwood* is a tonic and anthelmintic.

It is *used externally* as a discutient and antiseptic.

It is *used internally* in long-standing cases of dyspepsia, in the form of infusion, with or without aromatics. It has also been used in intermittents.

*Dose*, of the *infusion*, from one to two ounces, three times a-day; of the *powder*, from one to two scruples.

2714. *Angostura Bark*, or *cusparia*, is a tonic and stimulant. It expels flatulence, increases the appetite, and produces a grateful warmth in the stomach.

It is *used internally* in intermittent fevers, dyspepsia, hysteria, and all cases of debility, where a stimulating tonic is desirable, particularly after bilious diarrhoea.

*Dose*, of the *powder*, from ten to thirty grains, combined with cinnamon powder, *magnesia*, or *rhubarb*; of the *extract*, from three to ten grains; of the *infusion*, from one to two ounces.

*Caution*. — It should never be given in inflammatory diseases or *menstrual* fever.

2715. ASTRINGENTS are medicines given for the purpose of diminishing excessive discharges, and to act indirectly as tonics. This class includes catechu, kino, oak bark, logwood, rose-leaves, chalk, and white vitriol.

2716. *Catechu* is a most valuable astringent.

It is used *externally*, when powdered, to promote the contraction of flabby ulcers. As a local astringent it is useful in relaxed uvula, a small piece being dissolved in the mouth; small, spotty ulcerations of the mouth and throat, and bleeding gums, and for these two affections it is used in the form of infusion to wash the parts.

It is given *internally* in diarrhoea, dysentery, and hæmorrhage from the bowels.

*Dose*, of the *infusion*, from one to three ounces; of the *tincture*, from one to four drachms; of the *powder*, from ten to thirty grains.

*Caution*.—It must not be given with soda or any alkali; nor metallic salts, albumen, or gelatine, as its property is destroyed by this combination.

2717. *Kino* is a powerful astringent.

It is used *externally* to ulcers, to give tone to them when flabby and discharging foul and thin matter.

It is used *internally* in the same diseases as catechu.

*Dose*, of the *powder*, from ten to thirty grains; of the *tincture*, from one to two drachms; of the *compound powder*, from ten to twenty grains; of the *infusion*, from a half to one and a half ounce.

*Caution*.—(See Catechu.)

2718. *Oak Bark* is an astringent and tonic.

It is used *externally*, in the form of decoction, to restrain bleeding from lacerated surfaces.

As a local astringent it is used in the form of decoction as a gargle in sore throat and relaxed uvula.

It is used *internally* in the same diseases as catechu, and when combined with aromatics and bitters, in intermittent fevers.

*Dose* of the *powder* from fifteen to thirty grains; of the *decoction* from two to eight drachms.

2719. *Logwood* is not a very satisfactory astringent.

It is used *internally* in diarrhoea, the

last stage of dysentery, and a lax state of the intestines.

*Dose* of the *extract* from ten to one drachm; of the *decoction* from one to three ounces, three or four times a day. 2720. *Rose leaves* are astringent and tonic.

They are used *internally* in spitting of blood, hæmorrhage from the stomach, intestines, &c., as a gargle for sore throat, and for the night sweats of consumption.

The infusion is frequently used as a tonic with diluted sulphuric acid (oil of vitriol), after low fevers.

*Dose* of *infusion* from two to four ounces.

2721. *Chalk*, when prepared by washing, becomes an astringent as well as antacid.

It is used *internally* in diarrhoea, in the form of mixture, and *externally* as an application to burns, scalds, and excoriations.

*Dose* of the *mixture* from one to two ounces.

2722. *White vitriol*, or sulphate of zinc, is an astringent, tonic, and emetic.

It is used *externally* as a collyrium for ophthalmia (See "Domestic Pharmacopœia, 906), and as a detergent for scrofulous ulcers, in the proportion of three grains of the salt to one ounce of water.

It is used *internally* in indigestion, and many other diseases; but it should not be given unless ordered by a medical man, as it is a poison.

2723. LOCAL STIMULANTS. — Local stimulants comprise emetics, cathartics, diuretics, diaphoretics, expectorants, sialogogues, errhines, and epispastics.

2724. Emetics are medicines given for the purpose of causing vomiting, as in cases of poisoning. They consist of ipecacuanha, chamomile, and mustard.

2725. *Ipecacuanha* is an emetic, diaphoretic, and expectorant.

It is used *internally* to excite vomiting in doses of from twenty to thirty grains of the powder, or one to one and a half ounce of the infusion, every half hour until vomiting takes place.

To make it act well and easily the patient should drink half-pint doses of warm water.

As a diaphoretic it should be given in doses of three grains, mixed with some soft substance, such as crumbs of bread, and repeated every four hours.

*Dose* of the wine from twenty minims to one drachm (as a diaphoretic); and from one drachm to one and a half ounce (as an emetic).

*Caution.*—Do not give more than the doses named above, because, although a safe emetic, yet it is an acrid-narcotic poison.

2726. *Mustard* is too well known to require describing. It is an emetic, diuretic, stimulant, and rubefacient.

It is used *externally* as a poultice, (which is made of the powder, bread-crumbs, and water; vinegar is not necessary).

In all cases where a stimulant is required, such as sore throats, rheumatic pains in the joints, cholera, cramps in the extremities, diarrhoea, and many other diseases.

When applied it should not be left on too long, as it is apt to cause ulceration of the part. From ten to thirty minutes is quite long enough.

When used *internally* as an emetic, a large tea-spoonful mixed with a tumbler of warm water generally operates quickly and safely, frequently when other emetics have failed.

In dropsy it is sometimes given in the form of whey, which is made by boiling half an ounce of the bruised seeds in a pint of milk, and straining off the curd. From three to four ounces of this is to be taken for a dose three times a day.

2727. *CATHARTICS* are divided into laxatives and purgatives. The former comprise manna, tamarinds, castor oil, sulphur, and magnesia; the latter, senna, rhubarb, jalap, colocynth, buckthorn, aloes, cream of tartar, scammony, calomel, Epsom salts, Glauber's salts, sulphate of potash, and Venice turpentine.

2728. *Manna* is a very gentle laxa-

tive, and therefore used for children and delicate persons.

*Dose* for children from one to four drachms; and for adults from one to two ounces, combined with rhubarb and cinnamon water.

2729. *Tamarinds* are generally laxative and refrigerant. As it is agreeable, this medicine will generally be eaten by children when they will not take other medicines.

*Dose* from half to one ounce.

As a refrigerant beverage in fevers it is extremely grateful.

2730. *Castor oil* is a most valuable medicine, as it generally operates quickly and mildly.

It is used *externally*, combined with citron ointment, as a topical application in common leprosy.

It is used *internally* as an ordinary purgative for infants, as a laxative for adults, and in diarrhoea and dysentery.

In colic it is very useful and safe; and also after delivery.

*Dose* for infants from forty drops to two drachms; for adults from half to one ounce and a half.

2731. *Sulphur*.—Sublimed sulphur is laxative and diaphoretic.

It is used *externally* in skin diseases, especially itch, both in the form of ointment and as a vapour-bath.

It is used *internally* in hæmorrhoids, combined with magnesia, as a laxative for children, and as a diaphoretic in rheumatism.

*Dose* from one scruple to two drachms, mixed in milk or with treacle. When combined with an equal proportion of cream of tartar it acts as a purgative.

2732. *Magnesia*.—*Calcined magnesia* possesses the same properties as the carbonate.

*Dose* from ten to thirty grains, in milk or water.

*Carbonate of magnesia* is an antacid and laxative, and is very useful for children when teething, and heartburn in adults.

*Dose* from a half to two drachms, in water or milk.

2733. *Senna* is a purgative, but is apt to gripe when given alone; therefore it is combined with some aromatic, such as cloves or ginger, and the infusion should be made with cold instead of hot water. It usually acts in about four hours, but its action should be assisted by drinking warm fluids.

*Dose* of the confection, commonly called "*lenitive electuary*," from one to three or four drachms at bedtime; of the *infusion*, from one to two ounces; of the *tincture*, from one to two drachms; of the *syrup* (used for children), from one drachm to one ounce.

*Caution*.—Do not give senna in any form except confection, in hæmorrhoids, and never in irritability of the intestines.

2734. *Rhubarb* is a purgative, astringent, and stomachic.

It is used externally in the form of powder to ulcers, to promote a healthy action.

It is given internally in diarrhoea, dyspepsia, and a debilitated state of the bowels.

Combined with a mild preparation of calomel (*cum cretâ*), it forms an excellent purgative for children.

*Dose* of the *infusion* from one to two ounces; of the *powder* from one scruple to half a drachm as a purgative, and from six to ten grains as a stomachic; of the *tincture* and *compound tincture* from one to four drachms; of the *compound pill* from ten to thirty grains.

2735. *Jalap* is a powerful cathartic and hydrogogue, and is apt to gripe.

*Dose* of the *powder* from ten to thirty grains, combined with a drop or two of aromatic oil; of the *compound powder* from fifteen to forty grains; of the *tincture*, from one to three drachms; of the *extract*, from ten to twenty grains. The watery extract is better than the alcoholic.

2736. *Colocynth* is a powerful drastic cathartic, and should never be given alone, unless ordered by a medical man, as its action is too violent for some constitutions.

*Dose* of the *extract*, from five to fifteen grains; of the *compound extract*, from five to fifteen grains.

2737. *Buckthorn* is a brisk purgative for children in the form of syrup.

*Dose* of the *syrup* from one to six drachms.

2738. *Aloe* is a purgative and cathartic in large, and tonic in smaller doses.

*Dose* of *powder* from two to ten grains, combined with soap, bitter extracts, or other purgative medicines, and given in the form of pills; of the *compound pill*, from five to twenty grains; of the *pill of aloe* and *myrrh*, from five to twenty grains; of the *tincture*, from four drachms to one ounce; of the *compound tincture*, from one to four drachms; of the *extract*, from six to ten grains; of the *compound decoction*, from four drachms to two ounces.

2739. *Cream of Tartar* is a purgative and refrigerant.

It is used internally in dropsy, especially of the belly, in doses of from one scruple to one drachm.

As a refrigerant drink it is dissolved in hot water, and sweetened with sugar, and is used in febrile diseases, care being taken not to allow it to rest too much upon the bowels.

*Dose*, as a purgative, from two to four drachms; as a *hydrogogue*, from four to six drachms, mixed with honey or treacle.

*Caution*.—Its use should be followed by tonics, especially gentian and angostura.

2740. *Scammony* is a drastic purgative, generally acting quickly and powerfully; sometimes producing nausea, and even vomiting, and being very apt to gripe.

It is used internally, to produce watery evacuations in dropsy, to remove intestinal worms, and correct the slimy motions of children.

*Dose* of the *powder* from five to sixteen grains, given in liquorice water, treacle, or honey; of the *confection* from twenty to thirty grains.

**Caution.**—Do not give it in an irritable or inflamed state of the bowels.

2741. *Epsom Salts* is a purgative and diuretic. It generally operates quickly, and therefore is extremely useful in acute diseases.

It is found to be beneficial in dyspepsia when combined with infusion of gentian and a little ginger.

It forms an excellent enema with olive oil.

**Dose** from a half to two ounces, dissolved in warm tea or water. Infusion of roses partially covers its taste and assists its action.

2742. *Glauber's Salt* is a very good purgative.

**Dose** from a half to two ounces, dissolved in warm water.

2743. *Sulphate of Potash* is a cathartic and disobstruent.

It is *used internally*, combined with aloes or rhubarb in obstructions of the bowels, and is an excellent saline purgative in dyspepsia and jaundice.

**Dose** of the *powdered salt* from ten grains to one drachm.

2744. *Venice Turpentine* is cathartic, diuretic, stimulant, and anthelmintic.

It is *used externally* as a rubefacient, and is given *internally* in flatulent colic, in tape-worm, rheumatism, and other diseases.

**Dose** as a *diuretic*, from ten drops to one drachm; as a *cathartic*, from ten to twelve drachms; as an *anthelmintic*, from one to two ounces, every eight hours, till the worm be ejected.

2745. **DIURETICS** are medicines which promote an increased secretion of urine. They consist of nitre, acetate of potassa, squills, juniper, and oil of turpentine.

2746. *Nitre* is a diuretic and refrigerant.

It is *used externally* as a detergent when dissolved in water, and as a lotion to inflamed and painful rheumatic joints.

It is given *internally* in doses of from ten grains to a drachm, or even two drachms; in spitting blood it is

given in one drachm doses with great benefit.

As a topical application it is beneficial in sore throat, a few grains being allowed to dissolve in the mouth.

2747. *Acetate of Potassa* is diuretic and cathartic.

It is given *internally* in dropsy with great benefit, in doses of from one scruple to one drachm, every three or four hours, to act as a diuretic in combination with infusion of quassia.

**Dose**, as a *cathartic*, from two to three drachms.

2748. *Squills* is diuretic and expectorant when given in small doses; and emetic and purgative when given in large doses.

It is *used internally* in dropsies, in combination with calomel and opium; in asthma, with ammoniacum; in catarrh, in the form of oxymel.

**Dose** of the *dried bulb powdered* from one to four grains every six hours; of the *compound pill*, from ten to twenty grains; of the *tincture*, from ten minims to one drachm; of the oxymel, from a half to two drachms; of the vinegar, from twenty minims to two drachms.

2749. *Juniper* is diuretic and stomachic. It is given *internally* in dropsies.

**Dose** of the *infusion* from two to three ounces every four hours; of the *oil*, from one to five minims.

2750. *Oil of Turpentine* is a diuretic, anthelmintic, and rubefacient.

It is *used externally* in flatulent colic, sprinkled over flannels dipped in hot water and wrung out dry.

It is *used internally* in the same diseases as Venice turpentine.

**Dose** from five minims to one ounce.

2751. **DIAPHORETICS** are medicines given to increase the secretion from the skin by sweating. They comprise acetate of ammonia, calomel, antimony, opium, camphor, and sarsaparilla.

2752. *Solution of Acetate of Ammonia* is a most useful diaphoretic.

It is *used externally* as a discutient, as a lotion to inflamed milk-breasts, as

an eye-wash and a lotion in scald head.

It is given *internally* to promote perspiration in febrile diseases, which it does most effectually, especially when combined with camphor mixture.

*Dose* from a half to one and a half ounce every three or four hours.

2753. *Antimony*—*Tartar emetic* is diaphoretic, emetic, expectorant, alterative, and rubefacient.

It is *used externally* as an irritant in white swellings and deep-seated inflammation, in the form of an ointment.

It is given *internally* in pleurisy, bilious fevers, and many other diseases; but its exhibition requires the skill of a medical man to watch its effects.

*Dose* from one-sixth of a grain to four grains.

*Caution.* It is a *poison*, and therefore requires great care in its administration.

2754. *Antimonial Powder* is a diaphoretic, emetic, and alterative.

It is given *internally* in febrile diseases, to produce determination to the skin; in rheumatism, when combined with opium or calomel, it is of great benefit.

*Dose* from three grains to one scruple every four hours, taking plenty of warm fluids between each dose.

2755. *Sarsaparilla* is diaphoretic, alterative, diuretic, and tonic.

It is given *internally* in cutaneous diseases, old-standing rheumatism, scrofula, and debility.

*Dose* of the *decotion*, from four to eight ounces; of the *compound decotion*, from four to eight ounces; of the *extract*, from five grains to one drachm.

2756. *EXPECTORANTS* are medicines given to promote the secretion from the windpipe, &c. They consist of antimony, ipecacuanha, squills, ammoniacum, and tolu.

2757. *Ammoniacum* is an expectorant, antispasmodic, and deobstruent.

It is *used externally* as a discutient, and is given *internally*, with great benefit, in asthma, hysteria, and chronic catarrh.

*Dose*, from ten to thirty grains.

2758. *Tolu* is an excellent expectorant, when there are no inflammatory symptoms.

It is given *internally* in asthma and chronic.

*Dose* of the *balsam*, from five to thirty grains, combined with mucilage and suspended in water; of the *tincture*, from a half to two drachms; of the *syrup*, from a half to four drachms.

2759. *SIALOGOGUES* are given to increase the flow of saliva or spittle. They consist of ginger and calomel.

2760. *Ginger* is a sialogogue, carminative, and stimulant.

It is *used internally* in flatulent colic, dyspepsia, and to prevent the griping of medicines. When chewed, it acts as a sialogogue, and is therefore useful in relaxed uvula.

*Dose*, from ten to twenty grains of the *powder*; of the *tincture*, from ten minims to one drachm.

2761. We shall pass over the class of *ERRHINES* or medicines to cause sneezing, to consider *EPISPASTICS* and *RUBEFACIENTS*; or those remedies which are applied to blister and cause redness of the surface. They consist of cantharides, ammonia, Burgundy pitch, and mustard.

2762. *Cantharides* or Spanish flies, when used internally, are diuretic and stimulant; and epispastic and rubefacient when applied externally.

*Mode of Application.*—A portion of the blistering plaster is spread with the thumb upon brown paper, linen, or leather, to the size required; its surface then *slightly* moistened with olive oil and sprinkled with camphor, and the plaster applied by a *light* bandage.

*Caution.*—If a blister is to be applied to the head, shave it at least ten hours before it is put on; and it is better to place a thin piece of gauze, wetted with vinegar, between the skin and the blister. If a distressing feeling be experienced about the bladder, give warm and copious draughts of linseed-tea, milk, or decoction of quince seeds, and apply warm fomentations of milk and water to the blistered surface.

The period required for a blister to remain on varies from eight to ten hours for adults, and from twenty minutes to two hours for children: as soon as it is removed, if the blister is not raised, apply a "spongio-piline" poultice, and it will then rise properly. When it is required to act as a rubefacient, the blister should remain on from one to three hours for adults, and from fifteen to forty minutes for children.

To dress a blister:—Cut the bag of cuticle containing the serum at the lowest part, by snipping it with the scissors, so as to form an opening like this—V; and then apply a piece of calico spread with spermaceti or some other dressing.

*Caution.* Never attempt to exhibit cantharides internally, as it is a poison, and requires extreme caution in its use even by medical men.

2768. *Burgundy pitch* is warmed and spread upon linen or leather, and applied over the chest in cases of catarrh, difficult breathing, and hooping-cough; over the loins in debility or lumbago; and over any part that it is desirable to excite a mild degree of inflammation in.

2764. **CHEMICAL REMEDIES.**—The chemical remedies comprise refrigerants, antacids, antalkalies, and escharotics.

2765. **REFRIGERANTS** are medicines given for the purpose of suppressing an unnatural heat of the body. They are Seville oranges, lemons, tamarinds, nitre, and cream of tartar.

2766. *Seville oranges*, and sweet oranges are formed into a refrigerant beverage, which is extremely grateful in febrile diseases.

The *vin* is a nice mild tonic; carminative, and stomachic.

*Dose of the tincture*, from one to four drachms; of the *infusion*, from one to two ounces.

2767. *Lemons* are used to form a refrigerant beverage, which is given to quench thirst in febrile and inflammatory diseases. *Lemon-juice* is given

with carbonate of potash (half an ounce of the juice to twenty grains of the salt), and taken, while effervescing, allays vomiting; a table-spoonful, taken occasionally, allays hysterical palpitations of the heart. It is useful in scurvy caused by eating too much salt food.

The *vin* forms a nice mild tonic and stomachic in certain forms of dyspepsia.

*Dose of the infusion* (made the same as orange-peel), from one to two ounces.

2768. **ANTACIDS** are given to correct acidity in the system. They are soda, ammonia, chalk, and magnesia.

2769. *Soda, carbonate of*, and *sescarbonate of soda*, are antacids and deobstruents. They are used internally in acidity of the stomach and dyspepsia.

*Dose* of both preparations, from ten grains to half a drachm.

2770. **ANTALKALIES** are given to neutralise an alkaline state of the system. They are citric acid, lemon-juice, and tartaric acid.

2771. *Citric acid* is used to check profuse sweating, and as a substitute for lemon-juice when it cannot be procured.

*Dose*, from ten to thirty grains.

2772. *Tartaric acid*, when largely diluted, forms an excellent refrigerant beverage and antalkali. It enters into the composition of extemporaneous soda-water.

*Dose*, from ten to thirty grains.

2773. **ESCHAROTICS** are remedies used to destroy the vitality of a part. They comprise lunar caustic, bluestone, and solution of chloride of zinc.

2774. *Bluestone*, or sulphate of copper, is used in a solution of from four to fifteen grains to the ounce of water, and applied to foul and indolent ulcers, by means of rag dipped in it, and is rubbed, in substance, on fungous growths, warts, &c., to destroy them.

*Caution.* It is a poison.

2775. *Lunar Caustic*, or *nitrate of silver*, is an excellent remedy in erysipelas when applied in solution (one drachm of the salt to one ounce of water), which should be brushed all

over the inflamed part, and for an inch beyond it. This blackens the skin, but it soon peels off.

To destroy warts, proud flesh, and unhealthy edges of ulcers, &c., it is invaluable; and as an application to bed-sores, pencilled over with a solution of the same strength, and in the same manner as for erysipelas.

*Caution.* It is a poison.

2776. *Solution of chloride of zinc*, or more commonly known as "Sir William Burnett's Disinfecting Fluid," is a valuable escharotic in destroying the parts of poisoned wounds, such as the bite of a mad dog.

It is also very useful in restoring the hair after the scalp has been attacked with ringworm; but its use requires extreme caution, as it is a powerful escharotic. In itch, diluted (one part to thirty-two) with water, it appears to answer very well.

*Caution.* It is a most powerful poison.

#### 2777. MECHANICAL REMEDIES.

—The mechanical remedies comprise anthelmintics, demulcents, diluents, and emollients.

2778. *ANTHELMINTICS* are medicines given for the purpose of expelling or destroying worms. They are cowhage, scammony, male fern root, calomel, gamboge, and turpentine.

2779. *Cowhage* is used to expel the round worm, which it does by wounding it with the fine prickles.

*Dose* of the *confection*, for a child three or four years old, a tea-spoonful early, for three mornings, followed by a dose of castor oil. (See "Domestic Pharmacopoeia," 906.)

2780. *Male Fern root* is a powerful anthelmintic and an astringent.

It is used to kill tapeworm.

*Dose*, three drachms of the powdered root mixed in a teacupful of water, to be taken in the morning while in bed, and followed by a brisk purgative two hours afterwards; or thirty drops of the ethereal tincture, to be taken early in the morning. (See "Domestic Pharmacopoeia," 906.)

2781. *Gamboge* is a powerful drastic and anthelmintic.

It is used *internally* in dropsies, and for the expulsion of tapeworm; but its use requires caution, as it is an irritant poison.

*Dose*, from two to six grains, in the form of pills, combined with colocynth, soap, rhubarb, or bread-crumbs.

2782. *DEMULCENTS* are used to diminish irritation, and soften parts by protecting them with a viscid matter. They are tragacanth, linseed, marsh-mallow, mallow, liquorice, arrowroot, isinglass, suet, wax, and almonds.

2783. *Tragacanth* is used to allay tickling cough, and lubricate abraded parts. It is usually given in the form of mucilage.

*Dose*, from ten grains to one drachm, or more.

2784. *Linseed* is emollient and demulcent.

It is used *externally*, when reduced to powder, as a poultice; and the oil combined with lime water is applied to burns and scalds.

It is used *internally* as an infusion in diarrhoea, dysentery, and irritation of the intestines after certain poisons, and in catarrh.

*Dose* of the *infusion*, as much as the patient pleases.

2785. *Marsh-mallow* is used *internally* in the same diseases as linseed.

The leaves are used *externally* as a fomentation, and the boiled roots are bruised and applied as an emollient poultice.

*Dose*, the same as linseed.

2786. *Mallow* is used *externally* as a fomentation and poultice in inflammation, and the infusion is used *internally* in dysentery, diseases of the kidneys, and the same diseases as marsh-mallow. It is also used as an enema.

The *Dose* is the same as for linseed and marsh-mallow.

2787. *Liquorice* is an agreeable demulcent, and is given in the form of decoction in catarrh, and some forms of dyspepsia; and the extract is used in catarrh.

*Dose of the extract, from ten grains to one drachm; of the decoction, from two to four ounces.*

2788. *Arrowroot*, isinglass, almonds, suet, and wax, are too well known to require descriptions. (See "Domestic Pharmacopoeia," 906, for preparations.)

2789. *DILUENTS* are chiefly watery compounds, such as weak tea, water, thin broth, gruel, &c.

2790. *EMOLLIENTS* consist of unctuous remedies, such as cerates and ointments, and any materials that combine heat with moisture. (See "Spongipiline," 2199.)

2791. *BLANCHED ALMONDS*.—Put them into cold water; and heat them slowly to scalding; then take them out and peel them quickly, throwing them into cold water as they are done. Dry them in a cloth before serving.

2792. *POUNDING ALMONDS*.—They should be dried for a few days after being blanched. Set them in a warm place, strewn singly over a dish or tin. A little powdered lump sugar will assist the pounding. They may be first chopped small, and rolled with a rolling-pin. *ALMOND PASTE* may be made in the same manner.

2793. *ANCHOVY BUTTER*.—Scrape the skin from a dozen fine anchovies, take the flesh from the bones, pound it smooth in a mortar; rub through a hair-sieve, put the anchovies into the mortar with three-quarters of a pound of fresh butter, a small quantity of cayenne, and a salt-spoonful of grated nutmeg and mace; beat together until thoroughly blended. If to serve cold, mould the butter in small shapes, and turn it out. For preservation, press the butter into jars, and keep cool.

2794. *ANCHOVY SANDWICHES* made with the above, will be found excellent.

2795. *LOBSTER BUTTER* is made in the same manner as anchovy butter. A mixture of anchovy butter and lobster butter is considered excellent.

2796. *ANCHOVY TOAST* is made by spreading anchovy butter upon bread either toasted or fried.

2797. *APRICOTS STEWED IN SYRUP*.—Wipe the down from young apricots, and stew them as gently as possible in a syrup made of four ounces of sugar to half a pint of water, boiled the usual time.

2798. *Dry Apricots*.—Take before ripe, scald in a jar put into boiling water, pare and stone them; put into a syrup of half their weight of sugar, in the proportion of half a pint of water to two lbs. of sugar; scald, and then boil until they are clear. Stand for two days in the syrup, then put into a thin candy, and scald them in it. Keep two days longer in the candy, heating them each day, and then lay them on glasses to dry.

2799. *Apricot Jelly*.—Pare the fruit thin, and stone it; weigh an equal quantity of sugar in fine powder, and strew over it. Stand one day, then boil very gently till they are clear, move them into a bowl, and pour the liquor over. The next day pour the liquor to a quart of codling-liquor; let it boil quickly till it will jelly; put the fruit into it, and boil; skim well, and put into small pots.

2800. *SWIMMING*.—Every person, male and female, should endeavour to acquire the power of swimming. The fact that the exercise is a healthful accompaniment of bathing, and that lives may be saved by it, even when least expected, is a sufficient argument for the recommendation. The art of swimming is, in fact, very easy, and those persons who take the few brief hints we are about to offer, will soon find themselves rewarded by complete success. The first consideration is not to attempt to learn to swim too soon. That is to say, you must not expect to succeed in your efforts to swim, until you have become accustomed to the water, and have overcome your repugnance to the coldness and novelty of bathing. Every attempt will fail until you have acquired a certain confidence in the water, and then the difficulty will soon vanish. When this confidence has been gained, the following hints by the

celebrated Dr. Franklin will be found all that can be required :—

2801 DR. FRANKLIN'S ADVICE TO SWIMMERS.—“The only obstacle to improvement in this necessary and life-preserving art, is fear; and it is only by overcoming this timidity that you can expect to become a master of the following acquirements. It is very common for novices in the art of swimming to make use of corks or bladders to assist in keeping the body above water: some have utterly condemned the use of them; however, they may be of service for supporting the body, while one is learning what is called the stroke, or that manner of drawing in and striking out the hands and feet, that is necessary to produce progressive motion. But you will be no swimmer till you can place confidence in the power of the water to support you; I would, therefore, advise the acquiring that confidence in the first place; especially as I have known several, who, by a little practice necessary for that purpose, have insensibly acquired the stroke, taught as it were by nature. The practice I mean is this: choosing a place where the water deepens gradually, walk coolly into it till it is up to your breast; then turn round your face to the shore, and throw an egg into the water between you and the shore; it will sink to the bottom, and be easily seen there if the water be clean. It must lie in the water so deep that you cannot reach to take it up but by diving for it. To encourage yourself, in order to do this, reflect that your progress will be from deep to shallow water, and that at any time you may, by bringing your legs under you, and standing on the bottom, raise your head far above the water; then plunge under it with your eyes open, which must be kept open before going under, as you cannot open the eyelids for the weight of water above you; throwing yourself toward the egg, and endeavouring, by the action of your hands and feet against the water, to get forward, till within reach of it. In this attempt you will find that the water buoys you up against your inclination, that it is not so easy to sink as you imagine, and that you cannot, but by active force, get down to the egg. Thus you feel the power of water to support you, and learn to confide in that power, while your endeavours to overcome it, and reach the egg, teach you the manner of acting on the water with your feet and hands, which action is afterwards used in swimming to support your head higher above the water, or to go forward through it.

2802. “I would the more earnestly press you to the trial of this method, because,

I think I shall satisfy you that your body is lighter than water, and that you might float in it a long time with your mouth free for breathing, if you would put yourself into a proper posture, and would be still, and forbear struggling; yet, till you have obtained this experimental confidence in the water, I cannot depend upon your having the necessary presence of mind to recollect the posture, and the directions I gave you relating to it. The surprise may put all out of your mind.

2803. “Though the legs, arms, and head of a human body, being solid parts, are, specifically, somewhat heavier than fresh water, as the trunk, particularly the upper part, for its hollowness, is so much lighter than water, as that the whole of the body, taken altogether, is too light to sink wholly under water, but some part will remain above, until the lungs become filled with water, which happens from drawing water to them instead of air, when a person, in the fright, attempts breathing, while the mouth and nostrils are under water.

2804. “The legs and arms are specifically lighter than salt water, and will be supported by it, so that a human body cannot sink in salt water, though the lungs were filled as above, but from the greater specific gravity of the head. Therefore, a person throwing himself on his back in salt water, and extending his arms, may easily lay so as to keep his mouth and nostrils free for breathing; and, by a small motion of his hand, may prevent turning, if he should perceive any tendency to it.

2805. “In fresh water, if a man throw himself on his back, near the surface, he cannot long continue in that situation but by proper action of his hands on the water; if he use no such action, the legs and lower part of the body will gradually sink till he come into an upright position, in which he will continue suspended, the hollow of his breast keeping the head uppermost.

2806. “But if, in this erect position, the head be kept upright above the shoulders, as when we stand on the ground, the immersion will, by the weight of that part of the head that is out of the water, reach above the mouth and nostrils, perhaps a little above the eyes, so that a man cannot long remain suspended in water, with his head in that position.

2807. “The body continuing suspended as before, and upright, if the head be leaned quite back, so that the face look upward, all the back part of the head being under water, and its weight, consequently, in a great mea-

sure supported by it, the face will remain above water quite free for breathing, will rise an inch higher every inspiration, and sink as much every expiration, but never so low as that the water may come over the mouth.

2808. If, therefore, a person unacquainted with swimming, and falling accidentally into the water, could have presence of mind sufficient to avoid struggling and plunging, and to let the body take this natural position, he might continue long safe from drowning, till, perhaps, help should come; for, as to the clothes, their additional weight when immersed is very inconsiderable, the water supporting it; though, when he comes out of the water, he will find them very heavy indeed.

2809. "But, as I said before, I would not advise you, or any one, to depend on having this presence of mind on such an occasion, but learn fairly to swim, as I wish all men were taught to do in their youth; they would, on many occasions, be the safer for having that skill; and, on many more, the happier, as free from painful apprehensions of danger, to say nothing of the enjoyment in so delightful and wholesome an exercise. Soldiers particularly should, methinks, all be taught to swim; it might be of frequent use, either in surprising an enemy or saving themselves; and if I had now boys to educate, I should prefer those schools (other things being equal) where an opportunity was afforded for acquiring so advantageous an art, which, once learned, is never forgotten.

2810. "I know by experience, that it is a great comfort to a swimmer, who has a considerable distance to go, to turn himself sometimes on his back, and to vary, in other respects, the means of procuring a progressive motion.

2811. "When he is seized with the cramp in the leg, the method of driving it away is, to give the parts affected a sudden, vigorous, and violent shock; which he may do in the air as he swims on his back.

2812. "During the great heats in summer there is no danger in bathing, however warm we may be, in rivers which have been thoroughly warmed by the sun. But to throw one's self into cold spring water, when the body has been heated by exercise in the sun, is an imprudence which may prove fatal. I once knew an instance of four young men, who, having worked at harvest in the heat of the day, with a view of refreshing themselves, plunged into a spring of cold water; two died upon the spot, a third next morning, and the fourth recovered with great difficulty. A

copious draught of cold water, in similar circumstances, is frequently attended with the same effect, in North America.

2813. "The exercise of swimming is one of the most healthy and agreeable in the world. After having swam for an hour or two in the evening, one sleeps coolly the whole night, even during the most ardent heats of summer. Perhaps the pores being cleansed, the insensible perspiration increases and occasions this coolness. It is certain that much swimming is the means of stopping diarrhoea, and even of producing a constipation. With respect to those who do not know how to swim, or who are affected with a diarrhoea at a season which does not permit them to use that exercise, a warm bath, by cleansing and purifying the skin, is found very salutary, and often effects a radical cure. I speak from my own experience, frequently repeated, and that of others to whom I have recommended this.

2814. "When I was a boy, I amused myself one day with flying a paper kite; and approaching the banks of a lake, which was near a mile broad, I tied the string to a stake, and the kite ascended to a very considerable height above the pond, while I was swimming. In a little time, being desirous of amusing myself with my kite, and enjoying at the same time the pleasure of swimming, I returned, and loosening from the stake the string with the little stick which was fastened to it, went again into the water, where I found that, lying on my back and holding the stick in my hand, I was drawn along the surface of the water in a very agreeable manner. Having then engaged another boy to carry my clothes round the pond, to a place which I pointed out to him, on the other side, I began to cross the pond with my kite, which carried me quite over without the least fatigue, and with the greatest pleasure imaginable. I was only obliged occasionally to halt a little in my course, and resist its progress, when it appeared that, by following too quick, I lowered the kite too much; by doing which occasionally I made it rise again. I have never since that time practised this singular mode of swimming, though I think it not impossible to cross, in this manner, from Dover to Calais. The packet-boat, however, is still preferable."

2815. Those who prefer the aid of belts will find it very easy and safe to make belts upon the plan explained, (2181,) and by gradually reducing the floating power of the belts from day to day, they will gain confidence, and

speedily acquire the Art of Swimming.

2816. **TAKING A HOUSE.**—Before taking a house, be careful to calculate that the rent is not too high in proportion to your means; for remember that the rent is a claim that must be paid with but little delay, and that the landlord has greater power over your property than any other creditor.

2817. Having determined the amount of rent which you can afford to pay, be careful to select the best house which can be obtained for that sum. And in making that selection let the following matters be carefully considered:—

2818. **First**—Carefully regard the healthfulness of the situation. Avoid the neighbourhood of graveyards, and of factories giving forth unhealthy vapours; avoid low and damp districts, the course of canals, and localities of reservoirs of water, gas works, &c.; make inquiries as to the drainage of the neighbourhood, and inspect the drainage and water supply of the premises. A house standing on an incline is likely to be better drained than one standing upon the summit of a hill, or on a level below a hill. Endeavour to obtain a position where the direct sunlight falls upon the house, for this is absolutely essential to health; and give preference to a house the openings of which are sheltered from the north and east winds.

2819. **Second**—Consider the distance of the house from your place of occupation; and also its relation to provision markets, and the prices that prevail in the neighbourhood.

2820. Having considered these material and leading features, examine the house in detail, carefully looking into its state of repair; notice the windows that are broken; whether the chimneys smoke; whether they have been recently swept; whether the paper on the walls is damaged, especially in the lower parts, and the corners, by the skirtings; whether the locks, bolts, handles of doors, and window-fastenings are in proper condition; make a

list of the fixtures; ascertain whether all rent and taxes were paid up by the previous tenant, and whether the party from whom you take the house is the original landlord, or his agent or tenant. And do not commit yourself by the signing of any agreement until you are satisfied upon all these points, and *see that all has been done which the landlord had undertaken.*

2821. **TAKING A SHOP OR PLACE OF BUSINESS.**—If you are about to take a place of business, you will do well to consider the following remarks:

2822. *Small Capitalists.*—Let us take the case of a person who has no intimate knowledge of any particular trade, but having a very small capital, is about to embark it in the exchange of commodities for cash, in order to obtain an honest livelihood thereby. It is clear, that unless such a person starts with proper precaution and judgment, the capital will be expended without adequate results; rent and taxes will accumulate, the stock will lie dead or become deteriorated, and loss and ruin must follow. For the least absorption acting upon a small capital will soon dry up its source; and we need not picture the trouble that will arise when the main-spring of a tradesman's success abides by him no more.

2823. *Larger Capitalists.*—The case of the larger capitalist can scarcely be considered an exception to the same rule. For it is probable that the larger capitalist, upon commencing a business, would sink more of his funds in a larger stock—would incur liability to a heavier rent; and the attendant taxes, the wages of assistants and servants, would be greater; and, therefore, if the return come not speedily, similar consequences must sooner or later ensue.

2824. *Localities.*—Large or small capitalists should, therefore, upon entering on a shop-keeping speculation, consider well the nature of the locality in which they propose to carry on trade, the number of the population, and the habits and wants of the people, and the extent to which they are already supplied with the goods which the new adventurer proposes to offer them.

2825. *New Neighbourhoods.*—There is a tendency among small capitalists to rush into new neighbourhoods, with the expectation of making an early connexion. Low rents also serve as an attraction to these localities. We

have found, however, in our experience, that the early suburban shops seldom succeed. They are generally entered upon at the very earliest moment that the state of the locality will permit—often before the house is finished the shop is tenanted, and goods exposed for sale—even while the streets are unpaved, and while the roads are as rough and uneven as country lanes. The consequence is that, as the few inhabitants of these localities have frequent communication with adjacent towns, they, as a matter of habit or of choice, supply their chief wants thereat; and the suburban shopkeeper depends principally for support upon the accidental forgetfulness of his neighbour, who omits to bring something from the cheaper and better market, or upon the changes of the weather, which may sometimes favour him by rendering a "trip to town" exceedingly undesirable.

2826. *Failures*.—"While the grass is growing the horse is starving;" and thus, while the new district is becoming peopled the funds of the small shopkeeper are gradually eaten up, and he puts up his shutters just at the time when a more cautious speculator steps in to profit by the connexion already formed, and to take advantage of the now improved condition of the locality. It seems therefore desirable for the small capitalist rather to run the risk of a more expensive rent, in a well-peopled district, than to resort to places of slow and uncertain demand; for the welfare of the small shopkeeper depends entirely upon the frequency with which his limited stock is cleared out and replaced by fresh supplies.

2827. *Precautions*.—But should the small capitalist still prefer opening in a suburban district, where competition is less severe, and rents and rates less burdensome, there are certain precautions which he will do well to observe. He should particularly guard against opening a shop to supply what may be termed the superfluities of life; for the inhabitants of suburban districts are those who, like himself, have resorted to a cheap residence for the sake of economy. Or, if this be not the case—if they are people of independent means, who prefer the "detached villa" to the town-house, squeezed up on both sides, they have the means of riding and driving to town, and will prefer choosing articles of taste and luxury from the best markets, enriched by the finest display.

2828. *Necessities or Luxuries*.—The suburban shopkeeper should, therefore, confine himself to supplying the necessities of life.

Hungry people dislike to fetch their bread from five miles off; and to bring vegetables from a long distance would evidently be a matter of considerable inconvenience. The baker, the butcher, the green-grocer, the beer-retailer, &c., are those who find their successes first established in suburban localities. And not until these are doing well, should the tailor, the shoemaker, the hatter, the draper, the hosier, and others, expect to find return for their capital and reward for their labour.

2829. *Civility*.—In larger localities, where competition abounds, the small shopkeeper frequently outstrips his more powerful rival by one element of success, which may be added to any stock without cost, but cannot be withheld without loss. That element is *civility*. It has already been spoken of elsewhere, but must be enforced here, as aiding the little means of the small shopkeeper to a wonderful degree. A kind and obliging manner carries with it an indescribable charm. It must not be a manner which indicates a mean, grovelling, time-serving spirit, but a plain, open, and agreeable demeanour, which seems to desire to oblige for the pleasure of doing so, and not for the sake of squeezing an extra penny out of a customer's pocket.

2830. *Failures of Large Shopkeepers*.—The large shopkeeper frequently grows proud of his position; there are many little civilities which customers like, but which the large shopkeeper may be too busy or unwilling to pay. He forgets that these civilities are the steps by which he rose, and that the withdrawal of them must lead to his rapid descent. These are the points upon which large traders are often weak, and where the small trader finds them vulnerable. Punctuality, cleanliness, the neat arrangement of the stock, the attractiveness of the window, the absence of all absurd puffing, the early and regular opening of the shop in the morning, and the attention paid to every one entering it—these are the secrets of the small shopkeeper's success against the influence of giant capital. They are a series of charms before which even gold itself must yield its potent influence.

2831. *Connection*.—In provincial towns "connection" has a great deal to do with the success of the shopkeeper. There are, accordingly, special cases which we are not prepared to discuss. For instance, if a shopkeeper proposed to set up a rivalry against an old-established and respectable tradesman, we should certainly feel inclined to advise him to pause in the attempt. But if he replied

that his "connections" were sufficient to support him, that might be expected to overrule our objection. Connections, however, must not be too implicitly relied upon. They are, as a general rule, more exacting and less easily satisfied than the general public. We have known many an unfortunate victim to the promises of "connections" open with the most glowing prospects, and close with the most disastrous results.

2832. Your "connection," of course, expects you to give credit.

2833. Your "connection" is surprised that you should be so importunate about your little account.

2834. Your "connection" reminds you of certain obligations that you are under.

2835. Your "connection" finds that your goods are not a bit better or cheaper than other tradesmen's.

2836. Your "connection," after a little while, finds positive disparagement against your goods upon comparing them with articles bought by a friend from another establishment.

2837. Your "connection" consequently goes over to that other establishment, too often forgetting to pay your "little account."

2838. And when you venture to remonstrate, you lose your "connection."

2839. *Integrity.*—The sole reliance of the shopkeeper should be in the integrity of his transactions, and in the civility of his demeanour. He should make it the interest and the pleasure of the customer to come to his shop. If he does this, he will find the very best "connections," and so long as he continues this system of business, they will never desert him.

2840. *Family Connections.*—It is always creditable, but not always easy, for a man to stand well with his family. However creditable it may be to stand well with one's own kindred, this relationship should never be looked upon as an element of business. It is almost certain to fail. Your shop doors should be thrown open to everybody, and you should look to the world for your support.

2841. *Religious Connections.*—Religious connections very naturally form in small towns, where the mind and habits of every man are known to his townsmen. However much this may prevail, a man should never seek to make a show of religion the means of worldly progress. If he does so, he will fail. The truth will out at some time or the other, and he will be regarded as a black sheep. And having

built up his expectations, and regulated his expenditure with certain views of support, the moment that support is withdrawn, down the whole superstructure will come. In these days of toleration a man may hold any religious opinions, if he do so becomingly. There should be no admixture of tea and theology, or of cheese and creed. The shop is the place wherein to practise the principles taught in the place of worship, but it is not the place to traffic in under the cloak of a religious reputation.

2842. *Political Connections.*—The same with politics. A good citizen will discharge his duty to his town and the state conscientiously. Let him allow to others the freedom of opinion which he claims for himself, and there are few who will seek to interfere with him. It is generally your bigot and zealot that suffer for opinion-sake, because, being dogmatical, they bring persecution upon themselves. There are proper times when we have political duties to perform; let them be discharged conscientiously. But in the place of business let not the shopkeeper weigh the opinions of other men, as he would his own wares, in brass scales. Politics is the business of the State; fair dealing is the business of the shopkeeper; and while we are the last to say that man should not recognise and discharge political duties, we do most earnestly assert that he should neither seek nor bestow custom for the promotion of party purposes.

2843. *Duties of a Shopkeeper.*—He should cheerfully render his best labour and knowledge to serve those who approach his counter, and place confidence in his transactions; make himself alike to rich and poor, but never resort to mean subterfuge and deception to gain approbation and support. He should be frugal in his expenditure, that, in deriving profits from trade, he may not trespass unduly upon the interests of others; he should so hold the balance between man and man that he should feel nothing to reprove his conscience when the day comes for him to repose from his labours and live upon the fruits of his industry. Let the public discover such a man, and they will flock around him for their own sakes.

2844. A very useful book, "The Shopkeeper's Guide" (published at half-a-crown), enlarges upon these subjects in a very able manner; and gives most useful hints to people in every department of trade.

**2345. LAWS OF LANDLORD AND TENANT.**—**LEASES.**—A lease is a conveyance of premises or lands for a specified term of years, at a yearly rent, with definite conditions as to alterations, repairs, payment of rent, forfeiture, &c. Being an instrument of much importance, it should always be drawn by a respectable attorney, who will see that all the conditions, in the interest of the lessee, are fulfilled.

**2346. PRECAUTION.**—In taking a lease the tenant's solicitor should carefully examine the covenants, or if he take an underlease, he should ascertain the covenants of the original lease, otherwise, when too late, he may find himself so restricted in his occupation that the premises may be wholly useless for his purpose, or he may be involved in perpetual difficulties and annoyances; for instance, he may find himself restricted from making alterations convenient or necessary for his trade; he may find himself compelled to rebuild or pay rent in case of fire; he may find himself subject to forfeiture of his lease or other penalty, if he should underlet or assign his interest, carry on some particular trade, &c.

**2347. COVENANTS.**—The covenants on the landlord's part are usually the granting of legal enjoyment of the premises to the lessee; the saving him harmless from all other claimants to title; and also for future assurance. On the tenant's part, they are usually to pay the rent and taxes; to keep the premises in suitable repair; and to deliver up possession when the term has expired.

**2348. RENT AND TAXES.**—The lessee covenants to pay the rent and all taxes, except the land and property taxes, which may be deducted from the rent.

**2349. ASSIGNMENTS.**—Unless there be a covenant against assignment, a lease may be assigned, that is, the whole interest of the lessee may be conveyed to another, or it may be underlet; if, therefore, it is intended that it should not, it is proper to insert a covenant to restrain the lessee from assigning or

underletting. Tenants for terms of years may assign or underlet, but tenants at will cannot.

**2350. REPAIRS.**—A tenant who covenants to keep a house in repair is not answerable for its natural decay, but is bound to keep it wind and water tight, so that it does not decay for want of cover. A lessee who covenants to pay rent and keep the premises in repair, is liable to pay the rent although the premises may be burned down.

**2351. NEGLIGENCE OF REPAIRS BY LANDLORD.**—If a landlord covenants to repair and neglects to do so, the tenant may do it and withhold so much of the rent. But it is advisable that notice thereof should be given by the tenant to the landlord, in the presence of a witness, prior to commencing the repairs.

**2352. RIGHT OF LANDLORD TO ENTER PREMISES.**—A landlord may enter upon the premises (having given previous notice), although not expressed in the lease, for the purpose of viewing the state of the property.

**2353. TERMINATION OF LEASES.**—A tenant must deliver up possession at the expiration of the term (the lease being sufficient notice) or he will continue liable to the rent as tenant by sufferance without any new contract; but if the landlord recognises such tenancy by accepting a payment of rent after the lease has expired, such acceptance will constitute a tenancy; but previous to accepting a rent the landlord may bring his ejectment without notice, for the lease having expired the tenant is a trespasser. A lease covenanted to be void, if the rent be not paid upon the day appointed, is good, unless the landlord make an entry.

**2354. MARRIED WOMEN.**—Married women (unless the power is expressly reserved them by marriage settlement), cannot grant leases; but husbands, seised in right of their wives, may grant leases for twenty-one years. If a wife is executrix, the husband and wife have the power of leasing, as in the ordinary case of husband and wife. Married

women cannot (except by special custom) take leases; if husband and wife accept a lease, she may, after his death, accept or reject it, in the same manner as an infant may, and is not bound by the covenants though she continues a tenant.

**2855. COPYHOLDERS.**—Copyholders may not grant a lease for longer than one year, unless by custom or permission of the lord, and the lease of a steward of a manor is not good, unless he is duly invested with a power for that purpose.

**2856. NOTICES.**—All notices of whatever description relating to tenancies should be in writing, and the person serving the said notice should write on the back thereof a memorandum of the date on which it was served, and should keep a copy of the said notice with a similar memorandum attached.

**2857. YEARLY TENANCIES.**—Houses are considered as let for the year, and the tenants are subject to the laws affecting annual tenancies, unless there be an agreement in writing to the contrary.

**2858. Agreement for taking a House on an Annual Tenancy.**—Memorandum of an Undertaking, entered into this \_\_\_\_\_ day of \_\_\_\_\_ 185\_\_\_\_, between R. A., of \_\_\_\_\_, and L. O., of \_\_\_\_\_, as follows:—

The said R. A. doth hereby let unto the said L. O. a dwelling-house, situate in \_\_\_\_\_, in the parish of \_\_\_\_\_, for the term of one year certain, and so on from year to year, until half a year's notice to quit be given by or to either party, at the yearly rent of \_\_\_\_\_ pounds, payable quarterly; the tenancy to commence at \_\_\_\_\_ day next.

And the said R. A. doth undertake to pay the land-tax, the property-tax, and the sewer-rate, and to keep the said house in all necessary repairs, so long as the said L. O. shall continue therein. And the said L. O. doth undertake to take the said house of R. A. for the before-mentioned term and rent, and pay all taxes, except those on land, or property, and the sewer-rate, and the other conditions aforesaid.

Witness our hands the day and year aforesaid.

Witness, G. C.

**2859. If the landlord agrees to pay**

all the rates and taxes, then a different wording of the agreement should take place, as thus:—

And the said R. A. doth undertake to pay all rates and taxes, of whatever nature or kind, chargeable on the said house and premises, and to keep the said house in all necessary repairs, so long as the said L. O. shall continue therein.

**2860. If the landlord agrees to secure the in-coming tenant from all arrears (and the tenant should see to this) due on account of rent, rates, and taxes, the indemnification should be written on a separate paper, and in something like the following terms:—**

*Indemnification against Rents, Rates, and Taxes in Arrear.*—I, R. A., landlord of a certain house and premises now about to be taken and occupied by L. O., do hereby agree to indemnify the said L. O. from the payment of any rent, taxes, or rates, in arrear, prior to the date of the day at which his said tenancy commences. As witness my hand this \_\_\_\_\_ day of \_\_\_\_\_ 185\_\_\_\_.

R. A.

Landlord of the above premises.

Witness, G. C.

**2861. Agreement for taking a House for Three Years.**—Memorandum of an agreement made the \_\_\_\_\_ day of \_\_\_\_\_, 185\_\_\_\_, between R. A., of \_\_\_\_\_, and L. O., of \_\_\_\_\_, as follows:

The said R. A. doth let unto the said L. O. a house (and garden, if any), with appurtenances, situated in \_\_\_\_\_, in the parish of \_\_\_\_\_, for three years certain. The rent to commence from \_\_\_\_\_ day next, at and under the yearly rent of \_\_\_\_\_, payable quarterly; the first payment to be at \_\_\_\_\_ day next.

The said L. O. doth agree to take the said house (and garden) of the said R. A., for the term and rent payable in manner aforesaid; and that he will, at the expiration of the term, leave the house in as good repair as he found it [wear and tear excepted]. Witness our hands,

R. A.

Witness, G. C.

L. O.

**2862. PAYMENT OF RENT.**—Rent is usually payable at the regular quarter-days, namely, Lady-day, or March 25th; Midsummer-day, or June 24th; Michaelmas-day, September 29th; and Christmas-day, December 25th. It is due at mid-day; but no proceedings for

non-payment, where the tenant remains upon the premises, can be taken till the next day.

2863. No consideration will waive the payment of the rent, should the landlord insist on demanding it. Even should the house be burnt,—blown or fall down, the tenant is still liable for rent: and the tenancy can only be voidable by the proper notice to quit, the same as if the house remained in the most perfect condition.

2864. The landlord himself is the person most proper to demand rent; he may employ another person, but if he does, he must authorise him by letter, or by power of attorney; or the demand may be objected to.

2865. When an agent has been duly authorised, a receipt from him for any subsequent rent, is a legal acquittance to the tenant, notwithstanding the landlord may have revoked the authority under which the agent acted, unless the landlord should have given the tenant notice thereof.

2866. A tender of rent should be in the current coin of the kingdom. But a tender of Bank of England notes is good, even in cases of distress.

2867. *Form of a Receipt for Rent.*—Received of Mr. R. A. the sum of ten pounds ten shillings, for a quarter's rent due at Lady-day last, for the house, No. ——— street. £10 10s. [standp] L. O.

2868. If the receipt be given by an agent, it should be signed, G. C.  
Agent for L. O., landlord of the above premises.

2869. Be careful of your last quarter's receipt for rent, for the production of that document bars all prior claim. Even when arrears have been due on former quarters, the receipt, if given for the last quarter, precludes the landlord from recovery thereof.

2870. NOTICE TO QUIT.—When either the landlord or tenant intends to terminate a tenancy, the way to proceed is by a notice to quit, which is drawn up in the two following ways:—

2871. *Form of a Notice to Quit from a Tenant to his Landlord.*—Sir,—I hereby give you notice, that on or before the ——— day of

——— next, I shall quit and deliver up possession of the house and premises I now hold of you, situate at ———, in the parish of ———, in the county of ———.

Dated the ——— day of ———, 185.  
Witness, G. C. L. O.

To Mr. R. A.

2872. *Notice from Landlord to his Tenant.*—Sir,—I hereby give you notice to quit the house and appurtenances, which you now hold of me, situate No. ———, on or before ——— next.

Dated ———, 18 .  
(Signed) R. A. (landlord.)

To Mr. L. O.

2873. An opinion is very generally entertained, however, that a quarrel's warning to quit, where the house is of small rental, is sufficient notice, but where the rent is payable quarterly, or at longer intervals, this is a mistake; for unless a special agreement is made defining the time to be given as a warning, six months' notice to quit must be given, to expire on the same day of the year upon which the tenancy commenced. Where the rent is payable weekly or monthly, the notice to quit will be good if given for the week or month, provided care be taken that it expires upon the day of the week or month of the beginning of the tenancy.

2874. *Form of Notice from a Landlord to his Tenant to Quit, or pay an increased Rent.*—To Mr. R. A., Sir,—I hereby give you notice to deliver up possession, and quit on or before ———, the [here state the house or apartment] and appurtenances, which you now hold of me, in [insert the name of street, &c.] and in default of your compliance therewith, I do and will insist on your paying me for the same, the [annual or monthly] rent of ——— an additional rental of ——— pounds per annum, [over and above the present annual rental,] rent, for such time as you shall detain the key and keep possession over the said notice,

Witness my hand, this ——— day of ——— 185.  
Witness G. C. L. O.

2874\*. If a tenant holds over, after receiving a sufficient notice to quit, in writing, he becomes liable to pay double the yearly value; if he holds over after having himself given even parole notice to quit, he is liable to pay double rent.

2875. LODGINGS AND LODGERS.

—PRECAUTIONS.—Before you take unfurnished apartments, satisfy yourself that the rent and taxes of the house are paid, for the goods of a lodger are liable to distress for arrears of these at any time while on the premises.

2876. A broker having obtained possession through the outer door, may break open any of the private doors of the lodgers, if necessary.

2877. If lodgings are taken for a certain and specified time no notice to quit is necessary.

2878. If the lodger, however, continues after the expiration of the term he becomes a regular lodger, unless there is an agreement to the contrary. If he owes rent, the housekeeper can detain his goods whilst on the premises, or distrain, as a landlord may distrain the goods of a tenant.

2879. No distinction exists between lodgers and other tenants as to the payment of their rent, or the turning them out of possession; they are also similarly circumstanced with regard to distress for rent, as householders.

2880. In case of weekly tenants, the rent should be paid weekly, for if it is once let to run a quarter, and the landlord accept it as a quarter, the tenant cannot be forced to quit without a quarter's notice.

2881. Lodgings by the year should only be taken from a person who is either proprietor of the house, or holds possession for an unexpired term of years.

2882. FURNISHED LODGINGS.—Furnished lodgings are usually let by the week, on payment of a fixed sum, part of which is considered as rent for the apartment, and part for the use of the furniture. In some instances an agreement is made for so much per week rent, and so much for the use of the furniture, and to place all moneys received to the account of the furniture, until that part of the demand shall be satisfied, as the landlord cannot distrain for the use of his furniture.

2883. Persons renting furnished apartments frequently absent them-

selves, without apprising the householder, perhaps with the rent in arrear. If there is probable reason to believe that the lodger has left, on the second week of such absence the householder may send for a police-constable, and in his presence enter the lodger's apartment and take out the latter's property, and secure it until application is made for it. He may then enter upon the possession of the apartment; and if after fourteen days' notice given by advertisement in the *London Gazette* the lodger does not pay the arrears of rent, the householder may sell the property for the money due, reserving the surplus money and such goods as it may not be necessary to sell (if any), and keeping them ready for delivery to the lodger when he shall demand them.

2884. If a person makes a verbal agreement to take lodgings at a future day, and declines to fulfil his agreement, the housekeeper has no remedy, but if he pay a deposit he partly executes an agreement, and the housekeeper has a remedy against him for not occupying the lodgings according to agreement.

2885. If a landlord enter and use apartments while his tenant is in legal possession without his consent, he forfeits his right to recover rent.

2886. If lodgings are let to an modest woman, to enable her to receive visitors of the male sex, the landlord cannot recover his rent.

2887. But if the landlord did not know the character of the woman when he let the lodgings, he may recover, but not if *after* he knew the fact he permitted her to remain as his tenant.

2888. If the woman, however, merely lodges there, and has her visitors elsewhere, her character will not affect his claim for rent.

2889. And if a lodger quits apartments without notice, the landlord can still recover his rent by action, although he has put up a bill in the window to let them.

2890. Removing goods from furnished lodgings with intent to steal, is a felony:

unlawfully pledging is a misdemeanour.

2891. Where the lodger has removed, and there are no goods whereon to make a levy, the rent becomes a debt, and can only be recovered as such, in the County Court of the district.

2892. *Agreement for Letting a Furnished House or Apartment.*—Memorandum of an Agreement made and entered into this — day of —, 186 —, between R. A. of —, of the one part, and L. O. of —, of the other part, as follows:—That the said R. A. agrees to let, and the said L. O. to take, all that messuage or tenement, (with the garden and appurtenances thereto,) situate at, &c. [or if an apartment be the subject of demise, all the entire first floor, particularly describing the other appurtenances] together with all the furniture, fixtures, and other things mentioned and comprised in the schedule hereunder written, for the space of — months, to be computed from the — day of —, at the rent of — pounds per quarter, payable quarterly, the first quarterly payment to be made on the — day of — next ensuing the date hereof. And it is further agreed, by and between the said parties, that each party shall be at liberty to determine the said tenancy, on giving to the other a quarter's notice in writing. And the said L. O. agrees, that in the determination of the tenancy, he will deliver up the said dwelling-house (or the entire first floor, &c.), together with all the fixtures and furniture as aforesaid, in as good a condition as the same now are, reasonable wear and tear thereof excepted, and shall and will replace any of the crockery and china or other utensils that shall be broken or otherwise damaged. In witness, &c.—[Here is to follow the Inventory or List of Articles referred to above.]

2893. The notices to quit are the same as 2871.

2894. **REMEDIES TO RECOVER RENT.**—Distress is the most efficient remedy to recover rent, but care should be taken that it be done legally; if the distress is illegal, the party aggrieved has a remedy by action for damages. Excessive distresses are illegal. The distrainer ought only to take sufficient to recover the rent due, and costs; if, however, the articles sell for a greater sum than is sufficient to pay these, the remainder must be returned to the

tenant, who can demand a bill of the sale, and recover the overplus, if any.

2895. A distress can be made only for rent that is due, and cannot be made until the day after, nor unless it has been demanded by the landlord or his agent. The outer door must not be broken open, for the purpose of distraining, neither can the distress be made between sun-setting and sun-rising, nor on Sunday, Good Friday, or Christmas-day, nor after the rent has been tendered to the landlord or his agent.

2896. A second distress can be made, if the value of the first is not enough to pay the rent and costs.

2897. Goods conveyed off the premises to prevent a distress, may be seized anywhere within thirty days after the removal, and if force is resorted to by the landlord, it must be in the presence of a constable; but goods removed before the rent is actually due cannot be followed, but the rent can be recovered by action as a debt in the County Court.

2898. The general rule is, that nothing can be distrained which cannot be returned in the same condition as before the distress was made.

2899. The distraining broker cannot be one of the appraisers, nor can he value the goods—such a proceeding would render the distress illegal, and the tenant could obtain damages.

2900. The persons chosen as appraisers must not be interested in the distress; also, if the person distraining was chosen one of the appraisers, the distress would be illegal.

2901. In cases of bankruptcy or insolvency, no more than one year's rent is attainable by distress, if more be due, the landlord is only entitled to come in with the rest of the creditors for the further sum due.

2902. According to 57 Geo. III. cap. 65, no person distraining for rent, shall take other charges than those in the above schedule; the party charging more can be sued for treble the amount unlawfully taken.

2903. It is generally supposed that not more than four weeks' rent can be recovered from weekly tenants, four months' rent of monthly tenants, and four quarters' rent from quarterly or annual tenants; this, however, is not the case, for the alteration of the law 7th and 8th Vic. cap. 96, sec. 18 and 67, operates only in cases of bankruptcy, or insolvency, or where the goods are already distrained.

#### 2904. EXPENSES:—

	£	s.	d.
Levy a distress - - -	0	3	0
Man in possession per day, if the rent due be under £20	0	2	6
Appraisement 6d. in the pound on the value of the goods. If above £20 - - - per day	0	3	6
Appraisement 1s. in the pound on the value of the goods.			
Expenses of advertising, &c.	0	10	0
Catalogues, sale, and commission, 1s. in the pound on the produce of the sale.			

2905. Brokers must give copies of the charges in all cases.

2906. The goods, when valued, are usually bought by the appraiser at their own valuation, and a receipt at the bottom of the inventory, witnessed by the person who swore them, is a sufficient discharge.

2907. STAMPED AGREEMENTS.—Much uncertainty having existed as to the legal nature of the agreements on paper between landlords and tenants, the following communication to the proper authorities, and their reply, will be interesting to all concerned:—

2908. To the Commissioners of Inland Revenue, Somerset House, London.—Middlesbro', Aug. 18th, 1855.—Sirs,—The seaport town of Middlesbro', in the county of York, contains about 14,000 inhabitants, and many dwelling-houses and shops are let from quarter to quarter, and from year to year, upon written memorandums of agreement, where the rents are under £20 a year; and as some difference of opinion exists respecting the proper stamp-duties to be paid on such agreements, your opinion is requested, whether the common lease-stamp for such an agreement will be sufficient, or what other stamps (if any) will such memorandums require?—Your most obedient servant, Wm. MYERS, Solicitor.

2909. Answer.—Inland Revenue, Somerset House, London, 27th August, 1855.—Sir,—The Board having had before them your letter of the 18th inst., I am directed, in reply, to state that the documents therein referred to will be chargeable with stamp-duty as leases, whether the tenancy be from quarter to quarter, or from year to year.—I am, sir, your obedient servant, THOMAS FINGLE.—W. Myers, Esq.

2910. In all cases where the law requires a stamp, whether for an agreement or a receipt, do not omit it. As the stamp laws are liable to frequent alterations, it is best to refer to the tables in the best almanacs for the year, or to make inquiries at the Stamp offices.

2911. MARRIAGES.—ARRANGEMENTS OF THE WEDDING DAY.—Wealthy people occasionally marry with SPECIAL LICENCES. Special licences are dispensations from the ordinary rule, under which marriages can only take place canonically in the parish church, or other places duly licensed for that purpose. They can only be obtained from the metropolitan or archbishop of the province, and often with no small difficulty, not being readily granted; and when obtained the fees are about £50.

2912. COMMON LICENCES enable persons of full age, or minors with consent of parents or guardians, to be married in the church of the parish in which one of them has resided for three weeks. They are procured from Doctors' Commons, or from any surrogate, at the cost of about £2. 10s.

2913. Banns must be published *three times* in the parish church, in *each place* where the persons concerned reside. The clerk is applied to on such occasions; his fee is 1s. 6d. When the marriage ceremony is over, the parties repair to the vestry, and enter their names in the parish registry. The registry is signed by the clergyman, and the witnesses present, and a certificate of the registry is given to the bridegroom. There is no charge for the certificate; and the clergyman's fee varies according to circumstances. The clerk will at all times give information thereupon:

and it is best for a friend of the bridegroom to attend to the pecuniary settlements.

2914. **MARRIAGE BY REGISTRATION.**—An Act was passed in the reign of William the Fourth, by which it was rendered legal for persons wishing to be married by a civil ceremony, to give notice of their intention to the Registrar of Marriages in their district or districts. Three weeks' notice is necessary, to give which the parties call, separately or together, at the office of the registrar, who enters their names in a book. When the time of notice has expired, it is only necessary to give the registrar an intimation on the previous day, of your intention to attend at his office on the next day, and complete the registration. The ceremony consists of merely answering a few questions, and making the declaration that you take each other to live as husband and wife. The fee amounts only to a few shillings, and in this form no wedding ring is required, though it is usually placed on in the presence of the persons assembled. The married couple receive a certificate of marriage, which is in every respect lawful.

2915. **WEDDING DRESS.**—It is impossible to lay down specific rules for dress, as fashions change, and tastes differ. The great art consists in selecting the style of dress most becoming to the person. A stout person should adopt a different style from a thin person; a tall one from a short one. Peculiarities of complexion, and form of face and figure, should be duly regarded; and in these matters there is no better course than to call in the aid of any respectable milliner and dressmaker, who will be found ready to give the best advice. The bridegroom should simply appear in full dress, and should avoid everything eccentric and broad in style. The bridesmaids should always be made aware of the bride's dress before they choose their own, which should be determined by a proper harmony with the former.

2916. **THE ORDER OF GOING TO**

**CHURCH** is as follows:—The BRIDE, accompanied by her *father*, not unfrequently her *mother*, and uniformly by a *bridesmaid*, occupies the *first carriage*. The father hands out the bride, and leads her to the altar, the mother and the bridesmaid following. After them come the other bridesmaids, attended by the groomsmen, if there are more than one.

2917. THE BRIDEGROOM occupies the *last carriage* with the principal groomsmen, an intimate friend, or brother. He follows, and stands facing the altar, with the *bride at his left hand*. The father places himself behind, with the mother, if she attends.

2918. THE CHIEF BRIDESMAID occupies a place on the *left of the bride*, to hold her gloves, and handkerchief, and flowers; her *companions* range themselves on the *left*. If any difficulties occur from forgetfulness, the vestry-woman can set everything right.

2920. Remember to *take the licence and the ring with you*. The fee to a clergyman is according to the rank and fortune of the bridegroom; the clerk expects *five shillings*, and a trifle should be given to the vestry-woman or sexton.

2921. When the ceremony is concluded, the *bride, taking the bridegroom's arm, goes into the vestry, the others following*; signatures are then affixed, and a registration made, after which the married pair enter their carriage, and proceed to the breakfast, every one else following.

2922. THE ORDER OF RETURN FROM CHURCH differs from the above only in the fact that the bride and bridegroom now ride together, the bride being on his left, and a bridesmaid, and a groomsmen, or the father of the bride, occupying the front seats of the carriage.

2923. THE WEDDING BREAKFAST having been already prepared, the wedding party return thereto. If a large party, the bride and bridegroom occupy seats in the centre of the long table, and the two extremities should be presided over by elderly relatives, if possible one from each family. Everybody

should endeavour to make the occasion as happy as possible. One of the senior members of either the bride or bridegroom's family, should, some time before the breakfast has terminated, rise, and in a brief but graceful manner, propose the "Health and happiness of the wedded pair." It is much better to drink their healths together than separately; and, after a brief interval, the bridegroom should return thanks, which he may do without hesitation, since no one looks for a speech upon such an occasion. A few words, feelingly expressed, are all that is required. The breakfast generally concludes with the departure of the happy pair upon their wedding tour.

2924. CARDS.—With regard to sending out cards, as wedding tours are more extended than in olden times, they are generally forwarded about a week or two previous to the return of the travellers. Plain silver-edged cards are now most fashionable, but questions relative to them ought to be referred to the engraver, as fashions change continually.

2925. RECEPTION.—When the married pair have returned, and the day of reception arrives, wedding-cake and wine are handed round, of which every one partakes, and each expresses some kindly wish for the newly married couple. The bride ought not to receive visitors without a mother or sister, or some friend being present, not even if her husband is at home. Gentlemen who are in professions, or have government appointments, cannot always await the arrival of visitors; when such is the case, some old friend of the family should represent him, and proffer an apology for his absence.

2926. THE WEDDING TOUR must depend upon the tastes and circumstances of the married couple. Home-loving Englishmen and women may find much to admire and enjoy without ranging abroad. Those whose time is somewhat restricted, we recommend to sojourn at Tunbridge Wells—Mount Ephraim is especially to be selected—

and from thence the most delightful excursions may be made to different parts of the country; those who like sketching, botanising, and collecting sea-weeds, will find ample opportunities for each; those who like old ruins and time-hallowed places may reach them without difficulty. Dover, Canterbury, Folkestone, and Tatwood Castle are all within reach, and what places are more deeply interesting, not only in respect of scenery, but historic associations.

2927. Cornwall and Devonshire; the Isle of Wight, &c., are each delightful to the tourist.

2928. North Wales offers a delightful excursion; the lakes of Westmereland and Cumberland also; with the magnificent scenery of the Scottish lakes and the Cave of Fingal.

2929. To those who wish for a wider range, France, Germany, Switzerland, and the Rhine offer charms which cannot be surpassed.

2930. WEDDING CAKES.—Four pounds of fine flour, well dried, four pounds of fresh butter, two pounds of loaf sugar, a quarter of a pound of mace pounded and sifted fine, the same of nutmegs. To every pound of flour add eight eggs; wash four pounds of currants, let them be well picked and dried before the fire; blanch a pound of sweet almonds, and cut them lengthwise very thin; a pound of citron, one pound of candied orange, the same of candied lemon; half a pint of brandy. When these are made ready work the butter with your hand to a cream, then beat in your sugar a quarter of an hour, beat the whites of your eggs to a very strong froth, mix them with your sugar and butter; beat your yolks half an hour at least, and mix them with your cake; then put in your flour, mace, and nutmeg, keep beating it well till your oven is ready—pour in the brandy, and beat the currants and almonds lightly in. Tie three sheets of white paper round the bottom of your hoop to keep it from running out, rub it well with butter, put in your cake, lay the sweetmeats in layers, with cake between each layer, and after it

is risen and coloured cover it with paper before your oven is stopped up; it will require three hours to bake properly.

2931. ALMOND ICEING FOR WEDDING CAKE.—Beat the whites of three eggs to a strong froth, beat a pound of Jordan almonds very fine with rose water, mix them, with the eggs, lightly together; put in by degrees a pound of common loaf-sugar in powder. When the cake is baked enough, take it out, and lay on the iceing; then put it in to brown.

2932. SUGAR ICEING FOR WEDDING CAKE.—Beat two pounds of double-refined sugar with two ounces of fine starch, sift the whole through a gauze sieve, then beat the whites of five eggs with a knife upon a pewter dish for half an hour; beat in your sugara little at a time, or it will make the eggs fall, and injure the colour; when all the sugar is put in, beat it half an hour longer, and then lay on your almond iceing, spreading it even with a knife. If put on as soon as the cake comes out of the oven it will harden by the time the cake is cold.

2933. MARRIAGES OF DISSENTERS may be solemnised at any place of worship duly licensed, and in accordance with the forms of their worship. In some cases, the service of the Church of England is read, with slight additions or modifications. The clerk of the place of worship should be applied to for information.

2934. CHRISTENINGS may be performed either in accordance with the rites of the Established Church, or of Dissenting congregations; the time of birth, and the name of every child, must also be registered. The fees paid for christenings vary with a variety of circumstances. Particulars should in each case be obtained of the clerk of the place of worship. It is usual to make a christening the occasion of festivity; but not in such a manner as to require special remark. The parents and god-parents of the child appear at church at the appointed hour. The

child is carried by the nurse. The dress of the parties attending a christening should be what may be termed demi-costume, or half costume; but the infant should be robed in the choicest manner that the circumstances will allow. It is usual for the sponsors to present the child with a gift to be preserved for its future years. Silver spoons, a silver knife and fork, a clasp-bible, a silver cup, and other such articles, are usually chosen. It is usual, also, to give a trifling present to the nurse.

2935. REGISTRATION OF BIRTHS.—The law of registration requires the parents, or occupiers of houses, in which the births happen, to register such births at the registrar's office within *six weeks* after the date thereof. For registration, within the time specified, *no charge is made*. But after the expiration of the forty-second day after the birth, a fee of *seven shillings and sixpence* must be paid. After the expiration of six months, from the date of the birth, no registration is allowed. It is therefore most important, immediately after the birth of a child, for the father, or the occupier of the house in which the birth took place, to go to the office of the deputy registrar, residing in the district, and communicate the following particulars:—

1. Date when born.
2. Name of the child.
3. Boy or girl.
4. Name of the father.
5. Name and maiden name of the mother
6. Rank or profession of the father.
7. Signature, description, and residence of the person giving the information.
8. Date of the registration.

2936. BAPTISMAL NAME.—If any child born in England whose birth has been registered, shall, within six months of such registration, have any name given to it in baptism, other than that originally registered, such baptismal name may be added to the previous registration, if, within seven days of such baptism, application be made to the registrar by whom the child was originally

registered. For this purpose a certificate of the baptism must be procured of the clergyman, for which a fee of *one shilling* must be paid. This certificate must be taken to the registrar, who will charge another fee of *one shilling* for adding the baptismal name to the original registration.

**2937. CHOICE OF NAMES.**—To choose names for children, parents should consult the list of names (140).

**2938. CHILDREN BORN AT SEA.**—If any child of an English parent shall be born at sea on board a British vessel, the captain or commanding officer shall make a minute of the particulars touching the birth of the child, and shall, on the arrival of the vessel at any part of the kingdom, or sooner by any other opportunity, send a certificate of the birth through the post-office (*for which no postage will be charged*), to the Registrar-General, General Register Office, London.

**2939. FUNERALS AND REGISTRATION OF DEATHS.**—It is always best to place the direction of a funeral under a respectable undertaker, with the precaution of obtaining his estimate for the expenses, and limiting him to them. He can best advise upon the observances to be attended to, since the style of funerals differ with the station of the deceased's family, and are further modified by the customs of particular localities, and even by religious views.

**2940. INTRAMURAL INTERMENTS.**—It is, we think, our duty to strongly advise a discontinuance of the practice of burying in towns, where every dead body contributes to the destruction of the living. It is not unlikely that ere long Acts of Parliament will compel the closing of all graveyards in populous neighbourhoods. Besides which, the new cemeteries which are now springing up in all important localities, are so economical, and so appropriate to be the long-resting places of the dead, that few people of good taste would cling to the old practice of burying in crowded churchyards in the midst of the dwellings of the living.

**2941. THE NECROPOLIS COMPANY.**—In London there has been established a Necropolis Company, for the purpose of burying the dead in a great National Mausoleum of 1,000 acres, at Woking. A funeral train leaves the Westminster station daily at 11.20. There are separate waiting rooms for the mourners. The company undertakes all the expenses of a funeral, including private grave, statuary work, &c., at the following charges:—First class funeral £21; second class funeral, £18; third class funeral, £14; or (without statuary work), fifth class funeral, £4; sixth class funeral, £3. 5s. 6d. The office is at 2, Lancaster-place, Strand, from which address full particulars will be sent upon application to the secretary, or a person from the office will attend at request, and undertake all the arrangements. There are also the Kensal Green, the Highgate, the Norwood, the Abney Park, and other cemeteries.

**2942. REGISTRATION OF DEATHS.**—The father or mother of any child that dies, or the occupier of a house in which any person may die, must, within *five days* after such death, give notice to the registrar of the district. Some person present at the death should at the same time attend and give to the registrar an account of the circumstances or causes of the death, to the best of his or her knowledge or belief. Such a person must sign his or her name, and give the place of abode at which he or she resides. The following are the particulars required:—

1. Date of death.
2. Name in full.
3. Sex and age.
4. Rank or profession.
5. Cause of death.
6. Signature, description, and residence of the person giving the information.
7. Date of the registration.

**2943. PERSONS DYING AT SEA.**—The commander of any British vessel, on board of which a death occurs at sea, must act the same as in a case of birth. (*See 2938.*)

**2944. CERTIFICATES OF DEATH.**—Every registrar must deliver to the undertaker, *without fee*, a certificate of the death, which certificate shall be delivered to the officiating minister. No dead body can be buried without such certificate, under a penalty of £10.

**2945. OBSERVANCES OF DEATHS AND FUNERALS.**—It is usual, when a death takes place, to communicate it immediately, upon mourning note paper, to every principal member of the family, and to request them to communicate the same to the more remote relatives in their circle. A subsequent note should communicate information of the day and hour at which the funeral is fixed to take place.

**2946. SPECIAL INVITATIONS** to funerals are not considered requisite to be sent to near relatives. But to friends and acquaintances such invitations should be sent.

**2947. GLOVES.**—Most persons who attend funerals will provide themselves with gloves; but it is well to have a dozen pairs, of assorted sizes, provided in case of accident. An arrangement can be made for those not used to be returned.

**2948. HATBANDS AND CLOAKS** will be provided by the undertaker.

**2950. MOURNING.**—The dressmaker will advise upon the "degree" of mourning to be worn, which must be modified according to the age of the deceased, and the relationship of the mourner. The undertaker will advise respecting the degree of mourning to be displayed upon the carriages, horses, &c.

**2951. IN GOING TO THE FUNERAL** the nearest relatives of the deceased occupy the carriages nearest the hearse. The same order prevails in returning. Only the relatives and most intimate friends of the family should return to the house after the funeral; and their visit should be as short as possible.

**2952. IN WALKING FUNERALS** it is considered a mark of respect for friends to become pall bearers. In the funerals of young persons, the pall should be

borne by their companions, wearing white gloves, and love-ribbon. It is a pretty and an affecting sight to see the pall over the coffin of a young lady borne by six of her female friends. Flowers may be placed upon the coffin, and strewed in and over the grave.

**2953. VISITS OF CONDOLENCE** after funerals should be paid by relatives within from a week to a fortnight; by friends within the second week of the fortnight; friends of less intimacy should make inquiries and leave cards.

**2954. ALL CORRESPONDENCE WITH FAMILIES IN MOURNING** should be upon black-edged paper, if from members of the family; or be upon the ordinary note-paper, but sealed with black, if from friends.

**2955. POULTRY.**—The editor of *The Gardeners' Chronicle* says, in reply to a correspondent:—It is, in our opinion, a bad thing to give fowls egg-shells. They supply nothing that is not equally furnished by lime, and especially bricklayers' rubbish, old ceilings, &c. Never do anything that has a tendency to make them eat eggs. They are apt scholars. If they find worms in a natural way they are good food, but it is a bad plan to give them by the hand-ful. The colour of a golden Poland cock is not very essential, provided it be uniform, and the spangling regular, the legs a good clear blue, and the wing well laced. The top-knot should not have too much white.

**2956. POTATOES IN BREAD.**—First place in a pancheon or paste-bowl 15 lbs. of flour near the fire to warm; take 5 lbs. of good potatoes, those of a mealy kind being preferable, peel and boil them as if for the table, mash them fine, and then mix with them as much cold water as will allow all except small lumps to pass through a coarse sieve into the flour, which will now be ready to receive them; add yeast, &c., and mix for bread in the usual way. This plan has been followed for some years, finding that bread made according to it is much superior to that made of flour only, and on this ground alone

we recommend its adoption; but in addition to that, taking the high price of flour, and moderately low price of potatoes, here is a saving of over 20 per cent., which is surely an object worth attending to, if only by those of limited means.

**2957. PREPARING SAUSAGE SKINS.**—Turn them inside out, and stretch them on a stick; wash and scrape them in several waters. When thoroughly cleansed, take them off the sticks, and soak in salt and water two or three hours before filling.

**2958. OXFORD SAUSAGES.**—Take the meat of bacon pork. To each pound of lean pork, allow one pound of lean veal, one pound of fat, part pork and part veal. Chop and beat well with a lard beater. Allow 1 lb. of bread crumbs, thyme, a little parsley, an ounce of sage leaves, chopped very small, two heads of leeks, or a little garlic, or eschalot, chopped very fine, salt, pepper, and nutmeg. To each pound allow one egg, the yolks and whites separate; beat both well, mix in the yolks, and as much of the whites as is necessary to moisten the bread, and make them.

**2959. MUTTON SAUSAGES.**—The lean of the leg is the best. Add half as much of beef suet; that is, a pound of lean and half a pound of suet (this proportion is good for all sausages). Add oysters, anchovies, chopped very fine; and add what seasoning you may choose. No herbs. These will require a little fat in the pan to fry.

**2960. BLACK HOG PUNING.**—Catch the blood of a hog; to each quart of blood put a large tea-spoonful of salt, and stir it without ceasing until it is cold. Simmer half a pint or a pint of Emden groats in a small quantity of water till tender; there must be no gruel. The best way of doing it is in a double saucepan, so that you need not put more water than will moisten them. Chop up (for one quart of blood) one pound of the inside fat of the hog, and a quarter of a pint of bread crumbs, a table-spoonful of sage, chopped fine, a tea-spoonful of thyme, three drachms

each of allspice, salt, and pepper, and a tea-cup full of cream. When the blood is cold, strain it through a sieve, and mix to it the fat, then the groats, and then the seasoning. When well mixed put it into the skin of the largest guts, well cleansed; tie it in lengths of about nine inches, and boil gently for twenty minutes. Take them out when they have boiled a few minutes, and prick.

**2961. SAVALOYS** are made of salt pork, fat and lean, with bread crumbs, pepper, and sage; they are always put in skins; boil half an hour slowly. These are eaten cold.

**2962. WORCESTER SAUSAGES** are made of beef, &c.; add allspice, and what other spices and herbs you may choose.

**2963. VEAL SAUSAGES** are made exactly as Oxford sausages, except that you add ham fat, or fat bacon; and, instead of sage, use marjoram, thyme, and parsley.

**2964. DEVIL.**—The gizzard and rump, or legs, &c., of a dressed turkey, capon, or goose, or mutton or veal kidney, scored, peppered, salted and broiled, sent up for a relish, being made very hot, has obtained the name of a "Devil."

**2965. GRILLED FOWL.**—Take the remains of cold fowls, and skin them or not, at choice, pepper and salt them, and sprinkle over them a little lemon juice, and let them stand an hour, wipe them dry, dip them into clarified butter, and then into fine bed crumbs, and broil them gently over a clear fire. A little finely-minced lean of ham or grated lemon peel, with a seasoning of cayenne, salt, and mace, mixed with the crumbs will vary this dish agreeably. When fried instead of broiled, the fowls may be dipped into yolk of egg instead of butter.

**2966. CURRIED EGGS.**—Slice two onions and fry them in butter, add a table-spoonful of curry-powder (234, 2167); let them stew in a pint of good broth till quite tender; mix a cup of cream, and thicken with arrowroot or rice flour. Simmer a few minutes, then add six or eight hard-boiled eggs cut

into slices; heat them thoroughly, but do not let them boil.

**2967. CURRIED OYSTERS.**—This receipt may be greatly modified, both in quantity and ingredients. Let a hundred of large oysters be opened into a basin without losing one drop of their liquor. Put a lump of fresh butter into a good-sized saucepan, and when it boils, add a large onion, cut into thin slices, and let it fry in the uncovered stewpan until it is of a rich brown: now add a bit more butter, and two or three table-spoonfuls of currie powder. When these ingredients are well mixed over the fire with a wooden spoon, add gradually either hot water, or broth from the stock-pot; cover the stewpan, and let the whole boil up. Meanwhile, have ready the meat of a cocoa-nut, grated or rasped fine, put this into the stewpan with a sour apple, chopped. Let the whole simmer over the fire until the apple is dissolved, and the cocoa-nut very tender; then add a cupful of strong thickening made of flour and water, and sufficient salt, as a currie will not bear being salted at table. Let this boil up for five minutes. Have ready also, a vegetable marrow, or part of one, cut into bits, and sufficiently boiled to require little or no further cooking. Put this in with a tomato or two: either of these vegetables may be omitted. Now put into the stewpan the oysters with their liquor, and the milk of the cocoa-nut, if it be perfectly sweet; stir them well with the former ingredients; let the currie stew gently for a few minutes, then throw in the strained juice of half a lemon. Stir the currie from time to time with a wooden spoon, and as soon as the oysters are done enough serve it up with a corresponding dish of rice on the opposite side of the table. The dish is considered at Madras the *ne plus ultra* of Indian cookery.

**2968. DUCKS or GEESE HASHED.**

—Cut an onion into small dice; put it into a stew pan with a bit of butter; fry it, but do not let it get any colour; put as much boiling water into the

stew-pan as will make sauce for the hash; thicken it with a little flour; cut up the duck, and put it into the sauce to warm; do not let it boil; season it with pepper and salt, and catchup.

**2969. The legs of geese, &c.,** broiled, and laid on a bed of apple sauce, are sent up for luncheon or supper.

**2970. KIDNEYS.**—Cut them through the long way, score them, sprinkle a little pepper and salt on them, and run a wire skewer through them to keep them from curling on the gridiron, so that they may be evenly broiled. Broil them over a clear fire, taking care not to prick them with the fork, turning them often till they are done; they will take about ten or twelve minutes, if the fire is brisk; or fry them in butter, and make gravy for them in the pan (after you have taken out the kidneys), by putting in a tea-spoonful of flour; as soon as it looks brown, put in as much water as will make gravy; they will take five minutes more to fry than to broil.

**2971. CARROT SOUP.**—Scrape and wash half a dozen large carrots; peel off the red outside (which is the only part used for this soup); put it into a gallon stew-pan, with one head of celery, and an onion cut into thin pieces; take two quarts of beef, veal, or mutton broth, or if you have any cold roast beef bones (or liquor in which mutton or beef has been boiled), you may make very good broth for this soup. When you have put the broth to the roots, cover the stew-pan close, and set it on a slow stove for two hours and a half, when the carrots will be soft enough (some cooks put in a tea-cupful of bread crumbs); boil for two or three minutes; rub it through a tamis, or hair-sieve, with a wooden spoon, and add as much broth as will make it a proper thickness, i. e., almost as thick as pease-soup; put it into a clean stew-pan, make it hot, season it with a water (or liquor in which meat has been boiled), and a good-sized fowl, with two or three leeks cut in pieces about an inch long, pepper and salt; boil slowly about an hour,

then put in as many more leeks, and give it three-quarters of an hour longer. This is very good made of good beef-stock, and leeks put in at twice.

**2972. SWEETBREAD.**—Trim a fine sweetbread (it cannot be too *fresh*); parboil it for five minutes, and throw it into a basin of cold water. Roast it plain—or beat up the yolk of an egg, and prepare some fine bread crumbs. When the sweetbread is cold, dry it thoroughly in a cloth; run a lark-spit or a skewer through it, and tie it on the ordinary spit; egg it with a paste-brush; powder it well with bread crumbs, and roast it.

For sauce, fried bread crumbs round it, and melted butter, with a little mushroom catchup, and lemon juice, or serve them on buttered toast, garnished with egg sauce, or with gravy. Instead of spitting them, you may put them into a tin Dutch-oven, or fry them.

**2973. SWEETBREADS PLAIN.**—Parboil and slice them as before, dry them on a clean cloth, flour them, and fry them a delicate brown; take care to drain the fat well from them, and garnish them with slices of lemon, and sprigs of chervil or parsley, or crisp parsley. Serve with sauce, and slices of ham or bacon, or forcemeat balls.

**2974. LAMB STOVE OR LAMB STEW.**—Take a lamb's head and lights; open the jaws of the head, and wash them thoroughly; put them in a pot with some beef-stock, made with three quarts of water, and two pounds of shin of beef, strained; boil very slowly for an hour; wash and string two or three good handfuls of spinach (or spinage); put it in twenty minutes before serving; add a little parsley, and one or two onions a short time before it comes off the fire; season with pepper and salt, and serve altogether in a tureen.

**2975. SCOTCH BROSE.**—This favourite Scotch dish is generally made with the liquor meat has been boiled in. Put half a pint of oatmeal into a porringer with a little salt, if there be not enough in the broth,—of which add as much as will mix it to the consistence

of hasty-pudding, or a little thicker,—lastly, take a little of the fat that swims on the broth, and put it on the crowdie, and eat it in the same way as hasty-pudding.

**2976. SCOTCH WOODCOCK.**—Three or four slices of bread, toast and butter well on both sides—nine or ten anchovies washed, scraped, and chopped fine—put them between the slices of toast,—have ready the yolks of four eggs well beaten, and half a pint of cream—which set over the fire to thicken, but not boil—then pour it over the toast, and serve it to table as hot as possible.

**2977. MARROW-BONES.**—Saw the bones even, so that they will stand steady; put a piece of paste into the ends; set them upright in a saucepan, and boil till they are done enough:—a beef marrow-bone will require from an hour and a half to two hours; serve fresh-toasted bread with them.

**2978. COLD MEAT BROILED, WITH POACHED EGGS.**—The inside of a sirloin of beef is best for this dish, or a leg of mutton. Cut the slices of even and equal thickness, and broil and brown them carefully and slightly over a clear smart fire, or in a Dutch-oven; give those slices most fire that are least done; lay them in a dish before the fire to keep hot, while you poach the eggs and mash the potatoes.

**2979.** This makes a savoury luncheon or supper. The meat should be *underdone* the first time.

**2980. PULLED TURKEY, FOWL, OR CHICKEN.**—Skin a cold chicken, fowl, or turkey; take off the fillets from the breasts, and put them into a stew-pan with the rest of the white meat and wings, side-bones, and merry-thought, with a pint of broth, a large blade of mace pounded, an eschalot minced fine, the juice of half a lemon, and a roll of the peel, some salt, and a few grains of cayenne; thicken it with flour and butter, and let it simmer for two or three minutes, till the meat is warm. In the meantime score the legs and

rump, powder them with pepper and salt, broil them nicely brown, and lay them on or round your pulled chicken. Three table-spoonfuls of good cream, or the yolks of as many eggs, will be a great improvement to it.

2981. TO DRESS COLD TURKEY, GOOSE, FOWL, DUCK, PIGEON, OR RABBIT.—Cut them in quarters, beat up an egg or two (according to the quantity you dress) with a little grated nutmeg, and pepper and salt, some parsley minced fine, and a few crumbs of bread; mix these well together, and cover the fowl, &c., with this batter: broil them, or put them in a Dutch-oven, or have ready some dripping hot in a pan, in which fry them a light brown colour; thicken a little gravy with some flour, put a large spoonful of catchup to it, lay the fry in a dish, and pour the sauce round it; garnish with slices of lemon and toasted bread.

2982. HASHED POULTRY, GAME, OR RABBIT.—Cut them into joints, put the trimmings into a stew-pan with a quart of the broth they were boiled in, and a large onion cut in four; let it boil half an hour: strain it through a sieve: then put two table-spoonfuls of flour in a basin, and mix it well by degrees with the hot broth; set it on the fire to boil up, then strain it through a fine sieve; wash out the stew-pan, lay the poultry in it, and pour the gravy on it (through a sieve); set it by the side of the fire to simmer very gently (it must not *boil*) for fifteen minutes; five minutes before you serve it up, cut the stuffing in slices, and put it in to warm, then take it out, and lay it round the edge of the dish, and put the poultry in the middle; carefully skim the fat off the gravy, then shake it round well in the stew-pan, and pour it to the hash. You may garnish the dish with bread sippets lightly toasted.

2983. ANY KIND OF CURRY.—Cut a good fowl up, skin it or not as you please, fry it nicely brown—slice two or three onions, and fry them; put the fried fowl and onions into a stew-pan with a table-spoonful of curry-pow-

der—cover it with water or veal gravy—one clove of garlic; let it stew slow for one hour, or till very tender; have ready, mixed in two or three spoonfuls of good cream, one tea-spoonful of flour. two ounces of butter, juice of a lemon, some salt; after the cream is in, it must only have one boil up, not to stew. Any spice may be added if the curry powder is not highly seasoned. With chicken, rabbit, or fish, observe the same rule.

2984. CURRY is made also with sweet-breads—breast of veal—veal cutlets—lamb—mutton or pork chops—lobster—turbot—soles—eels—oysters, &c.—(See 234). Any kind of white meat is fit for a curry.

2985. A FRIAR'S OMELETTE.—Boil a dozen apples, as for sauce; stir in a quarter of a pound of butter, and the same of white sugar; when cold, add four eggs, well beaten; put it into a baking dish thickly strewed over with crumbs of bread, so as to stick to the bottom and sides; then put in the apple mixture; strew crumbs of bread over the top; when baked, turn it out and grate loaf-sugar over it.

2986. ORDINARY OMELETTE.—Take four eggs, beat the yolks and whites together with a table-spoonful of milk, a little salt and pepper; put two ounces of butter into a frying pan to boil, and let it remain until it begins to brown; pour the batter into it, and let it remain quiet for a minute; turn up the edges of the omelette gently from the bottom of the pan with a fork; shake it, to keep it from burning at the bottom, and fry it till of a bright brown. It will not take more than five minutes frying.

2987. MISS ACTON'S OBSERVATIONS ON OMELETTES, PANCAKES, FRITTERS, &c.—There is no difficulty in making good omelettes, pancakes, or fritters; and, as they may be expeditiously prepared and served, they are often a very convenient resource when, on short notice, an addition is required to a dinner. The eggs for all of them should be well and lightly whisked; the lard for frying batter should be extremely pure in

flavour, and quite hot when the fritters are dropped in; the batter itself should be smooth as cream, and it should be briskly beaten the instant before it is used. All fried pastes should be perfectly drained from the fat before they are served, and sent to table promptly when they are ready. Eggs may be dressed in a multiplicity of ways, but are seldom more relished in any form than in a well-made and expeditiously-served omelette. This may be plain, or seasoned with minced herbs and a very little eschalot, when the last is liked, and is then called *Omelettes aux fines herbes*; or it may be mixed with minced ham or grated cheese; in any case, it should be light, thick, full-tasted, and *fried only on one side*; if turned in the pan, as it frequently is in England, it will at once be flattened and rendered tough. Should the slight rawness which is sometimes found in the middle of the inside, when the omelette is made in the French way, be objected to, a heated shovel, or a salamander, may be held over it for an instant, before it is folded on the dish. The pan for frying it should be quite small; for if it be composed of four or five eggs only, and then put into a large one, it will necessarily spread over it and be thin, which would render it more like a pancake than an omelette; the only partial remedy for this, when a pan of proper size cannot be had, is to raise the handle of it high, and to keep the opposite side close down to the fire, which will confine the eggs into a smaller space. No gravy should be poured into the dish with it, and indeed, if properly made, it will require none. Lard is preferable to butter for frying batter, as it renders it lighter; but it must not be used for omelettes.

2998 Filled with preserves of any kind, it is called a sweet omelette.

2989. BARLEY PUDDING.—Take a quarter of a pound of Scotch or pearl barley. Wash, and simmer it in a small quantity of water; pour off the water, and add milk and flavourings as for rice puddings. Beat up with sugar and nutmeg, and mix to the milk and barley in

the same way. It may be more or less rich of eggs; and with or without the addition of butter, cream, or marrow. Put it into a buttered deep dish, leaving room for six or eight ounces of currants, and an ounce of candied peel, cut up fine, with a few apples cut in small pieces. An hour will bake it.

2990. BOILED CUSTARD.—Boil half a pint of new milk, with a piece of lemon peel, two peach leaves, half a stick of cassia, a few whole allspice, four or six ounces of white sugar. Cream may be used instead of milk; beat the yolks and whites of four eggs, strain the milk through coarse muslin, or a hair sieve; then mix the eggs and milk very gradually together, and stir it well from the bottom, on the fire, till it thickens.

2991. CARROT PUDDING.—Grate a raw red carrot; mix with double the weight of bread crumbs, biscuit, or part of each: to a pound and a half put a pint of new milk or cream, or part of each, four or six ounces of clarified butter, three or four eggs well beaten, sugar to taste, a little nutmeg, and a glass of brandy; line or edge a dish with puff paste; pour in the mixture; put slices of candied lemon or orange peel on the top, and bake in a moderately hot oven.

2992. POTATOE PUDDING.—Boil mealy potatoes in their skins, according to the rule laid down, skin and mash them with a little milk, pepper, and salt: this will make a good pudding to bake under roast meat. With the addition of a bit of butter, an egg, milk, pepper, and salt, it makes an excellent batter for a meat pudding baked. Grease a baking dish; put a layer of potatoes, then a layer of meat cut in bits, and seasoned with pepper, salt, a little allspice, either with or without chopped onions; a little gravy of roast meat is a great improvement: then put another layer of potatoes, then meat, and cover with potatoes. Put a buttered paper over the top to prevent it from being burnt, and bake it an hour or an hour and a half.

2993. PANCAKES.—Make a light

batter, of eggs, flour, and milk; a little salt, nutmeg, and ginger may be added; fry in a small pan, in hot dripping or lard. Sugar and lemon should be served to eat with them. Or, when eggs are scarce, make the batter with small beer, ginger, and so forth; or water, with flour, and a very little milk, will serve, but not so well as eggs and all milk.

**2994. CREAM PANCAKES.**—Mix two eggs, well beaten, with a pint of cream, two ounces of sifted sugar, six of flour, a little nutmeg, cinnamon, and mace. Fry the pancakes thin, with a bit of butter.

**2995. RICE PANCAKES.**—Boil half a pound of ground rice to a jelly in a pint of water or milk, and keep it well stirred from the bottom to prevent its being burnt; if too thick add a little more milk; take it off the fire; stir in six or eight ounces of butter, a pint of cream, six or eight eggs well beaten, a pinch of salt, sugar and nutmeg, with as much flour as will make the batter thick enough. Fry them with lard or dripping.

**2996. FRITTERS.**—Make them of any of the batters directed for pancakes, by dropping a small quantity into the pan; or make the plainer sort, and dip pared apples, sliced and cored, into the batter, and fry them in plenty of hot lard. Currants, or sliced lemon as thin as paper, make an agreeable change. Fritters for company should be served on a folded napkin in the dish. Any sort of sweetmeat, or ripe fruit, may be made into fritters.

**2997. OYSTER FRITTERS.**—Make a batter of flour, milk, and eggs; season a very little with nutmeg. Beard the oysters, and put as many as you think proper in each fritter.

**2998. POTATOE FRITTERS.**—Boil two large potatoes, bruise them fine, beat four yolks and three whites of eggs, and add to the above one large spoonful of cream, another of sweet wine, a squeeze of lemon, and a little nutmeg. Beat this batter well half an hour. It will be extremely light. Put a good

quantity of fine lard into a stew-pan, and drop a spoonful at a time of the batter into it. Fry them; and serve as a sauce, a glass of white wine, the juice of a lemon, one dessert-spoonful of peach-leaf or almond water, and some white sugar, warmed together; not to be served in a dish.

**2999. CABINET PUDDING.**—Cut three or four muffins in two, pour over them boiling milk sufficient to cover them, cover them up until they are tender. Make a rich custard with eight eggs (only four whites), a pint of cream, a quarter of a pound of loaf sugar, an ounce of almonds, blanched and cut, lemon peel and nutmeg grated, and a glass of ratafia or brandy, and add to the soaked muffins. Butter a tin mould for boiling—for baking, a dish. Put a layer of dried cherries, greengages, apricots, or French plums; cover with the mixture, add more fruit, then the mixture, add more fruit, then the mixture, until the mould or dish is quite full. Boil an hour, and serve with wine sauce. It should not float in the water, but stand in a stew-pan, and only water enough to reach half way up the mould. If for baking, it will not take so long. Lay a puff paste round the edges of the dish.

**3000. RAGOUT OF DUCK, OR ANY KIND OF POULTRY OR GAME.**—Partly roast, then divide into joints, or pieces of a suitable size for helping at table. Set it on in a stew-pan, with a pint and a half of broth, or, if you have no broth, water, with any little trimmings of meat to enrich it; a large onion stuck with cloves, a dozen berries each of all-spice and black pepper, and the rind of half a lemon shaved thin. When it boils skim it very clean, and then let it simmer gently, with the lid close, for an hour and a half. Then strain off the liquor, and take out the limbs, which keep hot in a basin or deep dish. Rinse the stew-pan, or use a clean one, in which put two ounces of butter, and as much flour or other thickening as

will bring it to a stiff paste; add to it the gravy by degrees. Let it boil up, then add a glass of port wine, a little lemon juice, and a tea-spoonful of salt; simmer a few minutes. Put the meat in a deep dish, strain the gravy over, and garnish with sippets of toasted bread. The flavour may be varied at pleasure, by adding catchup, curry powder, or any of the flavouring tinctures, or vinegar.

### 3001. RAGOUT OF COLD VEAL.

—Either a neck, loin, or fillet of veal will furnish this excellent ragout with a very little expense or trouble. Cut the veal into handsome cutlets; put a piece of butter, or clean dripping, into a frying-pan, as soon as it is hot, flour and fry the veal of a light brown, take it out, and if you have no gravy ready, put a pint of boiling water into the frying-pan, give it a boil up for a minute, and strain it in a basin while you make some thickening in the following manner:—Put an ounce of butter into a stew-pan; as soon as it melts, mix it with as much flour as will dry it up; stir it over the fire for a few minutes, and gradually add to it the gravy you made in the frying-pan; let them simmer together for ten minutes; season it with pepper, salt, a little mace, and a wineglassful of mushroom catchup or wine; strain it through a muslin to the meat, and stew very gently till the meat is thoroughly warmed. If you have any ready boiled bacon, cut it in slices, and put it to warm with the meat.

3002. STEWED OYSTERS.—The beard or fringe is generally taken off. If this is done, set on the beards with the liquor of the oysters, and a little white gravy, rich but unseasoned; having boiled a few minutes, strain off the beards, put in the oysters, and thicken the gravy with flour and butter (an ounce of butter to half a pint of stew), a little salt, pepper, and nutmeg, or mace, a spoonful of catchup, and three of cream; some prefer a little essence of anchovy to catchup, others the juice of a lemon, others a glass of white

wine; the flavour may be varied according to taste. Simmer till the stew is thick, and the oysters warmed through, but avoid letting them boil. Lay toasted sippets at the bottom of the dish and round the edges.

3003. FRIED OYSTERS.—Large oysters are the best. Simmer for a minute or two in their own liquor; drain perfectly dry; dip in yolks of eggs, and then in bread crumbs, seasoned with nutmeg, cayenne, and salt; fry them of a light brown. They are chiefly used as garnish for fish, or for rump steaks; but, if intended to be eaten alone, make a little thick melted butter, moistened with the liquor of the oysters, and serve as sauce.

3004. JUGGED HARE.—Wash it very nicely, cut it up in pieces proper to help at table, and put them into a jugging-pot, or into a stone jar, just sufficiently large to hold it well; put in some sweet herbs, a roll or two of rind of a lemon, and a fine large onion with five cloves stuck in it; and, if you wish to preserve the flavour of the hare, a quarter of a pint of water; if you are for a ragout, a quarter of a pint of claret or port wine, and the juice of a lemon. Tie the jar down closely with a bladder, so that no steam can escape; put a little hay in the bottom of the saucepan, in which place the jar; let the water boil for about three hours—according to the age and size of the hare (take care it is not over-done, which is the general fault in all made dishes), keeping it boiling all the time, and fill up the pot as it boils away. When quite tender, strain off gravy from fat, thicken it with flour, and give it a boil up; lay the hare in a soup-dish, and pour the gravy to it. You may make a pudding the same as for roast hare, and boil it in a cloth, and when you dish up your hare, cut it in slices, or make forcemeat balls of it for garnish. For sauce, currant jelly. Or a much easier and quicker way of proceeding is the following:—Prepare the hare as for jugging; put it into a stew-pan with a

few sweet herbs, half a dozen cloves, the same of allspice and black pepper, two large onions, and a roll of lemon peel; cover it with water: when it boils, skim it clean, and let it simmer gently till tender (about two hours); then take it up with a slice, set it by a fire to keep hot while you thicken the gravy; take three ounces of butter and some flour, rub together, put in the gravy, stir it well, and let it boil about ten minutes; strain it through a sieve over the hare, and it is ready.

**3005. IRISH STEW.**—Take two pounds of potatoes; peel and slice them; cut rather more than two pounds of mutton chops, either from the loin or neck; part of the fat should be taken off; beef two pounds, six large onions sliced, a slice of ham, or lean bacon, a spoonful of pepper, and two of salt. This stew may be done in a stewpan over the fire, or in a baker's oven, or in a close covered earthen pot. First put a layer of potatoes, then a layer of meat and onions, sprinkle the seasoning, then a layer of potatoes, and again the meat and onions and seasoning; the top layer should be potatoes, and the vessel should be quite full. Then put in half a pint of good gravy, and a spoonful of mushroom catchup. Let the whole stew for an hour and a half; be very careful it does not burn.

**3006. GIBLET PIE.**—Clean geese or duck giblets; stew them in a little water with a bunch of sweet herbs, black pepper, onion, a little salt, till nearly done; let them stand till cold. If you have not enough to fill the dish, put a veal or beef steak, or two or three mutton chops, at the bottom. Put the liquor that you have stewed your giblets in into the dish; put in the giblets, and, when baked, pour into it a teacupful of cream.

**3007. VEAL PIE.**—Take some of the middle or scrag of a small neck; season it with pepper and salt, and either put to it, or not, a few pieces of lean bacon or ham. If it is wanted of a high relish, add mace, cayenne, and nutmeg, to the salt and pepper, and

also force meat and egg balls, and if you choose add truffles, morels, mushrooms, sweetbreads cut into small bits, and cocks' combs blanched, if liked. Have a rich gravy to pour in after baking: it will be very good without any of the latter additions.

**3008. LIVER SAUCE FOR FISH.**—Boil the liver of the fish, and pound it in a mortar with a little flour, stir it into some broth, or some of the liquor the fish was boiled in, or melted butter, parsley, and a few grains of cayenne, a little essence of anchovy, soy, or catchup;—give it a boil up, and rub it through a sieve: you may add a little lemon-juice, or lemon cut in dice.

**3009. RABBITS** should be kept dry and warm. Their best food is celery, parsley, and carrots; but they will eat almost any kind of vegetable, especially the dandelion, milk-thistle, &c. In spring it is recommended to give them tares. A little bran, and any kind of grain occasionally is beneficial, as too much green food is very hurtful. Care should be taken not to over-feed them. When fed upon dry food, a little skim milk will be a good drink for them. Tea-leaves, in small quantities, are said to be good for them.

**3010. GUINEA PIGS** very much resemble rabbits in their living, and may be treated nearly the same. They should be kept dry, warm, and very clean.

**3011. WHITE MICE** are fed upon bread soaked in milk; peas, oats, beans, &c., and any kind of nuts.

**3012. MONKEYS** feed upon bread, and fruit of any kind. It is bad to give them meat, except, perhaps, small bones.

**3013. PARROTS** may best be taught to talk by covering the cage at night, or rather in the evening, and then repeating to them slowly and distinctly the words they are desired to learn. They should be kept away from places where they would be liable to hear disagreeable noises, such as street cries, and the whistling and shouts of boys at play, or they will imitate them, and become

too noisy to be peaceable. Parrots may be fed upon soaked bread, biscuit, mashed potatoes, and rape seed. They are fond of nuts. Cayenne pepper, sprinkled upon a bone, and given to them occasionally, is said to be very beneficial. They should be kept very clean, and allowed a bath frequently. It would be difficult to point out modes of treatment of the diseases of parrots. When they become affected in any way, it is best to keep them warm, change their food for a time, and give them lukewarm water to bathe in.

3014. YEAST.—The following yeast has undergone the test of thirty-six years: For a stone of flour (but a greater quantity does not require so much in proportion)—into two quarts of water put a nip (a quarter of an ounce), of hops, two potatoes sliced, a tablespoonful of malt or sugar (this may be omitted, but the yeast is better with it); boil for twenty minutes, strain through a sieve, let the liquor stand till new-milk warm, then add the quickening; let it stand in a large jar or jug till sufficiently risen; first put into an earthen bottle containing a pint or two quarts, according to the size of the baking, part of the yeast for a future quickening; let it stand uncorked an hour or two, and put into a cool place till wanted for a fresh making. For a first quickening a little German yeast will do. The above is in constant use in this part of the country. Any plain cook or housewife will readily make the yeast and use it. Put the remainder of it to half or more of the flour and two quarts of warm water; stir well, let it stand to rise, knead up with the rest of the flour, put it into or upon tins, let it stand to rise, bake, and you will have good bread.—(See 396, 2160, 2648.)

3015. INDIAN CORN FLOUR AND WHEATEN BREAD.—The peculiarity of this bread consists in its being composed in part of Indian corn flour, which will be seen, by the following analysis by the late Professor Johnston, to be much richer in gluten and fatty matter than the flour of wheat, to which cir-

cumstance it owes its highly nutritive character:—

	English Fine Wheaten Flour.	Indian Corn Flour.
Water - - -	16	14
Gluten - - -	10	12
Fat - - -	2	8
Starch, &c. - -	72	66
	100	100

Take of Indian corn flour half a stone (7lb.), pour upon it four quarts of boiling water, stirring it all the time; let it stand till about new-milk warm, then mix it with a stone of fine wheaten flour, to which a quarter of a pound of salt has been previously added. Make a depression on the surface of this mixture, and pour into it two quarts of yeast, which should be thickened to the consistence of cream with some of the flour; let it stand all night; on the following morning the whole should be well kneaded and allowed to stand for three hours, then divide it into loaves, which are better baked in tins, in which they should stand for half-an-hour, then bake. Thirty-two pounds of wholesome, nutritive, and very agreeable bread will be the result. It is of importance that the flour of Indian corn should be procured, as Indian corn meal is that which is commonly met with at the shops, and the coarseness of the husk in the meal might to some persons be prejudicial.

3016. RYE AND WHEAT FLOUR, in equal quantities, make an excellent and economical bread.

3017. TO FATTEN POULTRY.—Poultry should be fattened in coops, and kept very clean. They should be furnished with gravel, but with no water. Their only food, barley-meal, mixed so thin with water, as to serve them for drink. Their thirst makes them eat more than they would, in order to extract the water that is among the food. This should not be put in troughs, but laid upon a board, which should be clean washed every time fresh food is put upon it. It is foul and heated water which is the sole cause of the pip.

**3018. CHEAP AND GOOD VINEGAR.**—To eight gallons of clear rain water, add three quarts of molasses; turn the mixture into a clean tight cask, shake it well two or three times, and add three spoonfuls of good yeast, or two yeast cakes, place the cask in a warm place, and in ten or fifteen days, add a sheet of common wrapping-paper, smeared with molasses, and torn into narrow strips, and you will have good vinegar. The paper is necessary to form the "mother," or life of the vinegar.

**3019. WASHING WITH LIME.**—Half a pound of soap; half a pound of soda; quarter of a pound of quick-lime. Cut up the soap and dissolve it in half a gallon of boiling water; pour half a gallon of boiling water over the soda; and enough boiling water over the quick-lime to cover it. The lime must be quick and fresh; if quick, it will bubble up when the hot water is poured over it. Prepare each of these in separate vessels. Put the dissolved lime and soda together, and boil them for twenty minutes. Then pour them into a jar to settle.

**AFTER HAVING MADE THE PREPARATION.**—Set aside the flannels and coloured things, as they *must not* be washed in this way. They may be washed in the usual way while the others are boiling. The night before, the collars and wristbands of shirts, the feet of stockings, &c., should be rubbed well with soap and set to soak. In the morning pour ten gallons of water into the copper, and having strained the mixture of lime and soda well, taking great care not to disturb the settlings, put it, together with the soap, into the water, and make the whole boil before putting in the clothes. A plate should be placed at the bottom of the copper to prevent the clothes from burning. Boil each lot of clothes from half an hour to an hour. Then rinse them well in cold blue water. When dry they will be beautifully white. The same water will do for *three* lots. Wash the finer things first.—(See 2179.)

**3020. BOOKS.**—A good book and a cheerful friend render the domestic hearth an earthly paradise. The first of these conditions will be possessed by those who buy the "FAMILY FRIEND" volume for 1855, of which a contemporary observes, "When the candles are lit and the curtains drawn, it is just the thing we want for a long pleasant evening." It has just come into our hands, and we unhesitatingly pronounce it to be the cheapest and most interesting miscellany that the press ever sent forth. Truly does it justify its motto, "Kindly in tone, useful in object, and moral in tendency." It amuses while it instructs, and elevates while it refines. It contains original tales, conveying touching morals through the medium of real-life incidents—careful selections—useful recipes—enigmas and convolutions—needlework patterns—with a host of other matter, which to enumerate would too far trespass on our space. The *Family Friend* is one of our oldest favourites: has been well described as a "Gentleman's Magazine, a Lady's Magazine, a Mother's Magazine, a Youth's Magazine, and a Child's Companion." It is a repertory of things pleasant and profitable, of things grave and gay, selected with remarkable good taste, and edited with much tact and judgment. It is a work capitally adapted to cheer the happy fireside of home, and to aid the development of social affection." The price, we find, is but half-a-crown, and we cordially recommend it to the attention of our readers.

[Advertisement.]

**3021.** Here is another marvel for the Household! "THE PRACTICAL HOUSEWIFE." This little work, unlike the preceding, except in price, is *entirely* confined to matters of fact in domestic affairs. Our readers may better judge of the value of this volume to matron or maid, and of the amazing variety of its contents, when we tell them there is a closely printed, and well arranged In-

dex of twenty-five pages; in short, it surpasses all other books of the kind we have ever seen; and a more appropriate gift to a newly married couple cannot be found; for its maxims and rules, if practised, will shed comfort and happiness in every dwelling where it finds a welcome. One "Critic" observes:—"So varied a collection of recipes in cookery, housekeeping, medicine, and household and domestic matters generally, we believe, does not elsewhere exist in any language; and it teaches economy as well as cooking; how to get and keep servants, as well as how to cure a cold. It should become a household handbook everywhere, for it is a true 'Encyclopædia of Domestic Economy.'" It is tastefully got up, and we perceive it has been presided over by the Editors of the *Family Friend*.

[Advertisement.]

3022. Another book for the ladies! and a charming one, too: "TREASURES IN NEEDLEWORK." Indeed, we cannot say too much for this elegant volume. It is rich within and without, and will be hailed with delight by every lady in the land. There are at least four hundred illustrations in it, with the clearest working instructions appended to them. The volume is the joint emanation of Mrs. Warren and Mrs. Pullan, two of the most eminent names connected with the Art of Needlework. More than £2,000 have been expended in the production of this book. Considering the high estimation in which the art of picturesque and useful needlework is held at the present time, we think we are doing good service to the fair portion of our readers, by introducing this book to their notice, as being evidently well calculated to add to the recreations and employments of home. Gentlemen who wish to be magnanimous at a gift-making season, and want a present for wife, sister, or sweetheart,—this is the veritable book. Most cordially can we endorse the following encomium of an eminent contemporary:—"Knitting,

netting, crochet, point-lace, tatting, braiding, embroidery, in gold, silver and precious stones!—which of our fair countrywomen will fail to bless the industry, the ingenuity, the taste displayed by Mesdames Warren and Pullan in garnering such an accumulation of treasures, which vies externally with the bright descriptions of some of its contents in resplendent blue and gold? From the simple and comfortable knitted stocking to the most elaborate *col mousquetaire*, patterns, and explanations of patterns are given, suiting in turn those ladies whose tastes are simple, and those whom ambition or nimbleness of finger leads to essay great achievements. A more beautiful collection of patterns could not, in truth, be found. To ladies of every rank we can conscientiously recommend this volume of delicate device and feminine gracefulness, as well deserving their patronage. How a book like this, abounding in exquisite illustrations, and blazing with gold on its title, frontispiece, covers, and edges, can be sold for 8s. 6d. is a marvel that must be referred to that astonishing enterprise among modern publishers, which has done so much to cheapen literature, and place good books within reach of the humblest means."
